1 Introduction

On behalf of Ford Motor Company (Ford), Arcadis of Michigan, LLC (Arcadis) has prepared this summary report for the additional vapor intrusion investigation activities completed at the request of the Michigan Department of Environment, Great Lakes, and Energy (EGLE) to address volatile organic compounds (VOCs) detected in sub-slab samples at several commercial and residential properties. The objective of this summary is to provide EGLE and the Michigan Department of Health and Human Services (MDHHS) the required multiple lines of evidence to demonstrate that the impacts are not related to the Ford Livonia Transmission Plant (the site) and to request concurrence that no additional investigation is required at the commercial properties located at 12400 Belden Court and 11675 Belden Court and the residential properties located at 12001 Stark Road, 34360 Capitol Street, and 34934 Standish Street. All properties are located east of the site as shown on **Figure 1**.

2 Commercial Properties

On July 17, 2019, in response to reported exceedances of the Nonresidential Recommended Interim Action Screening Levels for a 12-hour exposure day (RIASL₁₂; Revised list September 2020) in indoor air for trichloroethylene (TCE) at 12400 and 11675 Belden Court, Ford received a letter from EGLE that required Ford to address the potential vapor intrusion pathway at both commercial properties.

On September 23, 2019, EGLE sent Ford a letter indicating that additional investigations were warranted at both commercial locations to determine if the TCE was present in groundwater near the properties.

The following subsections summarize the investigation results and the basis for the request of no additional investigations at the above-mentioned commercial properties.

2.1 12400 Belden Court

The property located at 12400 Belden Court (**Figure 2**) was occupied by Advanced Technology Services (ATS) and business at the property included industrial equipment repair. ATS occupied the space for more than 16 years and were present during the November 2018 and April 2019 sampling events. ATS used chlorinated solvents in the workplace regularly for degreasing purposes, as well as an aerosol recycler that captured excess liquid, including chlorinated solvents, in a 55-gallon steel drum. The lines of evidence used to evaluate this property included the following:

- Building Survey and chemical inventory including:
 - Inventory of floor drains, pipe penetrations, and cracks
 - Photoionization detector (PID) screening of floor drains and cracks
 - Documentation of floor staining
- Vapor intrusion assessment including:
 - Exterior soil vapor monitoring point (SVMP) sampling
 - Interior sub-slab monitoring point (SSMP) sampling, including:
 - Collection of pressure readings using a micromanometer from all SSMP sampling locations
 - Outdoor ambient air and indoor air sampling
- Groundwater sampling.

In compliance with the Consent Decree (CD), Arcadis (on behalf of Ford) submitted 24-hour notices detailing the chlorinated solvent exceedances in indoor air and sub-slab samples collected at the property. The 24-hour

notices were submitted to EGLE on November 30, 2018, May 28, 2019, October 15, 2020, and December 22, 2020. In each 24-hour notice, multiple lines of evidence were provided to EGLE documenting that the source of the exceedances was not related to the off-site vinyl chloride groundwater impacts associated with the LTP site. The 24-hour notices included significant property information, including: data packages provided to the property owner, laboratory reports for all media that Arcadis sampled at the property, safety data sheets for products noted to be present at the property, and a photo log documenting products in use at the property. Site-specific property infrastructure information such as floor drains, floor staining, pipe penetrations, and other property features were also included, a copy of which is provided in **Attachment 1**.

2.1.1 Building Survey and Chemical Inventory

Arcadis performed a detailed building survey and chemical inventory at this property before each sampling event (November 2018, April 2019, September 2020, and December 2020). ATS staff indicated to Arcadis field personnel that chemicals containing TCE and other solvents would be in use during the vapor intrusion assessment conducted in November 2018 and April 2019. Photos documenting the presence of chlorinated compounds inside the building are presented below in **Exhibits 1** and **2**. Products containing TCE, tetrachloroethene (PCE), and trans-1,2-dichloroethene (trans-1,2-DCE); degreasers (there were at least six); an aerosol can crusher; supplies of aerosols; a scrap metal bin (there were at least three) where chlorinated canisters were disposed of; and a waste solvent drum were located during the building survey and chemical inventory.

Exhibit 1. Product used by tenant containing PCE.

Exhibit 2. Product used by tenant containing TCE.

The current property owner notified Arcadis that ATS had vacated the property in July 2020. Therefore, the building was unoccupied for the September and December 2020 sampling events. During the September and December 2020 sampling events, several potential sources of VOCs were present (household cleaners and a can of instant tire repair material), but the TCE containing products and materials shown in **Exhibits 1** and **2** and in the photo log were not present during these sampling events.

Arcadis also completed an inventory of floor drains, pipe penetrations, and cracks in the slab during the September and December 2020 events. At least four floor drains and at least seven pipe penetrations were noted within the building, but no cracks in the slab were observed. During each sampling event, separate PID readings were taken close to the floor drains and in the ambient air about 4 feet above the floor drains. A maximum PID reading of 0 parts per billion (ppb) was recorded during the September 2020 sampling event from the floor drains and ambient air above the floor drains. An average PID reading of 155 ppb was recorded in the ambient air above the floor drains during the December 2020 sampling event. ATS (former tenant) reported that the floor drains were tied into the municipal sewer.

Staining was observed on the concrete slab during the September 2020 sampling event, but no staining was observed in the December 2020 sampling event.

2.1.2 Vapor Intrusion Assessment

2.1.2.1 Exterior SVMP Sampling

Two exterior nested SVMPs are associated with this property: SVMP-25S (screened 3.0 feet [ft] below ground surface [bgs]) and SVMP-25D (screened 6.0 ft bgs) are located approximately 190 feet southwest of 12400 Belden Court. Both SVMPs were sampled nine times for site-related constituents, with each result being below

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

the nonresidential site-specific volatilization to indoor air criteria (VIAC) provided by EGLE on October 30, 2018 (site-specific criteria). Each result was non-detect (below laboratory reporting limits) for trans-1,2-DCE and TCE except for one detection of TCE (1.3 J micrograms per cubic meter [$\mu\text{g}/\text{m}^3$]) in the June 2019 sampling event at SVMP-25S (**Table 1**). The June 2019 sample collected from SVMP-25S is below the nonresidential site-specific criteria of $130 \mu\text{g}/\text{m}^3$.

2.1.2.2 Interior SSMP Sampling

Analytical results for the commercial property located at 12400 Belden Court indicate exceedances of site-specific criteria for TCE in the interior sub-slab samples from three vapor intrusion sampling events (**Table 2**). The sampling events occurred in April 2019, September 2020, and December 2020. The November 2018 SSMP results were rejected due to the sample chain-of-custody document missing a signature. Results for TCE and trans-1,2-DCE from all sampling events relative to property status (occupied or unoccupied) are presented below in **Exhibit 3**. As shown in **Exhibit 3** and **Table 2**, analytical results for TCE and trans-1,2-DCE in sub-slab soil vapor show a general decreasing trend once the building became unoccupied. All other results for the site-related constituents analyzed were below site-specific criteria and/or non-detect in all sampling events.

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

Notes:

1. Results are presented in $\mu\text{g}/\text{m}^3$.
2. All samples were analyzed via modified United States Environmental Protection Agency (USEPA) Method TO-15.
3. **Bold** indicates exceedance of site-specific criteria.
4. Sample names have been shortened for simplicity.
5. All sub-slab data collected during the November 2018 sampling event were rejected.
6. Duplicate sample results collected from the property are not shown.
7. J = estimated result.
8. < = Not detected above the reporting limit.
9. Site-specific criteria (adjusted for a 12 hr work-day exposure in a slab-on-grade building less than 50,000 square feet) were provided by EGLE on October 30, 2018.

During each sampling event, pressure readings were collected using a micromanometer from all sub-slab sampling locations. The results of the pressure readings are shown below in **Exhibit 4**.

Exhibit 4. 12400 Belden Court Micromanometer Results

Sample Date:	4/9/2019	9/15/2020	12/22/2020
Sample ID	Pressure Reading (in. WC)

SSMP-09	0.00255	0.0218	-0.0050
SSMP-10	0.01500	-0.00121	-0.0060
SSMP-11	0.00440	0.00550	-0.0070
SSMP-12	0.00110	0.00597	-0.0050

Note:

1. Results presented are in inches of water column (in. WC).

2.1.2.3 Outdoor Ambient Air and Indoor Air Sampling

Analytical results for the commercial property located at 12400 Belden Court indicate exceedances of the RIASL₁₂ in indoor and outdoor ambient air samples for TCE and trans-1,2-DCE from two vapor intrusion sampling events conducted on November 15, 2018 and April 9, 2019 (**Table 3 and Table 4**). All other results for the site-related constituents analyzed were non-detect and/or detected below the RIASL₁₂ in all sampling events.

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

As shown in **Exhibit 5** and **Table 3**, exceedances of TCE and trans-1,2-DCE in indoor air only occurred while ATS occupied the building. Analytical results for TCE and trans-1,2-DCE in indoor air were significantly lower (below RIASL₁₂) during the unoccupied events.

Exhibit 5. 12400 Belden Court Indoor Air Analytical Results

Property Status:	Occupied				Unoccupied			
Sample Date:	11/15/2018		4/9/2019		9/15/2020		12/22/2020	
Constituent of Concern:	trans-1,2-DCE	TCE	trans-1,2-DCE	TCE	trans-1,2-DCE	TCE	trans-1,2-DCE	TCE
Nonresidential RIASL ₁₂	250	4	250	4	250	4	250	4
IAF-01	230	340	12,000	9,200	2.1	2.2	<0.72	<0.98
IAF-02	200	290	9,100	6,600	2.2	2.3	<0.72	<0.98
IAF-03	220	320	14,000	10,000	2.1	2.2	<0.71	<0.96
IAF-04	R	R	14,000	8,600	2.1	2.3	<0.74	<1.0
IAF-05	220	320	13,000	7,900	2.1	2.2	<0.71	<0.96
IAF-06	220	310	14,000	8,300	2.0	2.3	<0.69	<0.94
IAF-07	190	270	9,600	6,600	1.7	1.9	<0.68	<0.92
IAF-08	210	290	11,000	7,300	1.8	2.0	<0.72	<0.98
IAF-09	220	310	12,000	8,400	2.3	2.2	<0.71	<0.96
IAF-10	240	320	12,000	5,700	2.4	2.4	<0.74	0.53 J
IAF-11	210	300	7,100	5,400	2.3	2.5	0.59 J	0.57 J
IAF-12	230	330	6,600	4,900	2.3	2.6	<0.72	0.51 J

Notes:

1. Results presented are in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$).
2. All samples were analyzed via modified USEPA Method TO-15.
3. **Bold** indicates exceedance of RIASL₁₂.
4. Sample names have been shortened for simplicity.
5. Indoor air samples were collected in June 2020; however, sub-slab soil vapor samples could not be collected concurrently due to health and safety concerns, so data from these indoor air samples is not shown.
6. Duplicate and ambient air sample results collected from the property are not shown.
7. R = Rejected Sample.
8. < = Not detected above the reporting limit
9. J = Estimated Value
10. Non-Residential RIASL appropriate for exposure of 12 hours as provided by EGLE in August 2017 and updated in September 2020.

2.1.3 Groundwater Analytical Results

Shallow groundwater monitoring wells MW-54S (screened 4.5 to 9.5 ft bgs) and MW-214S (screened 5.5 to 10.5 ft bgs) are located approximately 250 feet and 60 feet upgradient (west) of 12400 Belden Court, respectively (**Figure 2**). The monitoring wells were installed to determine if shallow groundwater impacts were present and

presented an apparent risk of vapor intrusion to the commercial buildings in the northern cul-de-sac of Belden Court. Results of the sampling are as follow:

- Monitoring Well MW-54S has been sampled eight times, with each result non-detect for TCE and trans-1,2-DCE (**Table 5**).
- Monitoring Well MW-214S has been sampled four times, with each result non-detect for TCE and trans-1,2-DCE (**Table 5**).
- Based on Henry's Law at 10 degrees Celsius, groundwater concentrations of 0.63 to 14.06 micrograms per liter ($\mu\text{g/L}$) for TCE would be needed to generate the 130 to 2,900 $\mu\text{g/m}^3$ concentration for TCE noted in sub-slab soil vapor. For trans-1,2-DCE, a concentration of 38.40 $\mu\text{g/L}$ in groundwater would be needed to generate the 8,200 $\mu\text{g/m}^3$ to exceed site-specific criteria for trans-1,2-DCE.

The groundwater data collected upgradient of 12400 Belden Court show that groundwater concentrations migrating from the LTP site are not sufficient to create the sub-slab and indoor air concentrations observed at the 12400 Belden Court building.

2.1.4 12400 Belden Court Summary

As part of this evaluation, multiple lines of evidence have been used to assess the vapor intrusion risk to the building including building surveys and chemical inventories, exterior soil vapor, interior sub-slab soil vapor, ambient air, indoor air, and groundwater. These multiple lines of evidence demonstrate that indoor air and sub-slab vapor impacts observed at 12400 Belden Court are not related to operations at the LTP. These lines of evidence include:

- Products containing TCE and trans-1,2-DCE were in use during the vapor intrusion assessment conducted in November 2018 and April 2019, when concentrations of TCE and trans-1,2-DCE were highest in sub-slab (April 2019) and indoor air sample results (November 2018 and April 2019).
- Staining observed on the floor in the building during the September 2020 event suggests the potential release of solvents and migration to the subfloor. These releases likely contributed to the elevated PID readings at floor openings (e.g., floor drains) and detections in sub-slab vapor.
- Two exterior nested SVMPs have each been sampled nine times, with each result being non-detect or below the site-specific criteria for trans-1,2-DCE and TCE.
- Results that exceeded site-specific criteria in sub-slab soil vapor samples declined significantly once ATS had vacated the building and ceased operations, suggesting that a release as a result of ATS' operations contributed to soil vapor concentrations.
- Negative pressure readings were recorded on SSMPs during all sampling events, indicating that indoor air has the potential to migrate to the sub-slab and impact sub-slab soil vapor concentrations.
- Indoor air concentrations exceeding the RIASLs₁₂ in indoor air samples declined significantly and did not exceed the RIASLs₁₂ once ATS had vacated the building and ceased operations, indicating that the source of the exceedances in indoor air is from ATS operations.
- The groundwater data collected at monitoring wells MW-54S and MW-214S located upgradient of 12400 Belden Court suggest that impacts are not present in sufficient concentrations to create the sub-slab and indoor air concentrations observed at the 12400 Belden Court building.

2.2 11675 Belden Court

The property located at 11675 Belden Court (**Figure 3**) is occupied by a civil/environmental consultant that used TCE to process asphalt samples. The lines of evidence used to evaluate this property included the following:

- Building Survey and chemical inventory including:
 - Inventory of floor drains and cracks
 - PID screening of floor drains and cracks
- Vapor intrusion assessment including:
 - Exterior SVMP sampling
 - Interior SSMP sampling including:
 - Collection of pressure readings using a micromanometer from all SSMP sampling locations
 - Outdoor ambient air and indoor air sampling
- Groundwater sampling.

In compliance with the CD, Arcadis (on behalf of Ford) submitted 24-hour notices detailing the exceedances of TCE in indoor air and sub-slab samples. The 24-hour notices were submitted to EGLE on December 11, 2018, June 13, 2019, August 15, 2019, and December 6, 2019. In each 24-hour notice, multiple lines of evidence were provided to EGLE documenting that the source of the exceedances was not related to the off-site vinyl chloride groundwater impacts. The 24-hour notices, data packages provided to the property owner, laboratory reports for all media that Arcadis collected at the property, safety data sheets for products noted to be present at the property, and a photo log documenting products in use at the property and floor drains within the building are provided in **Attachment 2**.

2.2.1 Building Survey and Chemical Inventory

Arcadis performed a detailed building survey and chemical inventory at this property before each sampling event (November 2018, March 2019, July 2019, and November 2019). During the building survey and chemical inventory conducted in November 2018, Arcadis staff noted that TCE was in use in the warehouse portion of the building along with a fume hood and aerosol canisters containing paint, pesticides, and cleaners. At least four drums containing TCE were also noted during the chemical inventory. Photos documenting the presence of chlorinated compounds inside the building are presented below in **Exhibits 6 and 7**.

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

Exhibit 6. Drum containing TCE

Exhibit 7. Drum containing TCE.

During the building survey conducted before the March 2019 sampling event, on-site staff indicated to Arcadis staff that the use of TCE had been terminated and that any products containing TCE had been removed from the property. Although several potential sources of VOCs were present, products containing TCE were not in use during the March 2019, July 2019, and December 2019 sampling events. VOC containing chemicals such as gas cans, spray paints, epoxy residue remover, wasp and hornet killer, paint thinner, urethane foam, heavy-duty silicone, silicone lubricant, starting fluids, primers, rubber cement, varnish, and spray grease were removed from the site before each round of sampling and stored in either the storage room or in company vehicles in the parking lot.

Arcadis also completed an inventory of floor drains and cracks in the slab of the building. Two floor drains in the bathrooms and one floor drain in the warehouse were noted. Cracks were observed throughout the slab floor of the warehouse; however, the exact number and lengths of the cracks were not recorded. Although staining was not present on the floors inside the building, PID readings in the ambient air in the vicinity of the floor drains were recorded at 700 ppb, 81 ppb, 0 ppb, and 82 ppb in the November 2018, March 2019, July 2019, and November 2019 vapor intrusion assessments, respectively.

2.2.2 Vapor Intrusion Assessment

2.2.2.1 Exterior SVMP Sampling

Former exterior soil vapor monitoring points SVMP-15-05 (screened 5.0 ft bgs and located approximately 400 feet north of the property), SVMP-15-06 (screened 6.0 ft bgs and located along the western property boundary), and SVMP-15-07 (screened 7.0 ft bgs and located approximately 350 feet south of the property) have all been sampled one time. All results from this sampling event were below site-specific criteria, and results were non-detect for TCE (**Table 1**).

2.2.2.2 Interior SSMP Sampling

Analytical results for the commercial property located at 11675 Belden Court indicate exceedances of site-specific criteria for TCE in interior sub-slab samples in all sampling events (**Table 2**). All results for the other site-related constituents analyzed were below site-specific criteria and/or non-detect in all sampling events. As shown in **Exhibit 8** and **Table 2**, analytical results for TCE in sub-slab soil vapor decreased on average once products containing TCE were removed from the building.

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

Exhibit 8. 11675 Belden Court Soil Vapor Analytical Results

Property Status:	TCE Present		TCE Removed	
Sample Date:	11/29/2018	3/28/2019	7/24/2019	11/12/2019
Constituent of Concern:	TCE	TCE	TCE	TCE
Nonresidential Site- Specific Criteria:	130	130	130	130
SSMP-01	34	13	8.9	180
SSMP-02	110	54	62	20
SSMP-03	280	250	270	<6.9
SSMP-04	110	39	27	14
SSMP-05	74	6.4 J	2.8 J	16
SSMP-06	57	16	7.5	5.6 J

Notes:

1. Results are presented in µg/m³.
2. All samples were analyzed via modified USEPA Method TO-15.
3. **Bold** indicates exceedance of site-specific criteria.
4. Sample names have been shortened for simplicity.
5. Duplicate sample results collected from the property are not shown.
6. J = estimated result.
7. < = Not detected above the reporting limit.
8. Site-specific criteria (adjusted for a 12 hr work-day exposure in a slab-on-grade building less than 50,000 square feet) were provided by EGLE on October 30, 2018.

During each sampling event, pressure readings were collected using a micromanometer from all sub-slab sampling locations as shown in **Exhibit 9**.

Exhibit 9. 11675 Belden Court Micromanometer Results

Sample Date:	11/29/2018	3/28/2019	7/24/2019	11/12/2019
	Pressure Reading (in. WC)			
SSMP-01	0.0080	0.0070	-0.0026	0.00060
SSMP-02	0.0016	-0.0076	0.0026	0.0050
SSMP-03	0.00080	-0.0031	0.00017	-0.0014

SSMP-05	0.0037	0.00030	0.0023	0.0023
SSMP-06	0.0054	0.0030	0.0021	0.0013

2.2.2.3 Outdoor Ambient Air and Indoor Air Sampling

Analytical results for the commercial property located at 11675 Belden Court indicate exceedances of the RIASL₁₂ for TCE in indoor air samples collected from all sampling events (**Table 3**). The outdoor ambient air sample collected from the property in November 2018 was rejected due to a low initial vacuum. The analytical results from that event have been removed from the dataset. All results for the other site-related constituents analyzed were below the RIASLs₁₂ and/or non-detect in all sampling events. As shown in **Exhibit 10** and **Table 3**, indoor air concentrations of TCE were significantly higher when products containing TCE were in use at the property (November 2018 sampling event).

Exhibit 10. 11675 Belden Court Indoor Air Analytical Results

Property Status:	TCE Present	TCE Removed		
	Sample Date:	11/29/2018	3/28/2019	7/24/2019
Constituent of Concern:	TCE	TCE	TCE	TCE
Nonresidential Site- Specific Criteria:	130	130	130	130
IAF-01	630	7.0	5.5	2.1
IAF-02	380	4.4	4.1	1.4
IAF-03	350	3.8	4.2	1.2
IAF-04	730	8.8	4.5	2.6
IAF-05	700	14	5.5	5.1

Notes:

1. Results are presented in µg/m³.
2. All samples were analyzed via modified USEPA Method TO-15.
3. Bold indicates exceedance of RIASL₁₂.
4. Sample names have been shortened for simplicity.
5. Duplicate and ambient air sample results collected from the property are not shown.
6. Non-Residential RIASL appropriate for exposure of 12 hours as provided by EGLE in August 2017 and updated in September 2020.

2.2.3 Groundwater Analytical Results

Shallow monitoring well MW-208S is located approximately 40 feet upgradient to the west of the site property (**Figure 3**). MW-208S, which was requested by EGLE in the July 17, 2019 letter, is screened from 9.0 to 14.0 ft bgs. The monitoring well was installed to determine if shallow groundwater impacts had the potential to produce vapor intrusion at the commercial property. The sampling frequency and analytical results of the groundwater sampling events were as follow:

- MW-208S has been sampled four times, and all groundwater results for TCE have been non-detect (**Table 5**).
- Based on Henry’s Law at 10 degrees Celsius, a groundwater concentration of 0.63 to 1.36 µg/L for TCE would be needed to generate the 130 to 280 µg/m³ noted in sub-slab soil vapor beneath the slab.

Based on the groundwater data in the vicinity of 11675 Belden Court, there is no evidence of a TCE impact to groundwater that could cause the exceedances observed in the sub-slab and indoor air samples.

2.2.4 Summary

As part of this evaluation, multiple lines of evidence have been used to assess the vapor intrusion risk to the building including building surveys and chemical inventories, exterior soil vapor, interior sub-slab soil vapor, ambient air, indoor air, and groundwater. The multiple lines of evidence demonstrate that indoor air and sub-slab vapor impacts observed at 11675 Belden Court are not related to operations at the LTP. These lines of evidence include:

- Products containing TCE were in use during the vapor intrusion assessment conducted in November 2018 when concentrations of TCE were highest on average in sub-slab and indoor air sample results.
- Potential releases of chemicals to the floor that migrated through floor drains into sub-slab soils have likely contributed to the elevated PID readings at floor openings (e.g., floor drains) and detections in sub-slab vapor.
- Three former exterior SVMPs have each been sampled one time, with each result being non-detect for TCE.
- Results that exceeded site-specific criteria in sub-slab soil vapor samples declined on average when products containing TCE were removed from the property, suggesting that a release as a result of the consultant's operations contributed to soil vapor concentrations.
- Negative pressure readings were recorded on SSMPs during three of four sampling events, indicating that indoor air has the potential to migrate to sub-slab and impact sub-slab soil vapor concentrations.
- Indoor air concentrations of TCE were significantly lower when products containing TCE were removed from the property, indicating that the source of the TCE in indoor air is from the consultant's former operations.
- The groundwater data collected at monitoring well MW-208S, located upgradient of 11675 Belden Court, suggest that impacts are not present in sufficient concentrations to create the sub-slab and indoor air concentrations observed at the 11675 Belden Court building.

3 Residential Properties

On December 9, 2019, September 23, 2019, and January 6, 2020, Ford received emails and a letter from EGLE requesting further information concerning three residential properties (12001 Stark Road, 34360 Capitol Street, and 34934 Standish Street). These properties exhibited exceedances of the Residential Volatilization to Indoor Air RIASLs provided by EGLE on July 22, 2017 in the CD for indoor air and/or exceedances of the residential site-specific VIAC provided by EGLE on October 30, 2018 (site-specific criteria) for sub-slab soil vapors.

On March 31, 2020, Arcadis (on behalf of Ford) submitted a workplan via email to EGLE for review and approval.

On April 29, 2020, EGLE provided comments to the workplan, which was incorporated into the investigation approach.

The following subsections summarize the investigation results and the basis for the request of no additional investigations at the above-mentioned residential properties.

3.1 12001 Stark Road

The property located at 12001 Stark Road (**Figure 4**) is a single-family residential home with an attached garage. The property is part of Alden Village subdivision located downgradient to the east of the site. The lines of evidence used to evaluate this property included the following:

- Building Survey and chemical inventory including:
 - Inventory of floor drains and cracks

- PID screening of floor drains and cracks
- Vapor intrusion assessment including:
 - Interior SSMP sampling
 - Outdoor ambient air and indoor air sampling
- Groundwater sampling
- Soil and groundwater investigation.

In compliance with the CD, Arcadis (on behalf of Ford) submitted 24-hour notices detailing the exceedances in sub-slab samples. The 24-hour notices were submitted to EGLE on November 10, 2018, September 6, 2019, and November 13, 2019. It should be noted that all sample results from the December 2019 sampling event did not exceed the RIASLs or site-specific criteria for indoor/ambient air or sub-slab soil vapor samples, respectively. Therefore a 24-hour notice was not submitted for this fourth and final event. In each 24-hour notice, multiple lines of evidence were provided to EGLE documenting that the source of the exceedances was not related to the off-site vinyl chloride groundwater impacts. The 24-hour notices, data packages provided to the property owner; laboratory reports for all media that Arcadis collected at the property; and a photo log documenting products in use at the property, a floor drain in the garage, and cracks within the garage floor are provided in **Attachment 3**.

3.1.1 Building Survey and Chemical Inventory

Arcadis performed detailed chemical inventories at this property before all sampling events (October 2018, April 2019, October 2019, and December 2019). During the inventories, it was noted the homeowner keeps several degreasers and cleaners on shelves in the garage, as shown in the photo log.

The products presented in the photo log were removed from the garage and stored in a tote outside of the garage before each round of sampling. The resident would not allow photographs inside the garage during the December 2019 sampling event. Field staff did not note any spills or stains on the garage floor that indicated a release; however, evidence of poor housekeeping in the garage was noted by field staff including clutter on the floor of the garage in which chemicals were intermixed. The amount of clutter in the garage made it difficult to inventory and remove all items in the garage that could potentially contain site-related constituents of concern and may have been spilled onto the garage floor.

Arcadis also noted that there was one floor drain in the slab of the garage. It is unknown to where the floor drain discharges. A number of cracks in the slab of the garage were also observed; however, an exact count was not noted. PID readings in the ambient air above the floor drain were recorded at 0 ppb, 0 ppb, 40 ppb, and 77 ppb in the October 2018, April 2019, October 2019, and December 2019 assessments, respectively.

3.1.2 Vapor Intrusion Assessment

3.1.2.1 Interior SSMP Sampling

Analytical results from two vapor intrusion sampling events for the residential property located at 12001 Stark Road indicated that PCE was detected above the site-specific criteria in the sub-slab soil vapor collected from the garage (**Table 6**). All results for the other site-related constituents analyzed were below site-specific criteria and/or non-detect.

3.1.2.2 Outdoor Ambient Air and Indoor Air Sampling

There have been no exceedances of the RIASLs in indoor or outdoor ambient air samples collected at the property; only low-level detections (**Table 7** and **8**). Due to quality assurance and quality control issues, the first round of data (October 2018) has been removed from the dataset, but the results were similar to the second and third rounds of vapor intrusion sampling.

3.1.3 Groundwater Analytical Results

Shallow monitoring well MW-106S is located approximately 80 feet to the west upgradient of 12001 Stark Road, and MW-167S is located on the property approximately 30 feet downgradient to the east (**Figure 4**). MW-106S is screened from 2.5 to 12.5 ft bgs, and MW-167S is screened from 5.0 to 10.0 ft bgs. These wells were installed as part of the August 30, 2018 VI-Response Activity Plan approval letter in an effort to determine if shallow groundwater impacts had the potential to produce vapor intrusion at the residential property. The list below details the sampling frequency and analytical results of the groundwater sampling events:

- MW-106S has been sampled nine times, and all groundwater results for PCE have been non-detect (**Table 9**).
- MW-167S has been sampled eight times, and all groundwater results for PCE have been non-detect (**Table 9**).
- Based on Henry's Law at 10 degrees Celsius, groundwater concentrations of 4.15 to 8.31 µg/L for PCE would be needed to generate the 1,400 to 2,800 µg/m³ to exceed the site-specific criteria for PCE noted in sub-slab soil vapor beneath the slab.

Based on the groundwater data in the vicinity of 12001 Stark Road, there is no evidence of a PCE impact to groundwater that could cause the exceedances observed in the sub-slab samples in the garage. Further, three to 15 rounds of groundwater sampling have been completed to date from 185 monitoring wells installed east of the site including within the Alden Village subdivision, where 12001 Stark Road is located. The data, which are presented in the quarterly progress reports, indicate that PCE concentrations have never exceeded site-specific VIAC in any of the monitoring wells within the Alden Village subdivision.

3.1.4 Soil and Groundwater Investigation

Arcadis attempted to complete an investigation within the garage near the SSMP location to determine the source of the impacts. The proposed investigation included advancing four soil borings to the water table with soil samples collected in 1-foot intervals. At one of the soil boring locations, a temporary monitoring well with a pre-packed screen would be installed to bisect the water table and collect a groundwater sample. Arcadis was not granted access to the property, and the proposed investigation was not completed.

3.1.5 Summary

As part of this evaluation, multiple lines of evidence have been used to assess the vapor intrusion risk to the property including building surveys and chemical inventories, interior sub-slab soil vapor from this property and neighboring properties, ambient air, indoor air, and groundwater. The following multiple lines of evidence demonstrate that sub-slab vapor impacts observed at 12001 Stark Road are not related to operations at the LTP:

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

- All sample results for sump water, sub-slab, indoor air, and ambient air samples collected at properties adjacent to 12001 Stark Road have not exceeded the RIASLs and/or site-specific criteria for PCE or any other site-related constituent of concern.
- The amount of clutter in the garage made it difficult to inventory and remove all items in the garage that could potentially contain site-related constituents of concern and may have been spilled onto the garage floor.
- Potential releases of chemicals to the floor that migrated through the floor drain and cracks into sub-slab soils have likely contributed to the elevated PID readings at floor openings (e.g., floor drains and cracks) and detections in sub-slab soil vapor.
- There have been no exceedances of PCE in indoor or ambient air samples collected at the property; only low-level detections.
- The groundwater data collected at monitoring wells MW-106S located upgradient of 12001 Stark Road and MW-167S located on 12001 Stark Road suggest that impacts are not present at sufficient concentrations to create the sub-slab concentrations observed at 12001 Stark Road.

3.2 34360 Capitol Street

The property located at 34360 Capitol Street (**Figure 5**) is a single-family residential home with a detached two-car garage. The property is part of the Alden Village subdivision located downgradient to the east of the site. The lines of evidence used to evaluate this property included the following:

- Building Survey and chemical inventory including:
 - Inventory of floor drains and cracks
 - PID screening of floor drains and cracks
- Vapor intrusion assessment including:
 - Exterior SVMP sampling
 - Interior SSMP sampling
 - Outdoor ambient air and indoor air sampling
- Groundwater sampling
- Soil and groundwater investigation.

In compliance with the CD, Arcadis (on behalf of Ford) submitted 24-hour notices detailing the exceedances in sub-slab samples. The 24-hour notices were submitted to EGLE on September 6, 2019, December 20, 2019, and August 19, 2020. It should be noted that none of the sample results from the December 2018 sampling event exceeded the RIASLs or site-specific criteria for indoor/ambient air samples or sub-slab soil vapor samples. Therefore a 24-hour notice was not submitted for this first sampling event. In each subsequent 24-hour notice, multiple lines of evidence were provided to EGLE documenting that the source of the exceedances was not related to the off-site vinyl chloride groundwater impacts. The 24-hour notices, data packages provided to the property owner, laboratory reports for all media that Arcadis collected at the property, and the safety data sheet for a product noted to be present at the property are provided in **Attachment 4**.

3.2.1 Building Survey and Chemical Inventory

Arcadis performed detailed chemical inventories at this property before all sampling events (December 2018, June 2019, December 2019, and July 2020). During the building survey and chemical inventory, a number of potential sources of VOCs were noted including aerosol cleaners, solvents, and household products. An aerosol canister of “Carquest Brake Parts Cleaner” was noted in the garage during the June 2019 sampling event. A

photo documenting this product is presented below in **Exhibit 11**. The safety data sheet for this product indicates that this product is 90 to 100 percent PCE.

Exhibit 11. Aerosol canister of "Carquest Brake Parts Cleaner"

All products presented in **Exhibit 11** were removed before sampling in June. Arcadis staff asked the property owner about when the product was last used. The property owner was unsure of its last use and could not give a timeline on how recently they had used the product before the sampling event.

Arcadis staff observed one crack in the slab floor of the garage; however, the length of the crack was not recorded. PID readings in the ambient air in the vicinity of the crack were recorded at 0 ppb, 476 ppb, 716 ppb, and 0 ppb in the December 2018, June 2019, December 2019, and July 2020 vapor intrusion assessments, respectively.

3.2.2 Vapor Intrusion Assessment

3.2.2.1 Exterior SVMP Sampling

Exterior soil vapor monitoring point SVMP-18 (screened at 3.0 ft bgs) is located approximately 135 feet upgradient (southwest) of this property. This monitoring point has been sampled nine times, with all results being non-detect (**Table 10**).

3.2.2.2 Interior SSMP Sampling

Analytical results from three vapor intrusion sampling events for the residential property located at 34360 Capitol Street indicated that PCE was detected above the site-specific criteria of 1,400 $\mu\text{g}/\text{m}^3$ in the sub-slab soil vapor collected from beneath the garage (SSMP-01) (**Table 6**). All results for the other site-related constituents analyzed were below site-specific criteria and/or non-detect. The sub-slab soil vapor sample collected from beneath the garage in December 2018 was rejected due to a low laboratory check in vacuum and has been removed from the dataset.

3.2.2.3 Outdoor Ambient Air and Indoor Air Sampling

There have been no exceedances of the RIASLs in indoor or outdoor ambient air samples collected at the property; only low-level detections of site-related constituents (**Table 7** and **8**).

3.2.3 Groundwater Analytical Results

Groundwater monitoring well MW-128S is located on 34360 Capitol Street, approximately 10 feet away from the house and 90 feet away from the garage (**Figure 5**). MW-128S, which was installed as part of the August 30, 2018 VI-Response Activity Plan approval letter, is screened from 4.0 to 14.0 ft bgs. The monitoring well was installed to determine if shallow groundwater impacts had the potential to produce vapor intrusion at the residential property. The list below details the sampling frequency and analytical results of the groundwater sampling events:

- MW-128S has been sampled nine times, with each sampling event being non-detect for PCE (**Table 9**).
- Based on Henry's Law at 10 degrees Celsius, a groundwater concentration of 4.15 to 27.88 $\mu\text{g}/\text{L}$ PCE would be needed to generate the 1,400 to 9,400 $\mu\text{g}/\text{m}^3$ PCE noted in sub-slab soil vapor beneath the garage.

Based on the groundwater data in the vicinity of 34360 Capitol Street, there is no evidence of a PCE impact to groundwater that could cause the exceedances observed in the sub-slab samples observed at the residence. Further, three to 15 rounds of groundwater sampling have been completed to date from 185 monitoring wells installed east of the LTP site, including within the Alden Village subdivision, where 34360 Capitol Street is located. The data, which are presented in the quarterly progress reports, indicate that PCE concentrations have never exceeded site-specific VIAC in any of the monitoring wells within the Alden Village subdivision.

3.2.4 Soil and Groundwater Investigation

A soil and groundwater investigation was completed inside the garage on Monday, July 27, 2020 to evaluate PCE impacts in sub-slab soil vapor below the garage in the vicinity of SSMP-01. Four soil borings (SB-138, SB-139, SB-140, and TMW-20-01) were completed within approximately 1 to 5 feet of SSMP-01 (**Figure 5**), and the soil boring logs are included in **Attachment 5**.

3.2.4.1 Soil Results

As a part of the investigation, 25 soil samples were collected and analyzed for the seven constituents of concern. Soil samples were collected in 1-foot intervals until groundwater was encountered at each location. Groundwater was observed at approximately 7.0 ft bgs. The soil analytical results ranged from non-detect to 3,100 micrograms per kilogram ($\mu\text{g}/\text{kg}$), with the highest concentration detected in the 1- to 2-foot sample from SB-139. Based on the data collected from these borings, PCE was detected at concentrations above site-specific criteria in the vadose zone soils decreasing with depth, suggesting that a localized surface spill within the garage that migrated

down into the subsurface could be the source of the impacts and are not a result of fluctuations within the groundwater table. All soil analytical results are summarized in **Table 10**.

3.2.4.2 Groundwater Results

The soil boring completed at TMW-20-01 was converted into a temporary monitoring well, and a groundwater sample was collected from 3.5 to 8.5 ft bgs. The groundwater sample was collected using low-flow sampling techniques and was analyzed for the seven constituents of concern. The groundwater analytical result was non-detect for PCE, further supporting the evidence that the sub-slab impacts are related to the impacts found in the shallow soils beneath the garage. All groundwater results are summarized in **Table 9**.

3.2.5 Summary

As part of this evaluation, multiple lines of evidence, including building surveys and chemical inventories, exterior soil vapor, interior sub-slab soil vapor, ambient air, indoor air, soil, and groundwater, have been used to assess the vapor intrusion risk to this residential property. The multiple lines of evidence demonstrate that sub-slab vapor impacts observed at 34360 Capitol Street are not related to operations at the LTP. These lines of evidence include:

- The product “Carquest Brake Parts Cleaner,” which is 90 to 100 percent PCE, is located in the garage and likely contributed to the PCE concentrations in sub-slab soil vapor in all sampling events.
- Exterior SVMP-18 has been sampled nine times, with each result being non-detect.
- Potential releases of chemicals to the floor that migrated through cracks in the garage floor into sub-slab soils have likely contributed to the elevated PID readings at floor openings (e.g., cracks) and detections in sub-slab soil vapor.
- There have been no exceedances of RIASLs in indoor or ambient air samples collected at the property; only low-level detections of site-related constituents.
- The groundwater data collected at monitoring well MW-128S located on 34360 Capitol Street suggest that impacts are not present in sufficient concentrations to create the sub-slab concentrations observed at 34360 Capitol Street.
- Impacts detected in the shallow soils beneath the garage suggest that a localized surface spill within the garage migrated down into the subsurface and could be the source of the impacts.
- The groundwater analytical data collected at TMW-20-01 were non-detect for PCE, further supporting the evidence that the sub-slab soil vapor impacts are related to the impacts found in the shallow soils beneath the garage.

3.3 34934 Standish Street

The property located at 34934 Standish Street (**Figure 6**) is a single-family residential home with a detached two-car garage. The property is part of the Alden Village subdivision located downgradient to the east of the site. The lines of evidence used to evaluate this property included the following:

- Building Survey and chemical inventory including:
 - Inventory of floor drains and cracks
 - PID screening of floor drains and cracks
- Vapor intrusion assessment including:
 - Exterior SVMP sampling

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

- Interior SSMP sampling
- Outdoor ambient air and indoor air sampling
- Groundwater sampling
- Soil and groundwater investigation.

In compliance with the CD, Arcadis (on behalf of Ford) submitted 24-hour notices detailing the exceedances in indoor air samples. The 24-hour notices were submitted to EGLE on September 6, 2019 and November 14, 2019. It should be noted that all sample results from the first (October 2018), second (April 2019), and fifth and final sampling event (February 2020) did not exceed the RIASLs or site-specific criteria for indoor/ambient air samples and sub-slab samples. As a result, 24-hour notices were not submitted for these events. In each 24-hour notice, multiple lines of evidence were provided to EGLE documenting that the source of the exceedances was not related to the off-site vinyl chloride groundwater impacts. The 24-hour notices, data packages provided to the property owner, laboratory reports for all samples that Arcadis collected at the property, and the safety data sheet for a product noted to be present at the property are provided in **Attachment 5**.

3.3.1 Building Survey and Chemical Inventory

Arcadis performed detailed chemical inventories in the home and garage at this property before all sampling events (October 2018, April 2019, June 2019, October 2019, and February 2020).

An aerosol canister of “CRC Lectra Motive Electric Parts Cleaner” was noted in the garage before the June 2019 sampling event. A photo documenting this product is presented below in **Exhibit 12**. The safety data sheet for this product indicates that this product is 90 to 100 percent PCE.

Exhibit 12. Aerosol canister of CRC Lectra-Motive Electric Parts Cleaner found in the garage containing PCE.

The product (“CRC Lectra Motive Electric Parts Cleaner”) presented in **Exhibit 12** was removed from the garage and stored in a tote outside before the June 2019 sampling event. It is unclear when the product may have been used before sampling. Arcadis was not provided access to the house to complete the chemical inventory during the April 2019, June 2019, and October 2019 sampling events at the property owner’s request. Arcadis was

provided limited access to the garage during these sampling events to conduct a chemical inventory. During the chemical inventory for the October 2019 vapor intrusion sampling event, the homeowner removed chemicals from the garage on his own that included aerosol cleaners, solvents, and household products and placed them in his own tote. Arcadis then placed these chemicals in an Arcadis tote and stored the tote outside of the garage. The property owner indicated that all chemicals from the garage were placed in the tote that he provided to Arcadis. The property owner indicated that what was provided was sufficient in order to complete the testing for this sampling event. TCE was detected at concentrations above the RIASL in indoor air collected from the garage during the October 2019 sampling event (see Section 3.3.2.3). Arcadis did not locate any products containing TCE out of the chemical inventories that Arcadis was able to complete and what the property owner provided.

3.3.2 Vapor Intrusion Assessment

3.3.2.1 Exterior SVMP Sampling

Two exterior SVMPs are located in the vicinity of 34934 Standish. SVMP-28 (screened 3.0 ft bgs) is located approximately 670 feet upgradient (northwest) of this property. This monitoring point has been sampled nine times and PCE was the only site-related constituent detected out of all results for the nine sampling events. PCE was included in the analysis for eight of the nine sampling events. Detections of PCE were present in three of the eight sampling events, but PCE results from all eight events are below the site-specific criteria for PCE of 1,400 $\mu\text{g}/\text{m}^3$ (**Table 10**). TCE was non-detect (reporting limits between 5.8 and 7.1 $\mu\text{g}/\text{m}^3$) for all nine sampling events. Soil vapor monitoring point SVMP-29 (two screened intervals at 3.5 ft bgs and 7.5 ft bgs) is located approximately 130 feet upgradient (northwest) of the property. This monitoring point has been sampled once for TCE and vinyl chloride only, with both interval results being non-detect for both constituents.

3.3.2.2 Interior SSMP Sampling

There have been no exceedances of site-specific criteria in interior sub-slab samples collected at the property; only low-level detections of site-related constituents (**Table 6**).

3.3.2.3 Outdoor Ambient Air and Indoor Air Sampling

Analytical results for the residential property at 34934 Standish Street indicate that TCE and PCE were detected at concentrations above the RIASLs in indoor air collected from the garage during two vapor intrusion sampling events (**Table 7**). PCE concentrations in indoor air collected from the garage exceeded the RIASL during the June 2019 sampling event, and TCE concentrations in indoor air collected from the garage exceeded the RIASL during the October 2019 sampling event. Concentrations of all other site-related constituents analyzed in all vapor intrusion sampling events were below the RIASLs and/or non-detect.

There have been no exceedances of the RIASLs in outdoor ambient air samples collected at the property; only low-level detections of site-related constituents (**Table 7**).

3.3.3 Groundwater Analytical Results

Groundwater monitoring well MW-183S is located on 34934 Standish Street, approximately 15 feet away from the house and 60 feet away from the garage (**Figure 6**). MW-183S, which was installed as part of the October 23, 2018 EGLE request letter, is screened from 8.0 to 13.0 ft bgs. The monitoring well was installed to determine if shallow groundwater impacts had the potential to produce vapor intrusion at the residential property. The list below details the sampling frequency and analytical results of the groundwater sampling events:

- MW-183S has been sampled seven times, with each sampling event non-detect for PCE and TCE (**Table 9** and **Attachment 5**).
- Based on Henry's Law at 10 degrees Celsius, groundwater concentrations of 0.32 µg/L TCE and 4.15 µg/L PCE would be needed to generate the 67 µg/m³ to exceed the site-specific criteria for TCE and 1,400 µg/m³ to exceed the site-specific criteria for PCE.

Based on the groundwater data in the vicinity of 34934 Standish Street, there is no evidence of a PCE or TCE impact to groundwater that could cause the exceedances observed in the indoor air samples at the residence. Further, three to 15 rounds of groundwater sampling have been completed to date from 185 monitoring wells installed east of the site, including within the Alden Village subdivision, where 34934 Standish Street is located. The data, which are presented in the quarterly progress reports, indicate that PCE and TCE has never exceeded site-specific VIAC criteria in any of the monitoring wells within the Alden Village subdivision.

3.3.4 Soil and Groundwater Investigation

A soil and groundwater investigation was completed inside the garage on Tuesday, July 28, 2020 to evaluate PCE detections in sub-slab soil vapor below the garage in the vicinity of SSMP-01. Four soil borings (SB-141, SB-142, SB-143, and TMW-20-02) were completed within approximately 1 to 6 feet of SSMP-01 (**Figure 6**), and soil boring logs are included in **Attachment 6**.

3.3.4.1 Soil Results

As a part of the investigation, 32 soil samples were collected and analyzed for the seven constituents of concern. Soil samples were collected in a 0.5-ft interval from the surface sample and then in 1-ft intervals until groundwater was encountered at each location. Groundwater was observed at approximately 8.0 ft bgs. The soil analytical results for PCE were non-detect for all samples except for one detection of 19 J (a laboratory estimated value) µg/kg in the 3- to 4-foot sample from SB-142. Based on the soil analytical results, there is no source present in the soil that would contribute to the indoor air impacts found within the garage. All soil analytical results are summarized in **Table 11**.

3.3.4.2 Groundwater Results

The soil boring completed at TMW-20-02 was converted into a temporary monitoring well, and a groundwater sample was collected from 7.0 to 12.0 ft bgs, bisecting the water table. The groundwater sample was collected using low-flow sampling techniques and was analyzed for the seven constituents of concern. The groundwater analytical results were non-detect for PCE and TCE, further supporting the evidence that the indoor air impacts present in the garage are not related to previously unknown subsurface sources. All groundwater results are summarized in **Table 9**.

3.3.5 Summary

As part of this evaluation, multiple lines of evidence, including building surveys and chemical inventories, exterior soil vapor, interior sub-slab soil vapor, ambient air, indoor air, soil, and groundwater, have been used to assess the vapor intrusion risk to this residential property. The multiple lines of evidence demonstrate that indoor air impacts observed at 34934 Standish Street are not related to operations at the LTP. These lines of evidence include:

Summary of Individual Off-site Vapor Intrusion Evaluations and Request for No Additional Investigations

- The product “CRC Lectra Motive Electric Parts Cleaner,” which is 90 to 100 percent PCE and located in the garage, likely contributed to PCE concentrations in indoor air collected from the garage during the June 2019 sampling event.
- The limited access to the house and garage at the property owner’s request made it difficult for Arcadis to locate and isolate any background sources that may have contributed to analyte concentrations in indoor air collected from the property.
- Exterior soil vapor monitoring point SVMP-28 has been sampled nine times, with all results being below site-specific criteria for PCE and TCE. Exterior soil vapor monitoring point SVMP-29 has been sampled once for TCE, with both interval results being non-detect.
- There have been no exceedances of PCE or TCE in either the outdoor ambient air or sub-slab samples collected at the property; only low-level detections, suggesting that the exceedances in indoor air are from a background source that is likely present in the garage.
- The groundwater data collected at monitoring well MW-183S located on 34934 Standish Street suggest that impacts are not present in sufficient concentrations to create the sub-slab and indoor air concentrations observed at 34934 Standish Street.
- Based on the soil analytical results, there is no source in soil that would contribute to the indoor air impacts found within the garage.
- The groundwater analytical data collected at TMW-20-02 was non-detect for PCE, further supporting the evidence that the indoor air impacts are not related to previously unknown subsurface sources.

4 Closing

Ford has completed an investigation and evaluation of the vapor intrusion pathway at each of the properties discussed above including building and chemical usage surveys, exterior soil vapor sampling, interior sub-slab soil vapor sampling, ambient air sampling, indoor air sampling, groundwater sampling, and soil sampling. The data collected from these investigations support the following key takeaways:

- Based on the data collected at each property, the PCE, TCE, and trans-1,2-DCE in groundwater are not present at sufficient concentrations to produce the soil vapor impacts observed at the individual properties evaluated as part of this assessment.
- Based on a review of the various chemicals found at each property, it has been determined that the constituents present at concentrations exceeding the RIASLs, RIASLs₁₂, and/or site-specific criteria in vapor samples collected at each property can be attributed to background sources present at the time of sampling or released to the surrounding environment before sampling.

Based on the results of the site-specific vapor intrusion investigations, the impacts observed (either indoor air or sub-slab vapor results) are not related to a release associated with the LTP site. Therefore, Ford requests concurrence that no additional investigation is required regarding these properties.

Notes:

All units are measured in micrograms per liter (µg/L).

Bold text indicates a concentration above the reporting limit.

This document is a DRAFT document that has not received approval from EGLE. This document was prepared pursuant to a court Consent Decree. The opinions, findings, and conclusions expressed are those of the authors and not those of EGLE.

All samples were analyzed via USEPA Method 8260B or 8260B SIM.

Footnotes:

¹ Residential Drinking Water Criteria are referenced in the EGLE Part 201 Generic Cleanup Criteria, June 2018.

² Residential Volatilization to Indoor Air (VIAC) for Groundwater in Contact (GWIC) Criteria is the Site-Specific Recommended Interim Action Screening Level (RIASL) provided from EGLE.

* Residential Drinking Water Criteria for 1,4-dioxane is derived from EGLE Proposed Rule Changes (September 2016) and Emergency Rules (October 27, 2016).

** Groundwater results for Trichloroethene and Vinyl Chloride are compared to the published EGLE Remediation and Redevelopment Division Target Detection Limit of 1.0 µg/l.

Job ID: 240-126085-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP Off Site

Report Number: 240-126085-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 2/11/2020 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.9° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-126085-1) and MW-214S_020720 (240-126085-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 02/13/2020.

The MS/MSD for batch 240-422674 was not analyzed due to an instrument malfunction: TRIP BLANK (240-126085-1) and MW-214S_020720 (240-126085-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_020720 (240-126085-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The samples were analyzed on 02/12/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: ARCADIS U.S., Inc.
Project/Site: Ford LTP Off-Site

Job ID: 240-130753-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP Off-Site

Report Number: 240-130753-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 5/22/2020 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-130753-1) and MW-214S_052020 (240-130753-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 06/01/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_052020 (240-130753-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The sample was analyzed on 06/02/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Eurofins TestAmerica Canton Sample Receipt Form/Narrative

Login # : 130753

Canton Facility

Client Aradix Site Name _____ Cooler unpacked by: Adam Jensen
 Cooler Received on 5-22-20 Opened on 5-22-20
 FedEx: 1st Grd Exp UPS FAS Clipper Client Drop Off TestAmerica Courier Other _____

Receipt After-hours: Drop-off Date/Time Storage Location

TestAmerica Cooler # 78 Foam Box Client Cooler Box Other _____
 Packing material used: Bubble Wrap Foam Plastic Bag None Other _____
 COOLANT: Wet Ice Blue Ice Dry Ice Water None

1. Cooler temperature upon receipt See Multiple Cooler Form
 IR GUN# IR-10 (CF +0.7 °C) Observed Cooler Temp. 13 °C Corrected Cooler Temp. 26 °C
 IR GUN #IR-11 (CF +0.9 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C
2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity 1 Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 -Were tamper/custody seals intact and uncompromised? Yes No NA
3. Shippers' packing slip attached to the cooler(s)? Yes No
4. Did custody papers accompany the sample(s)? Yes No
5. Were the custody papers relinquished & signed in the appropriate place? Yes No
6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
7. Did all bottles arrive in good condition (Unbroken)? Yes No
8. Could all bottle labels be reconciled with the COC? Yes No
9. Were correct bottle(s) used for the test(s) indicated? Yes No
10. Sufficient quantity received to perform indicated analyses? Yes No
11. Are these work share samples? Yes No
 If yes, Questions 12-16 have been checked at the originating laboratory.
12. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC902937
13. Were VOAs on the COC? Yes No
14. Were air bubbles >6 mm in any VOA vials? Yes No NA Larger than this
15. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # W1970E Yes No
16. Was a LL Hg or Me Hg trip blank present? Yes No

Tests that are not checked for pH by Receiving:
 VOAs
 Oil and Grease

Job ID: 240-134796-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP Off-Site

Report Number: 240-134796-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/12/2020 9:30 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.2° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-134796-1) and MW-214S_081020 (240-134796-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/20/2020.

Sample MW-214S_081020 (240-134796-2)[5X] required dilution prior to analysis due to foaming at the time of purging during the original sample analysis.. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_081020 (240-134796-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The samples were analyzed on 08/18/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job ID: 240-139780-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP - Off Site

Report Number: 240-139780-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 11/7/2020 9:40 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.9° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-139780-1) and MW-214S_110520 (240-139780-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/18/2020.

Vinyl chloride failed the recovery criteria high for LCS 240-461636/4. Refer to the QC report for details.

The continuing calibration verification (CCV) associated with batch 461636 recovered above the upper control limit for Vinyl Chloride. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data have been reported. The associated samples are impacted: TRIP BLANK (240-139780-1) and MW-214S_110520 (240-139780-2).

The laboratory control sample (LCS) for 461636 recovered outside control limits for one or multiple analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported: TRIP BLANK (240-139780-1), MW-214S_110520 (240-139780-2) and (LCS 240-461636/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_110520 (240-139780-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The sample was analyzed on 11/12/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dear Mr. Troy Stevens

The following report includes the data for the above referenced project for sample(s) received on 6/21/2017 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1706395

Ten 1 Liter Summa Canister samples were received on June 21, 2017. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) information for sample SVMP-23-3(061917) did not match the information on the canister with regard to canister identification. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Workorder #: 1709442

Dear Mr. Gustan Taylor

The following report includes the data for the above referenced project for sample(s) received on 9/22/2017 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1709442

Seven 1 Liter Summa Canister samples were received on September 22, 2017. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) information for sample SVMP-26-4(092117) did not match the information on the canister with regard to canister identification. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Gustan Taylor
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: FORD LTP
Project #: MI001386.0001.00002
Workorder #: 1711414

Dear Mr. Gustan Taylor

The following report includes the data for the above referenced project for sample(s) received on 11/22/2017 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1711414

Nine 1 Liter Summa Canister samples were received on November 22, 2017. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) information for samples SVMP-25S-3(112117) and SVMP-25D-6(112117) did not match the entries on the sample tags with regard to sample identification. Therefore the information on the COC was used to process and report the samples.

The number of samples received did not match the information on the Chain of Custody (COC). Sample SVMP-15-2(112017) was added to the analytical request.

Sample identification for sample SVMP-28-3(112117) was not provided on the sample tag. Therefore the information on the Chain of Custody was used to process and report the sample.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

3/7/2018

Mr. Gustan Taylor
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: FORD LTP
Project #: MI001386.0001.00002
Workorder #: 1802456

Dear Mr. Gustan Taylor

The following report includes the data for the above referenced project for sample(s) received on 2/22/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1802456

Fourteen 1 Liter Summa Canister samples were received on February 22, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There was a difference (greater than or equal to 5.0" Hg) between the measured canister receipt vacuum and that which was reported on the Chain of Custody (COC) for sample SVMP-2D-8.5 (021918). A leak test indicated that the valve was functioning properly.

Analytical Notes

Dilution was performed on samples SVMP-2S-4.5 (021918) and SVMP-2D-8.5 (021918) due to the presence of high level non-target species.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Novi MI 48377

Project Name: FORD LTP
Project #: MI001454.0004.00003
Workorder #: 1806042

Dear Mr. Gustan Taylor

The following report includes the data for the above referenced project for sample(s) received on 6/1/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1806042

Fifteen 1 Liter Summa Canister samples were received on June 01, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) information for sample SVMP-25S-3(052918) did not match the information on the canister with regard to canister identification. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

Sample collection date was not provided on the Chain of Custody (COC) for samples DUP-02(053018). The sampling date was taken from the tag.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Workorder #: 1808627

Dear Mr. Gustan Taylor

The following report includes the data for the above referenced project for sample(s) received on 8/27/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1808627

Eight 1 Liter Summa Canister samples were received on August 27, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) was not relinquished properly. A signature, date and time were not provided by the field sampler.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

**Summary of Detected Compounds

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #: MI001454.0004.00003
Workorder #: 1811197

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/9/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1811197

Sixteen 1 Liter Summa Canister samples were received on November 09, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #: MI001454.0006
Workorder #: 1903633R1

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 3/26/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1903633R1

Ten 1 Liter Summa Canister (100% Certified) samples were received on March 26, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

Sample SVMP-35-3.5_032119 was cancelled on 03/28/2019 per client's request.

The work order was reissued on 4/11/2019 to correct identification of samples SVMP-3S-3.5_032119 and SVMP-3D-7_032119 due to laboratory transcription error.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1906589

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 6/27/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1906589

Ten 1 Liter Summa Canister (100% Certified) samples were received on June 27, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

All Quality Control Limit exceedances and affected sample results are noted by flags. Each flag is defined at the bottom of this Case Narrative and on each Sample Result Summary page.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1811416

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/20/2018 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1811416

Fourteen 6 Liter Summa Canister (100% Certified) samples were received on November 20, 2018. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. All The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on samples IAF-12400Belden-01_111518, IAF-12400Belden-02_111518, IAF-12400Belden-03_111518, IAF-12400Belden-04_111518, IAF-12400Belden-05_111518, IAF-12400Belden-06_111518, IAF-12400Belden-09_111518, IAF-12400Belden-10_111518, IAF-12400Belden-11_111518, IAF-12400Belden-12_111518 and DUP-01 due to the presence of high level target species.

Dilution was performed on samples IAF-12400Belden-07_111518 and IAF-12400Belden-08_111518 due to the presence of high level non-target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #: MI001454.0003
Workorder #: 1904294

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/12/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

 TX NELAP - T104704434-16-11, UT NELAP CA0093332016-7, VA NELAP - 8113, WA NELAP - C935
 Name of Accreditation Body: NELAP/ORELAP (Oregon Environmental Laboratory Accreditation Program)
 Accreditation number: CA300005, Effective date: 10/18/2016, Expiration date: 10/17/2017.

Eurofins Air Toxics Inc.. certifies that the test results contained in this report meet all requirements of the NELAC standards

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1904294

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on April 12, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Samples IAF-12400BELDEN-01_040919, IAF-12400BELDEN-02_040919, IAF-12400BELDEN-03_040919, IAF-12400BELDEN-04_040919, IAF-12400BELDEN05_040919, IAF-12400BELDEN-06_040919, IAF-12400BELDEN-07_040919, IAF-12400BELDEN-08_040919, IAF-12400BELDEN-09_040919, IAF-12400BELDEN-10_040919, IAF-12400BELDEN-11_040919 and IAF-12400BELDEN-12_040919 were transferred from Low Level analysis to full scan TO-15 due to high levels of target compounds.

Dilution was performed on samples IAF-12400BELDEN-01_040919, IAF-12400BELDEN-02_040919, IAF-12400BELDEN-03_040919, IAF-12400BELDEN-04_040919, IAF-12400BELDEN05_040919, IAF-12400BELDEN-06_040919, IAF-12400BELDEN-07_040919, IAF-12400BELDEN-08_040919, IAF-12400BELDEN-09_040919, IAF-12400BELDEN-10_040919, IAF-12400BELDEN-11_040919 and IAF-12400BELDEN-12_040919 due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

9/28/2020

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #: 30050315
Workorder #: 2009561

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 9/21/2020 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 2009561

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on September 21, 2020. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
- UJ- Non-detected compound associated with low bias in the CCV
- N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

- a-File was requantified
- b-File was quantified by a second column and detector
- r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP

Project #:

Workorder #: 2009565

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 9/21/2020 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 2009565

Twelve 1 Liter Summa Canister (100% Certified) samples were received on September 21, 2020. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 2012710

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/30/2020 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 2012710

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on December 30, 2020. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 2012711

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/30/2020 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 2012711

Twelve 1 Liter Summa Canister (100% Certified) samples were received on December 30, 2020. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP

Project #:

Workorder #: 1904296

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/12/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1904296

Thirteen 1 Liter Summa Canister (100% Certified) samples were received on April 12, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Dilution was performed on sample SSMP-12400BELDEN-11_040919 due to the presence of high level target species.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Subject: Livonia Transmission Plant - 24 Hr Notice

Brandon –

This email serves as the 24-hour notification for an exceedance as it relates to offsite vapor intrusion assessment conducted under the approval letter provided by the MDEQ for the VI RespAP.

Analytical results within a commercial building located at 12400 Belden Court indicated that detections were present for trans-1,2-Dichloroethene (trans-1,2-DCE), cis-1,2-Dichloroethene, 1,1-Dichloroethene, and vinyl chloride in the soil gas collected from the sub-slab monitoring points (SSMP) beneath the building. Soil gas results also indicated exceedances above the screening criteria that has been provided by the MDEQ for Trichloroethene (TCE). TCE exceeded the criteria at 10 of 12 locations and ranged from 160 - 3300 ug/m³.

Indoor air analytical results were compared to the *Volatilization to Indoor Air Recommendations of Interim Action Screening Levels and Time Sensitive Interim Action Screening Level* and indicated an exceedance for TCE and detections of trans-1,2-Dichloroethene. The concentration of TCE for the 12 indoor air samples that exceeded was 270 - 340 ug/m³.

A detailed chemical inventory was completed at the facility. The team identified a large variety of chemicals that are being used inside the facility including aerosol canisters of chlorinated solvents, which the contents contain TCE, Tetrachloroethene, and trans-1,2-DCE. Based on the documented use of TCE and other industrial chlorinated compounds inside the space, MIOSHA standards for indoor air exposure may be more appropriate for use than the RIASLs. In addition, TCE has not been detected in groundwater or soil gas collected near 12400 Belden Court facility.

Arcadis will provide a response memo providing additional information for the property, similar to previous submittals. The property owners has been provided the data package, that contained the analytical results.

Thank you

Subject: Livonia Transmission Plant - 24 Hr Notification 12400 Belden Ct
Attachments: 12400 Belden Data Package.pdf

Hi Brandon –

This email serves as the notification for an exceedance as it relates to the offsite vapor intrusion assessment conducted under the approval letter provided by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) for the Vapor Intrusion (VI) Response Activity Plan (RespAP).

Analytical results from the fourth round of sampling at the commercial property located at 12400 Belden Court indicated that trichloroethene (TCE) was detected in sub-slab soil vapor collected from the property above the site-specific screening level of 130 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) provided by EGLE for this project on October 30, 2018. TCE was detected above the screening level in sub-slab soil vapor samples SSMP-12400BELDEN-09_122220, SSMP-12400BELDEN-10_122220, SSMP-12400BELDEN-11_122220, and SSMP-12400BELDEN-12_122220 at concentrations ranging from 140 to 400 $\mu\text{g}/\text{m}^3$. All indoor air and ambient air sample results were below the TCE indoor air screening level of 4.0 $\mu\text{g}/\text{m}^3$. Although other site-related constituents of concern were detected in sub-slab soil vapor, no other exceedances of respective screening levels were noted.

Detailed chemical inventories were completed at this property prior to all sampling events (November 2018, April 2019, September 2020, and December 2020). As stated in previous notifications of exceedances, Arcadis learned from Advanced Technology Services (ATS), the former building tenant, that ATS had operated in this space for 16 years. ATS had repaired industrial equipment during the November 2018 and April 2019 sampling events. This tenant used chlorinated solvents in the workplace regularly, had degreasing equipment, and an aerosol recycler that captured excess liquid including chlorinated compounds in a drum. ATS staff indicated to Arcadis field personnel that chemicals containing TCE and other solvents would be in use during indoor air sampling conducted during April 2019. Photos taken during the November 2018 event documenting the presence of chlorinated compounds inside the space are presented below and included products containing TCE, tetrachloroethene (PCE) and trans-1,2-dichloroethene (trans-1,2-DCE). Additional photos show a degreaser (there were multiple), the aerosol can crusher, supplies of aerosols, a scrap metal bin (there were multiple) where chlorinated canisters were disposed of, and a waste solvent drum. The products shown in the photos below were also present during the April 2019 event.

Figure 1. Product used by tenant containing trans-1,2-dichloroethene (trans-1,2-DCE).

Figure 2. Product used by tenant containing tetrachloroethene (PCE).

Figure 3. Product used by tenant containing trichloroethene (TCE).

Figure 4. Supplies of aerosols (including products shown in Figures 1 through 3) being stored and used by previous tenant.

Figure 5. Degreaser drum (there were multiple).

Figure 6. A scrap metal bin (there were multiple) with various products for recycling, including those presented in Figures 1 through 4.

Figure 7. A scrap metal bin (there were multiple) with various products for recycling in the aerosol recycler, including those presented in Figures 1 through 4.

Figure 8. Aerosol recycler/can crusher.

Figure 9. Waste solvent drum.

This tenant vacated the property in July 2020 and the building was unoccupied for the September and December 2020 sampling events. In the September and December 2020 sampling events, several potential sources of volatile organic compounds (VOCs) were present (household cleaners and a can of instant tire repair material), but none of the above-pictured products or materials were present as the tenant had vacated the property. Floor drains, cracks in the slab of the building, and pipes penetrating the slab were noted during the chemical inventories. The previous tenant reported that the floor drains tie into the municipal sewer. Floor drains and pipes penetrating the slab are shown in photos below.

Figure 10. Sink with pipe penetrating the slab.

Figure 11. Floor drain and locations where pipes had previously penetrated the slab.

As shown in **Table 1**, exceedances of TCE and trans-1,2-DCE in indoor air only occurred while the former tenant was occupying the building. Analytical results for TCE and trans-1,2-DCE in indoor air were significantly lower and did not exceed criteria once the building became unoccupied.

IAF-10	240	320	12,000	5,700	2.4	2.4	<0.74	0.53 J
IAF-11	210	300	7,100	5,400	2.3	2.5	0.59 J	0.57 J
IAF-12	230	330	6,600	4,900	2.3	2.6	<0.72	0.51 J

1. Results presented are in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$).
2. All samples were analyzed via modified United States Environmental Protection Agency (USEPA) Method TO-15.
3. **Bold** indicates exceedance of criteria.
4. Sample names have been shortened for simplicity.
5. Indoor air samples were collected in June 2020, however, sub-slab soil vapor samples were unable to be collected concurrently due to health and safety concerns, so data from these indoor air samples is not shown.
6. Duplicate and ambient air sample results collected from the property are not shown.
7. R = Rejected Sample.

- 8. < = Not detected above the reporting limit.
 - 9. J = Estimated Value.
- Non-Residential Recommended Interim Action Screening Levels (RIASL) appropriate for exposures of 12 hours as provided by EGLE in August 2017 and updated in January 2020.

As shown in **Table 2**, analytical results for TCE and trans-1,2-DCE in sub-slab soil vapor were also significantly lower once the building became unoccupied. During the September and December 2020 sampling events, pressure readings were collected using a micromanometer from all sub-slab sampling locations. During the September and December 2020 sampling events, negative pressure readings were recorded at four and eleven of the sub-slab points, respectively, indicating that vapor could be migrating from indoor air to sub-slab in some areas. Therefore, any remaining TCE in the sub-slab can likely be attributed to residual TCE in indoor air as a result of the former tenant’s operations that is migrating to sub slab through floor drains, cracks in the slab of the building, and pipes penetrating the slab.

SSMP-12	540	1,100	200	460	29	140

Notes:

- 1. Results presented are in ug/m³.
- 2. All samples were analyzed via modified USEPA Method TO-15.
- 3. **Bold** indicates exceedance of criteria.
- 4. Sample names have been shortened for simplicity.
- 5. All sub-slab data collected during the November 2018 sampling event was rejected.
- 6. Duplicate sample results collected from the property are not shown.
- 7. J = estimated result.
- 8. < = Not detected above the reporting limit.

Nonresidential Volatilization to Indoor Air Criteria (adjusted for a 12-hr work-day exposure in a slab-on-grade building less than 50,000 square-feet) were provided in the Consent Decree by EGLE on 10/30/2018.

Shallow groundwater monitoring wells MW-54S (screened 4.5 – 9.5 feet below ground surface (bgs)) and MW-214S (screened 5.5-10.5 feet bgs) are located approximately 250 feet and 60 feet upgradient (west) of this property, respectively. Monitoring Well MW-54S has been sampled seven times with each sampling event being non-detect for TCE and trans-1,2-DCE. Monitoring well MW-214S, which was requested by EGLE in the July 17, 2019 Letter, has been sampled three times with each sampling event being non-detect for TCE and trans-1,2-DCE. Additionally, nested soil vapor monitoring points SVMP-25S and SVMP-25D are located approximately 190 feet southwest of this property and have been sampled nine times with each result being non-detect for trans-1,2-DCE and TCE except for one detection of

TCE (1.3 J) in the June 2019 sampling event, which is well below the residential (conservative assessment) Recommended Interim Action Screening Level (RIASL) of 67 ug/m³. These lines of evidence show that a groundwater source of TCE or trans-1,2-DCE is not present in this area.

As discussed above, multiple lines of evidence have been used to assess the vapor intrusion risk to the building. Exceedances of screening levels for indoor air and sub-slab can be attributed to background sources and is not related to the vinyl chloride impacts in groundwater offsite.

The December 2020 sampling event was the last sampling event scheduled for the property. Over the course of the four VI sampling events completed, Arcadis has found that concentrations of TCE and trans-1,2-DCE have declined in all samples collected at the property due to the absence of contributing background sources from the former tenant.

The property owner has been provided the data package (attached), that contains the analytical results.

Thank you

Hey Brandon -

This email serves as the notification for an exceedance as it relates to the offsite vapor intrusion assessment conducted under the approval letter provided by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) for the Vapor Intrusion (VI) Response Activity Plan (RespAP).

Analytical results from the third round of sampling at the commercial property located at 12400 Belden Court indicated that trichloroethene (TCE) was detected in sub-slab soil vapor collected from the property above the site-specific screening level of 130 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) provided by EGLE for this project on October 30, 2018. TCE was detected in all 12 sub-slab soil vapor samples collected with concentrations ranging from 21 to 900 $\mu\text{g}/\text{m}^3$. TCE was detected above the screening level in sub-slab soil vapor samples SSMP-12400BELDEN-01_091520, SSMP-12400BELDEN-03_091520, SSMP-12400BELDEN-06_091520, SSMP-12400BELDEN-08_091520, SSMP-12400BELDEN-09_091520, SSMP-12400BELDEN-10_091520, SSMP-12400BELDEN-11_091520, and SSMP-12400BELDEN-12_091520 at concentrations ranging from 240 to 900 $\mu\text{g}/\text{m}^3$. TCE was detected in all indoor air samples collected at the property at concentrations ranging from 1.9 to 2.6 $\mu\text{g}/\text{m}^3$ but was not detected in the ambient air sample. All indoor air results were below the TCE indoor air screening level of 4.0 $\mu\text{g}/\text{m}^3$. Although other site-related constituents of concern were detected in sub-slab soil vapor and indoor air, no other exceedances of respective screening levels were noted.

Detailed chemical inventories were completed at this property prior to all sampling events (November 2018, April 2019, and September 2020). Arcadis learned from the building tenant (Advanced Technology Services) that the occupant of the space present during the November 2018 and April 2019 sampling events repaired industrial equipment and had operated in this space for 16 years. This tenant used chlorinated solvents in the workplace regularly, had degreasing equipment, and an aerosol recycler that captured excess liquid including chlorinated compounds in a drum. On-site staff indicated to Arcadis field personnel that chemicals containing TCE and other solvents would be in use during indoor air sampling conducted during April 2019. Photos documenting the presence of chlorinated compounds inside the space are presented below and included products containing TCE, tetrachloroethene (PCE) and trans-1,2-dichloroethene (trans-1,2-DCE). Additional photos show a degreaser (there were multiple), the aerosol can crusher, supplies of aerosols, a scrap metal bin (there were multiple) where chlorinated canisters were disposed of, and a waste solvent drum.

Figure 1. Product used by tenant containing trans-1,2-dichloroethene (trans-1,2-DCE).

Figure 2. Product used by tenant containing tetrachloroethene (PCE).

Figure 3. Product used by tenant containing trichloroethene (TCE).

Figure 4. Supplies of aerosols (including products shown in Figures 1 through 3) being stored and used by previous tenant.

Figure 5. Degreaser drum (there were multiple).

Figure 6. A scrap metal bin (there were multiple) with various products for recycling, including those presented in Figures 1 through 4.

Figure 7. A scrap metal bin (there were multiple) with various products for recycling in the aerosol recycler, including those presented in Figures 1 through 4.

Figure 8. Aerosol recycler/can crusher.

Figure 9. Waste solvent drum.

This tenant vacated the property in July 2020 and the building was unoccupied for the September 2020 sampling event. The chemical inventory completed prior to the September 2020 sampling event indicated that a number of potential sources of VOCs were present (household cleaners and a can of instant tire repair material), but none of the above-pictured products or materials were present due to the tenant vacating the property. Floor drains, cracks in the slab of the building, and pipes penetrating the slab were noted during the chemical inventory. The previous tenant reported that the floor drains tie into the municipal sewer. Floor drains and pipes penetrating the slab are shown in photos below.

Figure 10. Sink with pipe penetrating the slab.

Figure 11. Floor drain and locations where pipes had previously penetrated the slab.

Data from all sampling events is presented below in **Table 1** and **Table 2**.

As shown in **Table 1**, exceedances of TCE and trans-1,2-DCE in indoor air only occurred while the former tenant was occupying the building. Analytical results for TCE and trans-1,2-DCE in indoor air were significantly lower and did not exceed criteria once the building became unoccupied.

As shown in **Table 2**, analytical results for TCE and trans-1,2-DCE in sub-slab soil vapor were also significantly lower once the building became unoccupied. During the September 2020 sampling event, pressure readings were collected using a micromanometer from all sub-slab sampling locations. A negative pressure reading was recorded at four of the sub-slab points, indicating that vapor could be migrating from indoor air to sub-slab in some areas. Therefore, any remaining TCE in the sub-slab can likely be attributed to residual TCE in indoor air as a result of the former tenant’s operations that is migrating to sub slab through floor drains, cracks in the slab of the building, and pipes penetrating the slab.

Table 2. 12400 Belden Court Analytical Results – Soil Gas

Property Status	Occupied		Unoccupied	
Sample Date	4/9/2019		9/15/2020	
Constituent of Concern	trans-1,2-DCE	TCE	trans-1,2-DCE	TCE
Nonresidential Site-Specific Criteria	8200	130	8200	130
SSMP-01	380	1,200	36	390
SSMP-02	150	270	2.0 J	81

SSMP-11	2,300	2,900	820	690
SSMP-12	540	1,100	200	460

- Notes:
1. Results presented are in ug/m3.
 2. All samples were analyzed via modified USEPA Method TO-15.
 3. **Bold** indicates exceedance of criteria.
 4. Sample names have been shortened for simplicity.
 5. All sub-slab data collected during the November 2018 sampling event was rejected.
 6. Duplicate sample results collected from the property are not shown.
 7. J = estimated result.
 8. Nonresidential Site-Specific Criteria = Non-Residential Volatilization to Indoor Air Criteria adjusted for 12 hour work-day exposure. Slab-on-grade, <50,000 sqft. Provided by EGLE 10/30/2018.

Shallow groundwater monitoring wells MW-54S (screened 4.5 – 9.5 feet below ground surface (bgs)) and MW-72S (screened 3-13 feet bgs) are located approximately 250 feet upgradient (west) and 190 feet south of this property, respectively. Monitoring Well MW-54S has been sampled seven times with each sampling event being non-detect for TCE and trans-1,2-DCE. Monitoring Well MW-72S has been sampled eight times with each sampling event being non-detect for TCE and trans-1,2-DCE. Additionally, nested soil vapor monitoring points SVMP-25S and SVMP-25D are located approximately 190 feet southwest of this property and have been sampled nine times with each result being non-detect for trans-1,2-DCE and TCE except for one detection of TCE (1.3 J) in the June 2019 sampling event, which is well below the residential (conservative assessment) Recommended Interim Action Screening Level (RIASL) of 67 ug/m³. These lines of evidence show that a groundwater source of TCE or trans-1,2-DCE is not present in this area.

As discussed above, multiple lines of evidence have been used to assess the vapor intrusion risk to the building. Exceedances of screening levels for indoor air and sub-slab can be attributed to background sources and is not related to the vinyl chloride impacts in groundwater offsite.

The last sampling event for this property is tentatively scheduled for December 2020. As long as the space continues to be unoccupied, Arcadis expects concentrations of TCE and trans-1,2-DCE to continue to decline in all samples collected at the property due to the absence of contributing background sources.

The property owner has been provided the data package (attached), that contains the analytical results.

Attachments: 12400 Belden Data Package.pdf

Brandon –

This email serves as the notification for an exceedance as it relates to offsite vapor intrusion assessment conducted under the approval letter provided by the MDEQ for the VI RespAP.

Analytical results from the commercial property at 12400 Belden Court indicated that TCE was detected in indoor air collected from the property above the *Volatilization to Indoor Air Interim Action Screening Levels and Time Sensitive Interim Action Screening Level* presented by MDEQ in the Consent Decree. TCE was detected in all 12 indoor air samples collected with concentrations ranging from 4,900 to 10,000 $\mu\text{g}/\text{m}^3$. TCE was detected in the concurrently collected ambient air sample and ambient air duplicate sample at concentrations of 3.2 and 55 $\mu\text{g}/\text{m}^3$, respectively. Trans-1,2-dichloroethene was also detected in all 12 indoor air samples at a range of concentrations from 6,600 to 14,000 $\mu\text{g}/\text{m}^3$, all exceeding the RIASL of 790 $\mu\text{g}/\text{m}^3$. Sub-slab soil gas results for TCE exceeded the soil gas criteria of 130 $\mu\text{g}/\text{m}^3$ in all 12 collected samples. Sub-slab TCE concentrations ranged from 170 $\mu\text{g}/\text{m}^3$ to 2,900 $\mu\text{g}/\text{m}^3$. Although other chlorinated compounds were detected in sub-slab soil vapor, no other exceedances of the screening levels provided by the MDEQ were noted.

This property was originally sampled in December 2018 and exceedances of the TCE screening level were noted in the first round of sampling.

A detailed chemical inventory was completed in this property. The current occupant of the space repairs industrial equipment and has operated in this space for 16 years. The current tenant uses chlorinated solvents in the workplace regularly, has degreasing equipment, and an aerosol recycler that captures excess liquid including chlorinated compounds in a drum.

Based on the documented use of TCE and other industrial chemicals inside the space, MIOSHA standards for indoor air exposure may be more appropriate for use than the RIASLs. Arcadis will provide a response memo providing additional information for the property, similar to previous submittals. The property owner has been provided the data package (attached), that contains the analytical results.

Thank you

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP Off Site

Report Number: 240-126085-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 2/11/2020 8:40 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.9° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-126085-1) and MW-214S_020720 (240-126085-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 02/13/2020.

The MS/MSD for batch 240-422674 was not analyzed due to an instrument malfunction: TRIP BLANK (240-126085-1) and MW-214S_020720 (240-126085-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_020720 (240-126085-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The samples were analyzed on 02/12/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA VERIFICATION REPORT

February 14, 2020

Kris Hinskey
Arcadis Inc
10559 Citation Ave
Suite 100
Brighton, MI 48116

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: 30042006.0402.02
Event Specific Scope of Work References: Sample COC
Laboratory: TestAmerica - North Canton
Laboratory submittal: 126085-1
Sample date: 2020-02-07
Report received by CADENA: 2020-02-14
Initial Data Verification completed by CADENA: 2020-02-14
Number of Samples:2
Sample Matrices:Water
Test Categories:GCMS VOC

Please see attached criteria report or sample result/qualified analytical result summary for qualifier flags assigned to sample data.

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch MS/MSD issues as noted in the laboratory submittal case narrative were not used to qualify client sample results as part of this level 2 data package verification review.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Livonia, Michigan

Volatile Organic Compounds (VOC) Analysis

SDG # 240-126085-1

CADENA Verification Report: 2020-02-14

Analyses Performed By:

TestAmerica

Edison, New Jersey

Report #36040R

Review Level: Tier III

Project: 30042006.0402.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 240-126085-1 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III) includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						VOC (Full Scan)	VOC (SIM)	MISC
240-126085-1	TRIP BLANK	240-126085-1	Water	2/7/2020		X		
	MW-214S_020720	240-126085-2	Water	2/7/2020		X	X	

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8260B and 8260B SIM. Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260B/8260B-SIM	Water	14 days from collection to analysis	Cool to < 6 °C; pH < 2 with HCl

All samples were analyzed within the specified holding time criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not performed on a sample within this SDG.

6. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

No compounds were detected in the samples within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: 8260B/8260B-SIM	Reported		Performance Acceptable		Not Required

2020-01-16, Caitlin Cisco, Utility locate

Created	2020-01-16 18:57:59 UTC by Caitlin Cisco
Updated	2020-01-16 19:10:49 UTC by Caitlin Cisco
Location	42.3681709751605, -83.3900576319963

Basic Information

Project Name	Ford LTP
Task	Utility locate
Location	Livonia, MI
Date	2020-01-16
Completed By	Caitlin Cisco
Are you connected to the internet (WiFi or data plan)?	Yes
Get weather data from the National Weather Service website for your current location?	N/A
Weather	30.02 degrees F and Light Snow
PPE	Level D
Are you using equipment?	No

Daily Log of Activities

13:57, All staff arrive on-site. C. Cisco and C. Weaver (Arcadis), R. Moore (Fibertec). Purpose: utility locate at 12400 Belden Ct.

Time	13:57
Description of Task	All staff arrive on-site. C. Cisco and C. Weaver (Arcadis), R. Moore (Fibertec). Purpose: utility locate at 12400 Belden Ct.

14:10, Utility locate complete, all staff off-site.

Time	14:10
Description of Task	Utility locate complete, all staff off-site.

Waste Management

Are there any waste drums onsite?	No
Did you drum any waste today?	No

Daily Log

Project No.: 30016342 .0001B - Data Gap Evaluation Page 1 of 1
 Site Location: Ford LTP - Commercial Belden Ct. (MW-214)^{aw}
 Prepared By: Christina Weaver (Location 14)

Date	Time	Description of Activities
1/21/2020	—	Purpose: offsite MW installation
	0744	Weather: 21 °F, Cloudy, W 9 mph Wind
	—	Arcadis: C. Weaver
	—	Fibertec: M. Ryerson J. Vanmeter
	—	Equipment: RID (5937) bump checked 105/100 rpm
	—	Arcadis ^{aw} or WLM (6018) checked
	0800	Arcadis and Fibertec onsite, Health and Safety meeting.
	0815	Mobilize to MW-2145 (Location 14) at end of Belden Ct. Commercial property parking lot west of HTS Commercial building.
	0820	Use saw to cut through asphalt
	0845	Hand auger down to 5.0' bgs
	0900	Boeing appears wet at 8.0' bgs, use direct push down to 15.0' bgs.
	0905	Run augers down to 12.0' bgs, Pop out plug
	0920	OTW = 7.54' bgs I. Acrost approves screen interval 5.5 - 10.5' bgs.
	0940	Finish well install, set concrete pad.
	1010	Arcadis and Fibertec offsite. after decor.

Are you using equipment?	Yes

PID

Supplier	Geotech
Type of Equipment (GEM, PID, etc)	PID
Model	Minirae 3000
Pine/Geotech Number	5937
Calibrated?	Yes
Calibration standard information	Pass

Daily Log of Activities

08:00, Arcadis onsite

Time	08:00
Description of Task	Arcadis onsite

08:05, Tailgate meeting

Time	08:05
Description of Task	Tailgate meeting

13:50, Mob to MW-214S, fibertec breaks for lunch

Time	13:50
Description of Task	Mob to MW-214S, fibertec breaks for lunch

14:25, Begin developing MW-214S

Time	14:25
Description of Task	Begin developing MW-214S

15:05, Mob back to site

Time	15:05
Description of Task	Mob back to site

15:10, Unload drums, move under overhang

Time	15:10
Description of Task	Unload drums, move under overhang

15:45, Arcadis and fibertec offsite

Time	15:45
Description of Task	Arcadis and fibertec offsite

Waste Management

Are there any waste drums onsite?	No
Did you drum any waste today?	Yes
Number of drums created during activities	3
Size of drums	55-gallon
Type of Drums	Stainless Steel

Condition of drums

Good

Signature

A handwritten signature in black ink, consisting of several overlapping loops and a long vertical stroke on the left side.

- W.L. Water Level
- TD Total Depth
- DTW Depth To Water
- DTP Depth To Product

THIS FORM MUST BE COMPLETED IN ENTIRETY PRIOR TO BEGINNING ANY INTRUSIVE WORK

Project: FD-01 LTP
 Project Number: 30214201
 Form Completion Date: 01/11/2020 Form Expiration Date: 12/15/2020
 All utility markings must be refreshed ≤ 15 days when work is ongoing. (15 business days post form completion date)

Pre-Field Work

Required: One Call or "811" notified 48-72 hours in advance of work? # ADVISORS
 Ticket Expiration Date 04/27/2020 (Review State Requirements)

Utility companies notified during the One Call process: See attached ticket
ELEC FIBER OPTIC SEWER
GAS STEAM WATER

List any other utilities requiring notification: None

Private Locator Contacted Yes No

Plan private utility clearance subcontractor assignments, areas, required clearance equipment, depth of clearance needed, types of utilities. When possible re-clear 811 markings to confirm utility locations.

Client provided utility maps or "as built" drawings showing utilities? Yes No

Field Work - This must be completed on site, by staff who have a minimum of one year of field experience in identifying utilities. Review Check list with PM or designee prior to beginning intrusive work.

Mechanized intrusive work in utility Tolerance Zone (<30-in.) requires pre-approval by Corporate H&S

List Soil Boring / Well IDs or Excavation Locations applicable to this clearance checklist:
Location 11 - off site at 11150 BEDFORD ST

3 Reliable Lines of Evidence Required Prior to Starting any Subsurface Intrusive Work

One Call/"811" (Reliable as a line of evidence when working in public right of way or easement)
 Utility Markings Present: Paint Pin flags/stakes Other None

Client Provided Maps/Drawings **OR** Maps/Drawings requested but not provided

Client Clearance Name(s)/Affiliation(s) _____

Interview(s) Name(s)/Affiliation(s) _____

Did person(s) interviewed indicate depths of any utilities in the subsurface?
 Yes, depths provided Did not know or refused to answer

Additional Comments:

Site Inspection (Complete Page 2 & Photo Document Marked Utilities & Utility Structures)

Metal Detector

Soft Dig Methods

Termination Depth 5-10 ft. bgs

Potholing / Vacuum Extraction

Air knife -- Hydro knife

Probing

Hand Auguring

Other: _____

Marine Locator (Name and Company) _____

- Tips for Successful Utility Location (H&S Standard Section 5.6):**
1. Don't forget to look up (mark above grade utilities if warranted)
 2. Be on site with Private Utility Locators
 3. Ask Private Locators to "confirm" other's markings
 4. Select alternate/backup locations during clearance process
 5. Mark out all known utilities. Leave nothing to question
 6. No hammering - no pickaxes - no digging bars - no shortcutting
 7. No excessive turning or downward force of hand augers/shovels
 8. Utilities may run in or directly under asphalt/concrete
 9. Clearing, grubbing, and heavy equipment may damage shallow utilities
 10. Is Spotter needed for Heavy Equipment near aboveground utilities?

During the site inspection look for the following: ("YES" requires additional investigation and the utility must be marked properly prior to beginning subsurface intrusive work):

Site Inspection	Utility Color Codes	Present
A) Natural gas line present (evidence of a gas meter)?	Yellow	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
i) Feeder Lines to buildings or homes?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
B) Evidence of electric lines:	Red	
i) Conduits to ground from electric meter or along wall?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
ii) Conduits from power poles running into ground?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
iii) Light poles, electric devices with no overhead lines?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <i>at work</i>
iv) Overhead electric lines present? Marked? (See Section L)		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
C) Evidence of sewer drains:	Green	
i) Restrooms or kitchen on site?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
ii) Sewer cleanouts present?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
iii) Combined sewer /storm lines or multiple sewer lines?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <i>at work</i>
D) Evidence of water lines:	Blue	
i) Water meter on site or multiple water lines?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
ii) Fire hydrants in vicinity of work?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <i>at work</i>
iii) Irrigation systems? (Sprinkler heads, valve boxes, controls in building)		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
E) Evidence of storm drains:	Green	
i) Open curbside or slotted grate storm drains		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
ii) Gutter down spouts going into ground		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <i>at work</i>
F) Evidence of telecommunication lines:	Orange	
i) Fiber optic warning signs in areas?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
ii) Aboveground cable boxes or housings or wires in work area? Marked?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
G) Underground storage tanks:		
i) Tank pit present, tank vent present?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
ii) Product lines running to dispensers/buildings?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
H) Do utilities enter or exit existing structures/buildings?		
If Yes, confirm the utility markings outside of structure/building match up:		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
I) Proposed excavation marked in white?	White	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
J) Unclassified utilities / anomalies marked in pink?	Pink	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
K) Overhead Utilities/Communication Lines - Look Up and MARK:		
i) Overhead electrical conduit, pipe chases, cable trays, product lines?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
ii) Overhead fire sprinkler system?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <i>at work</i>
L) Overhead Power lines in or near the work area:		
i) < 50 kV within 10 ft. of work area?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <i>at work</i>
ii) >50 - 200 kV within 15 ft. of work area?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
iii) >200-350 kV within 20 ft. of work area?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
iv) >350-500 kV within 25 ft. of work area?		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
v) >500-750 kV within 35 ft. of work area?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
vi) >750-1000 kV within 45 ft. of work area?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
M) Other:		
i) Evidence of linear asphalt or concrete repair?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
ii) Evidence of linear ground subsidence or change in vegetation?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
iii) Unmarked manholes or valve covers in work area?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
iv) Warning signs (Call Before you Dig, Look Up, etc.) on or adjacent to site?		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
v) Utility color markings not illustrated in this checklist? Purple		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
vi) Operating heavy equipment on unpaved/unimproved ground: review equipment route for shallow utilities crossing it and modify if necessary.		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
N) Utilities & Structures Checklist been reviewed by the PM or Designee		<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No*
PM or Designee Name: <u>MRS HINSLER</u>		* if no, STOP WORK, call PM

Name and Signature of person completing the checklist: SARAH WISCO / Christina Weiser
 Date: 01/11/2020 CHRISTINA WEISER

Do not perform mechanized intrusive work within 30 inches of a utility marking without receiving pre-approval by Corporate H&S.

ALL UTILITY STRIKES REQUIRE CORPORATE H&S NOTIFICATION (EMAIL OR CALL) WITH A CONFIRMED RESPONSE

Drilling Fluid NA

Development Technique(s) and Date(s)
1/23/20

Submersible Pump, PVC surge block

Fluid Loss During Drilling NA gallons

Water Removed During Development 24.41 gallons

Static Depth to Water 6.94 feet below M.P.

Pumping Depth to Water 7.37 feet below M.P.

Pumping Duration 33 mins

Yield 0.74 gpm Date 1/23/2020

Specific Capacity 1.72 gpm/ft
2800 mL/min

Well Purpose Monitoring

Remarks Surged at: 1432 second surge: 1454

Definitions/Glossary

Client: ARCADIS U.S., Inc.
Project/Site: Ford LTP Off-Site

Job ID: 240-130753-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP Off-Site

Report Number: 240-130753-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 5/22/2020 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-130753-1) and MW-214S_052020 (240-130753-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 06/01/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_052020 (240-130753-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The sample was analyzed on 06/02/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: 30050315.0402.04 off site
Event Specific Scope of Work References: Sample COC
Laboratory: TestAmerica - North Canton
Laboratory submittal: 130753-1
Sample date: 2020-05-20
Report received by CADENA: 2020-06-08
Initial Data Verification completed by CADENA: 2020-06-08
Number of Samples:2
Sample Matrices:Water
Test Categories:GCMS VOC

Please see attached criteria report or sample result/qualified analytical result summary for qualifier flags assigned to sample data.

There were no significant QC anomalies or exceptions to report.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) Analysis

SDG # 240-130753-1

CADENA Verification Report: 2020-06-08

Analyses Performed By:
TestAmerica
Edison, New Jersey

Report #37196R
Review Level: Tier III
Project: 30050315.402.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 240-130753-1 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III) includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						VOC (Full Scan)	VOC (SIM)	MISC
240-130753-1	TRIP BLANK	240-130753-1	Water	5/20/2020		X		
	MW-214S_052020	240-130753-2	Water	5/20/2020		X	X	

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8260B and 8260B SIM. Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260B/8260B-SIM	Water	14 days from collection to analysis	Cool to < 6 °C; pH < 2 with HCl

All samples were analyzed within the specified holding time criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not performed on a sample within this SDG.

6. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: 8260B/8260B-SIM	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Holding times/Preservation		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Field Duplicate RPD		X		X	
Internal standard		X		X	
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

%R Percent recovery

RPD Relative percent difference

%D Percent difference

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford LTP Off-Site

Report Number: 240-134796-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

RECEIPT

The samples were received on 8/12/2020 9:30 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.2° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples TRIP BLANK (240-134796-1) and MW-214S_081020 (240-134796-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/20/2020.

Sample MW-214S_081020 (240-134796-2)[5X] required dilution prior to analysis due to foaming at the time of purging during the original sample analysis.. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS SIM)

Sample MW-214S_081020 (240-134796-2) was analyzed for volatile organic compounds (GCMS SIM) in accordance with EPA SW-846 Method 8260B SIM. The samples were analyzed on 08/18/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: 30050315.0402.04 off site
Event Specific Scope of Work References: Sample COC
Laboratory: TestAmerica - North Canton
Laboratory submittal: 134796-1
Sample date: 2020-08-10
Report received by CADENA: 2020-08-25
Initial Data Verification completed by CADENA: 2020-08-25
Number of Samples:2
Sample Matrices:Water
Test Categories:GCMS VOC

Please see attached criteria report or sample result/qualified analytical result summary for qualifier flags assigned to sample data.

There were no significant QC anomalies or exceptions to report.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) Analysis

SDG # 240-134796-1

CADENA Verification Report: 2020-08-25

Analyses Performed By:

TestAmerica

Edison, New Jersey

Report #38151R

Review Level: Tier III

Project: 30050315.402.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 240-134796-1 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III) includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						VOC (Full Scan)	VOC (SIM)	MISC
240-134796-1	TRIP BLANK	240-134796-1	Water	8/10/2020		X		
	MW-214S_081020	240-134796-2	Water	8/10/2020		X	X	

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) SW-846 Method 8260B and 8260B SIM. Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260B/8260B-SIM	Water	14 days from collection to analysis	Cool to < 6 °C; pH < 2 with HCl

All samples were analyzed within the specified holding time criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (20%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria require the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the overall precision of the field sampling procedures and analytical method. A control limit of 30% for water matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of two times the RL is applied for water matrices.

A field duplicate was not performed on a sample within this SDG.

6. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

No compounds were detected in the samples within this SDG.

7. System Performance and Overall Assessment

The laboratory noted: Sample MW-214S_081020 (240-134796-2)[5X] required dilution prior to analysis due to foaming at the time of purging during the original sample analysis. The reporting limits have been adjusted accordingly.

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: 8260B/8260B-SIM	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)

Project Name: Ford LTP
Project #:
Workorder #: 2012710

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/30/2020 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 2012710

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on December 30, 2020. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - Soil Gas and Groundwater
Project number: 30050315.0301.01
Client project scopereference: Sample COC only was used to define project analytical requirements. Laboratory: Eurofins AirToxics - Folsom
Laboratorysubmittal: 2012710
Sample date: 2020-12-22
Report received byCADENA: 2021-01-07
Initial DataVerification completed: 2021-01-07
14 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #2012710

CADENA Verification Report: 2021-01-07

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #40013R
Review Level: Tier III
Project: 30050315.301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2012710 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

Results (in $\mu\text{g}/\text{m}^3$) for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
IAF-12400BELDEN-10_122220/ DUP-12400BELDEN-01_122220	Trichloroethene	0.53 J	0.98 U	AC

AC Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD		X		X	
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

%R Percent recovery

RPD Relative percent difference

%D Percent difference

Project Name: Ford LTP
Project #:
Workorder #: 2012711

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/30/2020 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 2012711

Twelve 1 Liter Summa Canister (100% Certified) samples were received on December 30, 2020. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - Soil Gas and Groundwater
Project number: 30050315.0301.01
Client project scopereference: Sample COC only was used to define project analytical requirements. Laboratory: Eurofins AirToxics - Folsom
Laboratorysubmittal: 2012711
Sample date: 2020-12-22
Report received byCADENA: 2021-01-06
Initial DataVerification completed: 2021-01-06
12 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #2012711

CADENA Verification Report: 2021-01-06

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #40014R
Review Level: Tier III
Project: 30050315.301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2012711 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

A field duplicate was not performed on a sample location within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD					X
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

%R Percent recovery

RPD Relative percent difference

%D Percent difference

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

R3.
 Date: ~~9/14/20~~ 9/14/20 Survey Performed by: X. Chan, A. Hartz, P. Labadie
 xc

conducted building walkthrough, building vacant
 NO ONE TO SURVEY.

1. OCCUPANT:

Rent: NA Own: NA

R4 12/18/220: X. Chan and A. Hartz conducted building survey with Tony Ford. NO changes since the building was vacated

Resident Name: VACANT

Address: 12900 Belden Court

Telephone: Home: NA Work: NA

How long have you lived at this location? NA

List current occupants/occupation below (attach additional pages if necessary):

Age (If under 18)	Sex (M/F)	Occupation
NA	NA	NA
xc		

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: NA First Name: Lilonia International Development, LLC

Address: NA

City and State: NA

County: NA

Home Phone: NA Office Phone: NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): N/A industrial

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: warehouse small office Year Constructed: ? UNKNOWN
portion

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/slab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.)

Ranch	2-Family	3-Family	Raised Ranch	N/A
Split Level	Colonial	Cape Cod	Contemporary	
Mobile Home	Duplex	Apartment House	Townhouses/Condos	
Modular	Log Home	Other: _____		

If multiple units, how many? NA

If the property is commercial:

Business type(s) vacant

Does it include residences (i.e., multi-use)? Yes No If yes, how many? NA

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one)

Full-time Occasionally Seldom Almost Never CURRENTLY VACANT

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	N/A
1st Floor	warehouse office
2nd Floor	N/A
3rd Floor	N/A
4th Floor	N/A

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

slab on-grade cinder block, interior wood frame / sheetrock

b. Basement Type: Full Crawlspace Slab ^{ON GRADE} Other: _____

c. Basement Floor: Concrete ^{SLAB} Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered N/A

If covered, what with? _____

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: _____

g. The ^{slab} Basement is: Wet Damp Dry

h. The ^{slab} Basement is: Finished Unfinished Partially Finished warehouse

i. Sump Present (Y / N) If yes, how many? _____

Where Discharged? N/A

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

floor drains
pipe penetrating plumbing
cracks in the slab ground

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No unknown

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive? NA

Is a sub-slab vapor/moisture barrier in place? Yes No unknown

Type of barrier: NA

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- Hot Air Circulation
- Space Heaters
- Electric Baseboard
- Other: rooftop units (exchangers)
- Heat Pump
- Steam Radiation
- Wood Stove
- Hot Water Baseboard
- Radiant Floor
- Outdoor Wood Boiler

The primary type of fuel used is:

- Natural Gas
- Electric
- Wood
- Fuel Oil
- Propane
- Coal
- Kerosene
- Solar

Domestic hot water tank fueled by: electric

Location of Boiler/Furnace: Basement Outdoors Main Floor Other roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present? Yes No

Is there a whole house fan? Yes No

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

AIR SUPPLY ON ROOF, HANGING UNITS IN WAREHOUSE,
DUCT WORK IN FRONT OFFICE, NOT VISIBLE.
PORTABLE AC UNIT IN WAREHOUSE OFFICE.

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage? Yes No

If yes, does it have a separate heating unit? Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car) Yes No

c) Has the building ever had a fire? Yes No

d) Is there a fuel burning or unvented gas space heater? Yes No

e) Is there a workshop or hobby/craft area? Yes No

If yes, where and what type? NA

f) Is there smoking in the building? Yes No

If yes, how frequently? NA - VACANT.

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
If yes, when and what type? NA
- h) Have cosmetic products been used recently? Yes No
If yes, when and what type? NA
- i) Has there been painting or staining in the last six months? Yes No
If yes, when and where? NA
- j) Is there new carpet, drapes, or other textiles? Yes No
If yes, when and where? NA
- k) Have air fresheners been used recently? Yes No
If yes, when and what type? NA
- l) Is there a kitchen exhaust fan? Yes No
If yes, where is it vented? NA
- m) Is there a clothes dryer? Yes No
If yes, is it vented outside? Yes No N/A
- n) Has there been a pesticide application? Yes No
If yes, when and what type? NA
- o) Are there odors in the building? Yes No
If yes, please describe: NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No N/A

If yes, what types of solvents are used? vacant

If yes, are their clothes washed at work?

Yes No N/A

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

No Unknown

vacant

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation? N/A

Active Passive

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

NA

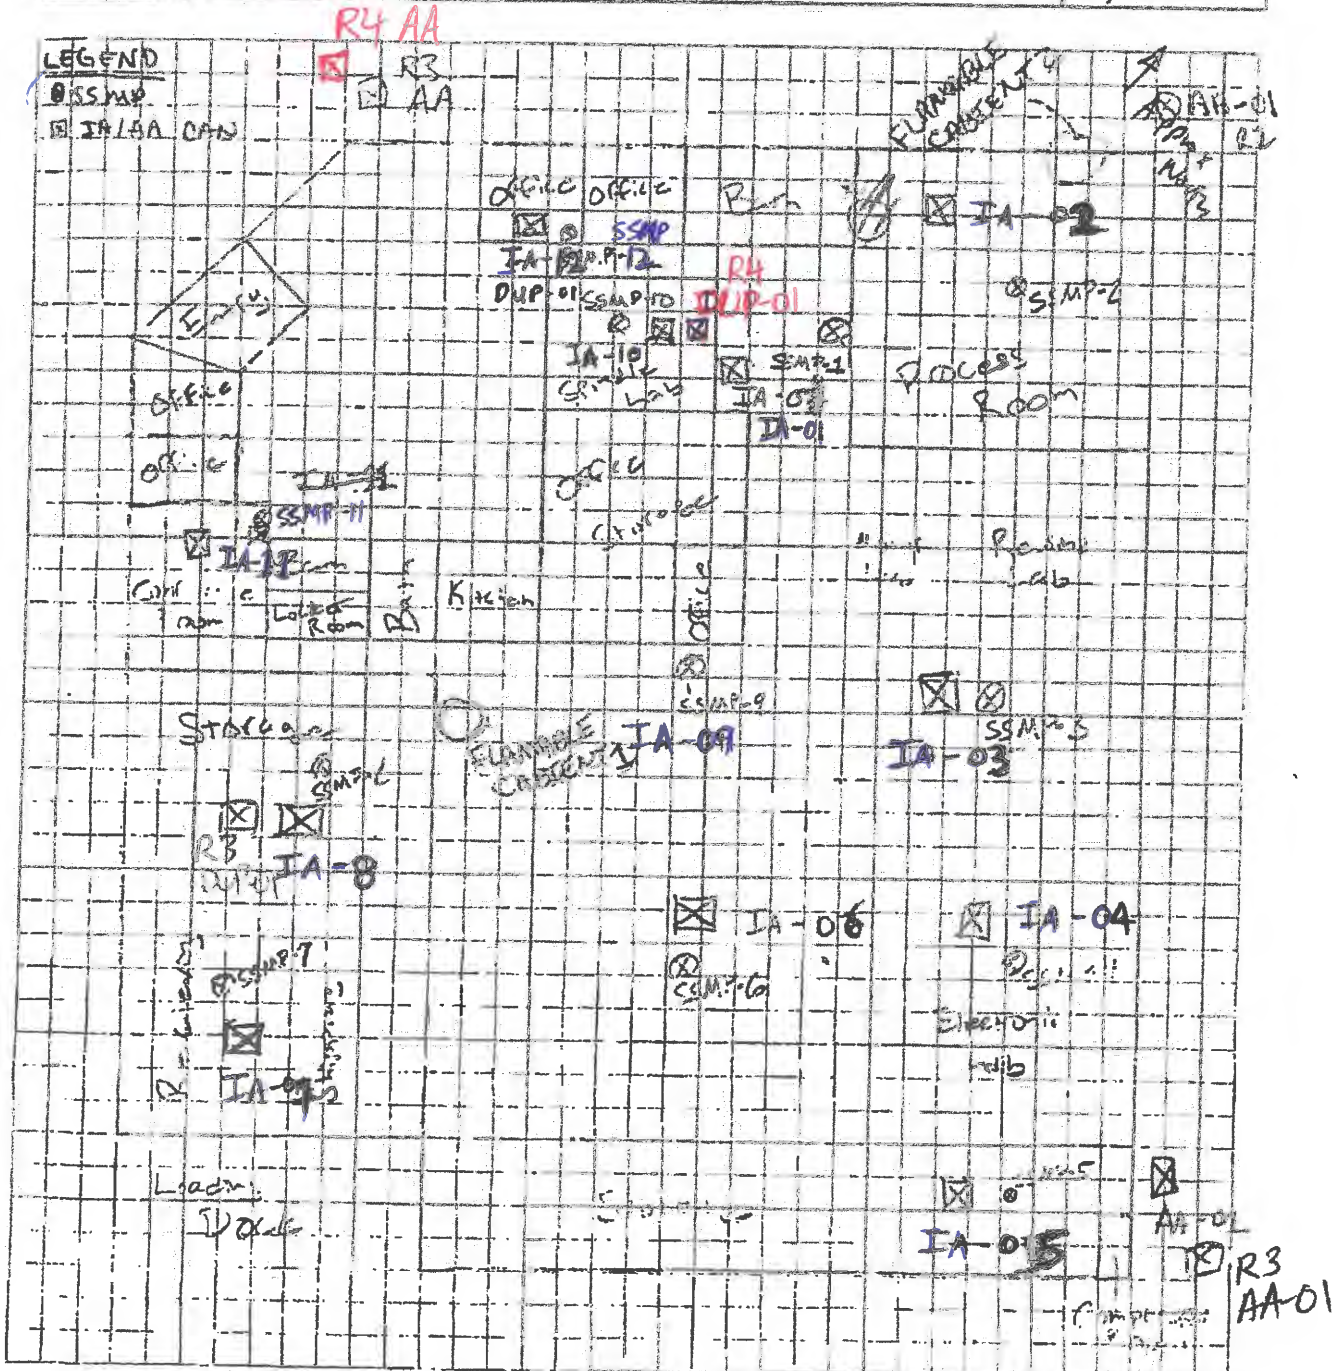

t) Is there an irrigation well, or any other well, present at the property:

Yes No

If yes, please describe placement, use, and history below.

NA

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1811416

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/20/2018 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1811416

Fourteen 6 Liter Summa Canister (100% Certified) samples were received on November 20, 2018. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. All The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Dilution was performed on samples IAF-12400Belden-01_111518, IAF-12400Belden-02_111518, IAF-12400Belden-03_111518, IAF-12400Belden-04_111518, IAF-12400Belden-05_111518, IAF-12400Belden-06_111518, IAF-12400Belden-09_111518, IAF-12400Belden-10_111518, IAF-12400Belden-11_111518, IAF-12400Belden-12_111518 and DUP-01 due to the presence of high level target species.

Dilution was performed on samples IAF-12400Belden-07_111518 and IAF-12400Belden-08_111518 due to the presence of high level non-target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1811416
Sample date: 2018-11-15
Report received by CADENA: 2018-11-29
Initial Data Verification completed by CADENA: 2018-11-29

14 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Project Name: Ford LTP
Project #:
Workorder #: 1811417

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/20/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1811417

Thirteen 1 Liter Summa Canister samples were received on November 20, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

The Chain of Custody (COC) was not relinquished properly. A signature, date and time were not provided by the field sampler.

The Chain of Custody (COC) information for sample SSMP_12400Belden-10_111518 did not match the information on the canister with regard to canister barcode. The sample labeled 40866 on the COC is labeled as 40865 on the canister. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Dilution was performed on sample SSMP-12400Belden-11_111518 due to the presence of high level target species.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates

as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1811417
Sample date: 2018-11-15
Report received by CADENA: 2018-11-29
Initial Data Verification completed by CADENA: 2018-11-29

13 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Site Location: Livonia, MI 12400 Belden Cr

Prepared By: ARCADIS A. Reynolds

Date	Time	Description of Activities
11/13/18	630	Purpose: Commercial Visit & Install SAMP Site
	-	Arrived Eric Corbett Area
	-	Weather: High wind, 25°C
	700	Arrived on-site West of GPR's
	-	PRG vehicle arriving in warehouse
	-	Step outside. Power station will not shut back on
	-	Amit Back to Miller to get another PID
	-	Amit back on site
	-	New PID > 5000 pps in ambient air in
	-	warehouse
	810	Fibered on-site
	-	Call M. Vachon re High PID readings
	-	Instructions to take indoor air survey
	-	Request George from other team to
	-	by 11:00
	930	E. Corbett Mob to other commercial
	-	site to locate air in
	1000	E. Corbett back to 12400 Belden
	-	Conduct MDER questionnaire
	-	Chemical Inventory - Ambient air in warehouse
	-	is > 17,000 pps (Motor Lab, Electronic Lab)
	-	Identify several chemicals containing products
	-	located Place in unopened, remove for storage
	-	off site

Utilities and Structures Checklist

THIS FORM MUST BE COMPLETED IN ENTIRETY PRIOR TO BEGINNING ANY INTRUSIVE WORK

Project: Ford LTP
 Project Number: MT 60454.003
 Form Completion Date: 11/13/2018 Form Expiration Date: 11/28/2018
(15 business days post form completion date)

Pre-Field Work

Required: One Call or "811" notified 48-72 hours in advance of work? # B83101452
 Ticket Expiration Date 11/28/2018 (Review State Requirements)

Utility companies notified during the One Call process See attached ticket
AT+T Electric City of Lincoln

List any other utilities requiring notification: None

Private Locator Contacted Yes No

Plan private utility clearance subcontractor assignments, areas, required clearance equipment, depth of clearance needed, types of utilities. When possible re-clear 811 markings to confirm utility locations.

Client provided utility maps or "as built" drawings showing utilities? Yes No

Field Work - This must be completed on site, by staff who have a minimum of one year of field experience in identifying utilities. Review Check list with PM or designee prior to beginning intrusive work.

List Soil Boring / Well IDs or Excavation Locations applicable to this clearance checklist:

SSM
Soil Boring SB-12400 Belden Ct - 111318

3 Reliable Lines of Evidence Required Prior to Starting any Subsurface Intrusive Work

- One Call/"811" (Reliable as a line of evidence when working in public right of way or easement)
 Utility Markings Present: Paint Pin flags/stakes Other None
- Client Provided Maps/Drawings **OR** Maps/Drawings requested but not provided
- Client Clearance Name(s)/Affiliation(s) _____
- Interview(s): Name(s)/Affiliation(s) _____

Did person(s) interviewed indicate depths of any utilities in the subsurface?
 Yes, depths provided: _____ Did not know or refused to answer
 Additional Comments: _____

- Site Inspection (Complete Page 2 & Photo Document Marked Utilities & Utility Structures)
- Public Records / Maps / Asbuilts
- Private Locator: (Name and Company) Erin Soro GPRS
- Ground Penetrating Radar (GPR)
- Radiofrequency (RFLoc)
- Electromagnetic (EM)
- Metal Detector

- Tips for Successful Utility Location:**
1. Don't forget to look up
 2. Be on site with Private Utility Locators
 3. Ask Private Locators to "confirm" other's markings
 4. Select alternate/backup locations during clearance process
 5. Mark out all known utilities. Leave nothing to question
 6. No hammering - no pickaxes - no digging bars - no shortcutting
 7. No excessive turning or downward force of hand augers/shovels
 8. Utilities may run in or directly under asphalt/concrete

Soft Dig Methods

- Termination Depth _____ ft. bgs
- Potholing / Vacuum Extraction
- Air-Knife Hydro-Knife
- Probing
- Hand Auguring

Other: _____
 Marine Locator: (Name and Company) _____

Utilities and Structures Checklist

During the site inspection look for the following: ("YES" requires additional investigation and the utility must be marked properly prior to beginning subsurface intrusive work):

Site Inspection	Utility Color Codes		Present	
a) Natural gas line present (evidence of a gas meter)?	Yellow	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
i) Feeder Lines to buildings or homes?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
b) Evidence of electric lines:	Red			
i) Conduits to ground from electric meter or along wall?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
iii) Conduits from power poles running into ground?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
ii) Light poles, electric devices with no overhead lines?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
iii) Overhead electric lines present? (See Section I)		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
c) Evidence of sewer drains:	Green			
i) Restrooms or kitchen on site?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
ii) Sewer cleanouts present?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
iii) Combined sewer /storm lines or multiple sewer lines?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
d) Evidence of water lines:	Blue			
i) Water meter on site or multiple water lines?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
ii) Fire hydrants in vicinity of work?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
iii) Irrigation systems? (Sprinkler heads, valve boxes, controls in building)		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
e) Evidence of storm drains:	Green			
i) Open curbside or slotted grate storm drains		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
ii) Gutter down spouts going into ground		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
f) Evidence of telecommunication lines:	Orange			
i) Fiber optic warning signs in areas?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
iv) Aboveground cable boxes or housings or wires in work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
g) Underground storage tanks:				
i) Tank pit present, tank vent present?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
ii) Product lines running to dispensers/buildings?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
h) Do utilities enter or exit existing structures/buildings?				
If Yes, confirm the utility markings outside of structure/building match up.		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
i) Proposed excavation marked in white?	White	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
j) Unclassed utilities / anomalies marked in pink?	Pink	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
k) Overhead Utilities/Communication Lines - Look Up:				
i) Overhead electrical conduit, pipe chases, cable trays, product lines?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
ii) Overhead fire sprinkler system?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
l) Overhead Power lines in or near the work area:				
i) < 50 kV within 10 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
ii) >50 - 200 kV within 15 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
iii) >200-350 kV within 20 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
iv) >350-500 kV within 25 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
v) >500-750 kV within 35 ft. or work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
vi) >750-1000 kV within 45 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
m) Other:				
i) Evidence of linear asphalt or concrete repair?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
ii) Evidence of linear ground subsidence or change in vegetation?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
iii) Unmarked manholes or valve covers in work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
iv) Warning signs ("Call Before you Dig", etc.) on or adjacent to site?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
v) Utility color markings not illustrated in this checklist?	i.e. Purple	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
n) Has the Utilities & Structures Checklist been reviewed by the PM or Designee		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	
PM or Designee Name: <u>Kris Hinson</u>				

Name and Signature of person completing the checklist:

Date: 11/12/2018

Do not perform mechanized intrusive work within 30 inches of a utility marking without receiving pre-approval by Corporate H&S.

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

Date: 1/13/2014 Survey Performed by: E. Carney

1. OCCUPANT:

Rent: Own:

Resident Name: Advanced Technology Services

Address: 12400 Bellan Court

Telephone: Home: NA Work: 737-523-8806

How long have you ^{rented} lived at this location? 16 years

List current occupants/occupation below (attach additional pages if necessary):

Age (If under 18)	Sex (M/F)	Occupation
NA		

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: International Development Company First Name: Daryl Royal

Address: 23179 Telegraph Rd

City and State: Southfield 48035

County: Unknown

Home Phone: NA Office Phone: 248-353-4800

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): NA (Industrial)

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School
 Describe Building: Primarily warehouse small office section Year Constructed: ?
 Number of floors at or above grade: 1
 Number of floors below grade: 0 (full basement/crawl space/slab on grade)
 Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.) NA

- | | | | |
|-------------|----------|-----------------|-------------------|
| Ranch | 2-Family | 3-Family | Raised Ranch |
| Split Level | Colonial | Cape Cod | Contemporary |
| Mobile Home | Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other: _____ | |

If multiple units, how many? _____

If the property is commercial:

Business type(s) Repair Industrial Equipment
 Does it include residences (i.e., multi-use)? Yes No If yes, how many? _____

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one) 1 shift 6am-4:30pm
 Full-time Occasionally Seldom Almost Never

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	NA
1 st Floor	Warehouse, Office
2 nd Floor	NA
3 rd Floor	NA
4 th Floor	NA

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

Slab-on-Grass, Cinder Block, Interior Wood Frame/Sheetrock

b. Basement Type: Full CrawlSpace Slab Other: _____

c. Basement Floor: Concrete Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered NA

If covered, what with? _____

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: _____

g. The ^{Slab}Basement is: Wet Damp Dry

h. The ^{Slab}Basement is: Finished Unfinished Partially Finished Warehouse

i. Sump Present (Y N) If yes, how many? _____

Where Discharged? _____

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

Floor Drains (ties to municipal sewer) - Do smell when they drain

Pipe Penetrations, Plumbing

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No Unknown

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive?

Is a sub-slab vapor/moisture barrier in place? Yes No Unknown

Type of barrier: _____

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- Hot Air Circulation
- Space Heaters
- Electric Baseboard
- Other: Roofing Units (Exhaust)
- Heat Pump
- Steam Radiation
- Wood Stove
- Hot Water Baseboard
- Radiant Floor
- Outdoor Wood Boiler

The primary type of fuel used is:

- Natural Gas
- Electric
- Wood
- Fuel Oil
- Propane
- Coal
- Kerosene
- Solar

Domestic hot water tank fueled by: Electric

Location of Boiler/Furnace: Basement Outdoors Main Floor Other Roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present?

Yes No

oversized ceiling fans present

Is there a whole house fan?

Yes No

- larger Exhaust fan in project room

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

Ar Supply on roof

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage?

Yes No

van present near loading dock

If yes, does it have a separate heating unit?

Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car)

Yes No

c) Has the building ever had a fire?

Yes No

d) Is there a fuel burning or unvented gas space heater?

Yes No

small individual space heaters (electric)

e) Is there a workshop or hobby/craft area?

Yes No

If yes, where and what type? _____

f) Is there smoking in the building?

Yes No

If yes, how frequently? _____

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
If yes, when and what type? Solvents, Vinegar, household chemicals
- h) Have cosmetic products been used recently? Yes No
If yes, when and what type? Face Powder
- i) Has there been painting or staining in the last six months? Yes No
If yes, when and where? Building - No, Painting in part of operation
- j) Is there new carpet, drapes, or other textiles? Yes No
If yes, when and where? Carpet replaced 3 years ago
- k) Have air fresheners been used recently? Yes No
If yes, when and what type? _____
- l) Is there a kitchen exhaust fan? Yes No
If yes, where is it vented? large exhaust fan in press room
- m) Is there a clothes dryer? Yes No
If yes, is it vented outside? Yes No
- n) Has there been a pesticide application? Yes No
If yes, when and what type? Service by Olen, last visit 3-4
years ago
- o) Are there odors in the building? Yes No
If yes, please describe: Sweet, waxy

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No

If yes, what types of solvents are used? Paints, water, detergents,
(see chemical inventory)

If yes, are their clothes washed at work?

Yes No

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

- No
- Unknown
- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service

- Uniforms sewers
uniforms
- Assume to be regular laundry

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation? N/A

Active Passive

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

Over-sized ceiling fans
Have exhaust fan in process RDR

t) Is there an irrigation well, or any other well, present at the property?

Yes No

If yes, please describe placement, use, and history below.

Product Inventory Form

i.e. gasoline cans/equipment, kerosene, paints/thinners/strippers, cleaning solvents, hobby supplies (glues), oven cleaner, carpet/upholstery cleaners, household cleaners, moth balls, polishes/waxes, insecticides, furniture/floor polish, hairspray, cologne/perfume, air fresheners, interior fuel tank, wood stove/fireplace, new furniture/upholstery, new carpet/flooring

Novi MI 48377

Project Name: Ford LTP
Project #: MI001454.0003
Workorder #: 1904294

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/12/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

Eurofins Air Toxics Inc.. certifies that the test results contained in this report meet all requirements of the NELAC standards

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1904294

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on April 12, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Samples IAF-12400BELDEN-01_040919, IAF-12400BELDEN-02_040919, IAF-12400BELDEN-03_040919, IAF-12400BELDEN-04_040919, IAF-12400BELDEN05_040919, IAF-12400BELDEN-06_040919, IAF-12400BELDEN-07_040919, IAF-12400BELDEN-08_040919, IAF-12400BELDEN-09_040919, IAF-12400BELDEN-10_040919, IAF-12400BELDEN-11_040919 and IAF-12400BELDEN-12_040919 were transferred from Low Level analysis to full scan TO-15 due to high levels of target compounds.

Dilution was performed on samples IAF-12400BELDEN-01_040919, IAF-12400BELDEN-02_040919, IAF-12400BELDEN-03_040919, IAF-12400BELDEN-04_040919, IAF-12400BELDEN05_040919, IAF-12400BELDEN-06_040919, IAF-12400BELDEN-07_040919, IAF-12400BELDEN-08_040919, IAF-12400BELDEN-09_040919, IAF-12400BELDEN-10_040919, IAF-12400BELDEN-11_040919 and IAF-12400BELDEN-12_040919 due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1904294
Sample date: 2019-04-09
Report received by CADENA: 2019-04-19
Initial Data Verification completed by CADENA: 2019-04-19

14 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1904294

CADENA Verification Report: 2019-04-19

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #32576R
Review Level: Tier III
Project: MI001454.0003.00001

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1904294 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of one times the RL is applied to the difference between the duplicate sample results.

Results (in $\mu\text{g}/\text{m}^3$) for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
AA-12400BELDEN-01_040919/ DUP-12400BELDEN01_040919	trans-1,2-Dichloroethene	4.6	96	NC
	Trichloroethene	3.2	55	

NC - Not Compliant

The compounds trans-1,2-Dichloroethene and Trichloroethene associated with sample locations AA-12400BELDEN-01_040919 and DUP-12400BELDEN01_040919 exhibited a field duplicate RPD greater than the control limit. The associated sample results from sample locations for the listed compound were qualified as estimated.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required

Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1904296

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/12/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1904296

Thirteen 1 Liter Summa Canister (100% Certified) samples were received on April 12, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Dilution was performed on sample SSMP-12400BELDEN-11_040919 due to the presence of high level target species.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1904296
Sample date: 2019-04-09
Report received by CADENA: 2019-04-19
Initial Data Verification completed by CADENA: 2019-04-19

13 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1904296

CADENA Verification Report: 2019-04-19

Eurofins Air Toxics
Folsom, California

Report #32577R
Review Level: Tier III
Project: MI001454.0003.00001

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1904296 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of one times the RL is applied to the difference between the duplicate sample results.

Results (in $\mu\text{g}/\text{m}^3$) for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SSMP-12400BELDEN-12_040919/ DUP-12400BELDEN-02_040919	Tetrachloroethene	12	12	AC
	trans-1,2-Dichloroethene	540	570	5.4%
	Trichloroethene	1100	1100	0.0%

Notes:

AC Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

Daily Log - Ford Off Site VI Investigation - VISIT 1

Project No.: MI001454.0003 Page 1 of 1

Site Location: 12400 Belden Livonia, MI

Prepared By: D. Craig

Date	Time	Description of Activities
4/8/19		Purpose: R2 Visit 1, Bldg Survey, Chemical Inventory + Samp inspection
		Arcadis: D. Craig, H. Ladd
		Weather: 57° Partly Cloudy
	0905	Arcadis on-site
	0910	Conducted Bldg Survey
	0915	Conducted Chemical inventory - Staff notified not to open windows/bay doors
		Note - TCE containing chemicals will be in use during sampling
		Chemicals cannot be removed as they are needed for normal
		business operation per Site staff. Background PID in
		general warehouse area - 7,500 ppb & 10,500 ppb in process
		room.
	0950	Arcadis off Site

Visit 1 Checklist

Background sources of VOCs have been removed/isolated? Yes No

Location of background sources of VOCs that have been removed/isolated: Flammable cabinets

Sump pit is present? Yes No

Daily Log - Ford Off Site VI Investigation - VISIT 2 & 3

Project No.: MI001454.0003 Page 1 of 1
 Site Location: 12400 Beidon Livonia, MI
 Prepared By: E Reimer

Date	Time	Description of Activities
4/9/14		Purpose: R2, V2 Deploy canisters, collect SSMP samples / R2, V3
		Arcadis: E Reimer, J. Lust
		Weather: 52°F
		SUMMA Canisters used: 13-10 min (include 1 dup) 14-hr (including 1 dup)
	0610	Arcadis on site
	0615	Deploy canisters, collect SSMP samples
	1009	Remind occupants to keep doors/windows to the outside closed
	1015	Arcadis off site
	1500	Arcadis on site - Visit 3: Jan retrieval / GEM+MH readings
	1500	Retrieve IA/AA canisters
		ER FR

Visit 2 & 3 Checklist

Background sources of VOCs have been removed/isolated? Yes No *as much as possible - stored in flammable cabinets*

Number of SSMP samples collected: 13 10-min (include 1 dup)

Number of indoor/ambient air samples collected: 14-hr (include 1 dup)

Occupancy hours (for commercial properties only): 6am - 4:30 pm

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

Date: 11/13/2016 Survey Performed by: E. Conroy

R2: 4-8-19

H. Ladd

1. OCCUPANT:

Rent: Own:

Resident Name: Advanced Technology Services R2-Todd Buhler

Address: 12400 Belton Court

Telephone: Home: NA Work: 734-523-8800

How long have you ^{lives} lived at this location? 16 years

List current occupants/occupation below (attach additional pages if necessary):

Age (if under 18)	Sex (M/F)	Occupation
NA		

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: International Development Company First Name: Darryl Rogers

Address: 23179 Telegraph Rd

City and State: Southfield 48033

County: Unknown

Home Phone: NA Office Phone: 248-353-4800

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): NA (Industrial)

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: Primarily Warehouse, small office SECTION Year Constructed: ?

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/slab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.) NA

- | | | | |
|-------------|----------|-----------------|-------------------|
| Ranch | 2-Family | 3-Family | Raised Ranch |
| Split Level | Colonial | Cape Cod | Contemporary |
| Mobile Home | Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other: _____ | |

If multiple units, how many? _____

If the property is commercial:

Business type(s) Repair Industrial Equipment

Does it include residences (i.e., multi-use)? Yes (No) If yes, how many? _____

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one) § 1 SLAB 6am - 4 30 pm

- (Full-time) Occasionally Seldom Almost Never

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	NA
1 st Floor	Warehouse, office
2 nd Floor	NA
3 rd Floor	NA
4 th Floor	NA

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

Slab-on-Grass, Cinder Block, Interior Wood Frame/Sheetrock

b. Basement Type: Full Crawlspace Slab Other: _____

c. Basement Floor: Concrete Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered NA

If covered, what with? _____

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: _____

g. The ^{Slab}Basement is: Wet Damp Dry

h. The ^{Slab}Basement is: Finished Unfinished Partially Finished Warehouse

i. Sump Present (Y/N) N If yes, how many? _____

Where Discharged? NA

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

Floor Drains (ties to municipal sewer) - Do smell when they dry out
Pipe Penetrations, Plumbing

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No Unknown

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive?

Is a sub-slab vapor/moisture barrier in place? Yes No Unknown

Type of barrier: _____

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- | | | |
|--|-----------------|---------------------|
| Hot Air Circulation | Heat Pump | Hot Water Baseboard |
| Space Heaters | Steam Radiation | Radiant Floor |
| Electric Baseboard | Wood Stove | Outdoor Wood Boiler |
| Other: <u>Roofing units (Exhausters)</u> | | |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Location of Boiler/Furnace: Basement Outdoors Main Floor Other Roof
Roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present?

Yes No

- oversized ceiling fans present

Is there a whole house fan?

Yes No

- large Exhaust fan in process room

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

~~air~~ Air Supply on roof

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage?

Yes No

Van present near loading dock

If yes, does it have a separate heating unit?

Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car)

Yes No

c) Has the building ever had a fire?

Yes No

d) Is there a fuel burning or unvented gas space heater?

Yes No

small individual space heaters (electrical)

e) Is there a workshop or hobby/craft area?

Yes No

If yes, where and what type? _____

f) Is there smoking in the building?

Yes No

If yes, how frequently? _____

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
 If yes, when and what type? Solvents, Vinegar, household cleaners *Cleaning company comes twice/week*
- h) Have cosmetic products been used recently? Yes No
 If yes, when and what type? Face Powder
- i) Has there been painting or staining in the last six months? Yes No
 If yes, when and where? Building - No, Painting in part of operation *(Spray painting booth)*
- j) Is there new carpet, drapes, or other textiles? Yes No
 If yes, when and where? Carpeters replaced 3 year ago
- k) Have air fresheners been used recently? Yes No
 If yes, when and what type? _____
- l) Is there a kitchen exhaust fan? Yes No
 If yes, where is it vented? large exhaust fan in press room
- m) Is there a clothes dryer? Yes No
 If yes, is it vented outside? Yes No
- n) Has there been a pesticide application? Yes No
 If yes, when and what type? Services by O.K.M., last visit 3-4 year ago - Ockin comes monthly to administer pesticides *Unknown what kind of pesticides*
- o) Are there odors in the building? Yes No
 If yes, please describe: Sweet, volatile

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No

If yes, what types of solvents are used? Parts washer, aerosols,
(See chemical inventory)

If yes, are their clothes washed at work?

Yes No

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

- No
- Unknown
- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service

- Uniform Services
Uniting
- Assumed to be regular
laundry

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation? N/A

Active Passive

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

Overides ceiling fans
Large exhaust fan to process radon

t) Is there an irrigation well, or any other well, present at the property:

Yes No

If yes, please describe placement, use, and history below.

Product Inventory Form

i.e. gasoline cans/equipment, kerosene, paints/thinners/strippers, cleaning solvents, hobby supplies (glues), oven cleaner, carpet/upholstery cleaners, household cleaners, moth balls, polishes/waxes, insecticides, furniture/floor polish, hairspray, cologne/perfume, air fresheners, interior fuel tank, wood stove/fireplace, new furniture/upholstery, new carpet/flooring

Date		Time		Temp (°F)		Relative Humidity (%)	Barometric Pressure (in. Hg)	Source of Weather Information	Purge Volume Calculation: The purge volume for each sample has been pre-calculated using the information below: For 60-ml soil vapor canisters the sample flow tubing length is ~34 inches and the interior tubing volume is 0.085. Three volumes of the sample flow is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius ² * height) where Volume = 60 ml, radius = 0.25" and height = 34". To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sample point. For other soil vapor sampling (0) milliliters should be used for the above general sample flow. Each additional foot of sub-grade tubing account for approximately 1.5 ml. To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

Meteorological Data							Purge Volume Calculations: The purge volume for each sample has been pre-calculated using the information below. For sub-slab soil vapor samples the sample train tubing length is ~54 inches and the interior tubing radius is 0.085". Three volumes of the sample train is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius ² * height) where Volume = 60 ml, radius = 0.085" and height = 54". To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sample point. For exterior soil vapor sampling 60 milliliters should be used for the above ground sample train. Each additional foot of sub-grade tubing account for approximately 13 ml. To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

Thank you for cooperating with the air sampling at your property on June 17 and September 15, 2020. During the initial sampling event on June 17th Arcadis staff encountered high air monitoring readings, this resulted in a change of conditions, therefore the team stopped work and did not collect sub-slab samples, thus the indoor air results were rejected. Arcadis returned on September 15th to collect a complete sample set. Attached is your data package.

Project Name: Ford LTP
Project #: 30042006.0301.02
Workorder #: 2006644

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 6/23/2020 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 2006644

Thirteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on June 23, 2020. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	$\leq 30\%$ RSD with 2 compounds allowed out to <math>< 40\%</math> RSD	$\leq 30\%$ RSD with 4 compounds allowed out to <math>< 40\%</math> RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Samples IAF-12400BELDEN-11_061720, IAF-12400BELDEN-12_061720, IAF-12400BELDEN-03_061720, IAF-12400BELDEN-05_061720, IAF-12400BELDEN-04_061720, IAF-12400BELDEN-07_061720, IAF-12400BELDEN-06_061720, IAF-12400BELDEN-08_061720, IAF-12400BELDEN-09_061720, IAF-12400BELDEN-01_061720, IAF-12400BELDEN-02_061720 and IAF-12400BELDEN-10_061720 were transferred from Low Level analysis to full scan TO-15 due to high levels of target compounds.

Dilution was performed on samples IAF-12400BELDEN-11_061720, IAF-12400BELDEN-12_061720, IAF-12400BELDEN-03_061720, IAF-12400BELDEN-05_061720, IAF-12400BELDEN-04_061720, IAF-12400BELDEN-07_061720, IAF-12400BELDEN-06_061720, IAF-12400BELDEN-08_061720, IAF-12400BELDEN-09_061720, IAF-12400BELDEN-01_061720, IAF-12400BELDEN-02_061720 and IAF-12400BELDEN-10_061720 due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: 30042006.0301.02 RESIDENTIAL
Client project scopereference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics -Folsom
Laboratory submittal: 2006644
Sample date: 2020-06-17
Report received by CADENA: 2020-06-30
Initial Data Verification completed: 2020-06-30
13 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #2006644

CADENA Verification Report: 2020-06-30

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #37738R
Review Level: Tier III
Project: 30050315.301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2006644 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						TO-15 (Full Scan)	TO-15 (SIM)	MISC

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

A field duplicate was not performed on a sample location within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD					X
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

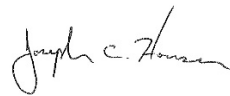

%R Percent recovery

RPD Relative percent difference

%D Percent difference

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #: 30050315
Workorder #: 2009561

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 9/21/2020 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 2009561

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on September 21, 2020. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
- UJ- Non-detected compound associated with low bias in the CCV
- N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

- a-File was requantified
- b-File was quantified by a second column and detector
- r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - Soil Gas and Groundwater
Project number: 30050315.0301.01
Client project scopereference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics -Folsom
Laboratory submittal: 2009561
Sample date: 2020-09-15
Report received by CADENA: 2020-09-28
Initial Data Verification completed: 2020-09-28
14 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #2009561

CADENA Verification Report: 2020-09-28

Project: 30050315.0301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2009561 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

Results (in $\mu\text{g}/\text{m}^3$) for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
IAF-12400BELDEN-08_091520/ DUP-12400BELDEN-01_091520	Tetrachloroethene	0.59 J	0.54 J	AC
	trans-1,2-Dichloroethene	1.8	1.8	AC
	Trichloroethene	2.0	1.8	AC

AC Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes

Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 2009565

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 9/21/2020 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 2009565

Twelve 1 Liter Summa Canister (100% Certified) samples were received on September 21, 2020. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project number: 30050315.0301.01
Client project scopereference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics -Folsom
Laboratory submittal: 2009565
Sample date: 2020-09-15
Report received by CADENA: 2020-09-28
Initial Data Verification completed: 2020-09-28
12 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #2009565

CADENA Verification Report: 2020-09-28

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #38575R
Review Level: Tier III
Project: 30050315.301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2009565 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

A field duplicate was not performed on a sample location within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD					X
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

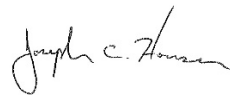

%R Percent recovery

RPD Relative percent difference

%D Percent difference

Daily Log - Ford Off Site VI Investigation - VISIT 1

Project No.: 30050315.0301.02

Site Location: 12400 BELDEN

Personnel Onsite: Xenia Chan, Christina Weaver

Date	Time	Description of Activities
6/15/2020		Purpose: Round 3 Visit 1: Chemical Inventory, Building Survey
		Weather: 62.06 degrees F and Mostly Clear
		Equipment: PID 6157
	9:56	Arrived on-site. Face mask, gloves, safety glasses worn, booties worn.
	10:04	Conducted building survey, requested to have windows and doors shut during visit 2 sampling.
	10:08	Conducted chemical inventory.
	10:25	Arcadis off-site.

Visit 1 Checklist	
Keeping windows & doors shut during IA/AA sampling was discussed?	<u>yes</u> Field Staff Signature: <u>Xenia Chan</u>
Have background sources of VOCs been removed/isolated?	<u>yes</u>
Is a sump pit present in the building?	<u>no</u>
Location of removed/isolated background VOCs: <u>Chemicals located inside flammable storage cabinet</u>	

Daily Log - Ford Off Site VI Investigation - VISIT 2

Project No.: 30050315.0301.02

Site Location: 12400 BELDEN

Personnel Onsite: Xenia Chan, Patrick Labadie

Date	Time	Description of Activities
6/17/2020		Purpose: Round 3 Visit 2: IA/AA deployment
		Weather: 57, sunny
		Equipment: PID 6157
	7:00	Arcadis on-site. Donned PPE (gloves, mask, safety glasses, booties).
	7:15	PID readings in warehouse sustained 12-13 ppm. Office PID readings 6 ppm. Stop work contact team to discuss work conditions.
	7:29	Deployed IA/AA canisters. Oven and washing machine turned on. Ventilation and fans are running.
	8:23	Arcadis off-site.
	9:28	Arcadis on-site. Asked operations manager of any process changes or chemical use changes during the week. Normal work operations, no processes change throughout the week.
	9:45	Arcadis off-site.

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

Date: ²⁰¹⁴ 1/13/13 ~~13~~ Survey Performed by: E. Conrad
R2: 4-8-19 H. Ladd

1. OCCUPANT:

Rent: Own:

Resident Name: Address Technology Services R1 Todd Buhler

Address: 12700 Belton Court

Telephone: Home: NA Work: 734-523-4806 R3, X.Chan 6/15/2020 C. Weaver

How long have you lived at this location? 16 years

List current occupants/occupation below (attach additional pages if necessary).

Age (if under 18)	Sex (M/F)	Occupation
NA		

No changes since the previous round. Operations manager stated they are no longer using TCE-containing chemicals.

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: International Developer Company First Name: Daryl Rogers

Address: 23179 Telegraph Rd

City and State: Southfield 48035

County: Unknown

Home Phone: NA Office Phone: 248-353-4800

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): NA (Industrial)

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: Finishing Warehouse small office section Year Constructed: ?

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/slab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.) NA

- | | | | |
|-------------|----------|-----------------|-------------------|
| Ranch | 2-Family | 3-Family | Raised Ranch |
| Split Level | Colonial | Cape Cod | Contemporary |
| Mobile Home | Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other: _____ | |

If multiple units, how many? _____

If the property is commercial:

Business type(s) Repair Industrial Equipment

Does it include residences (i.e., multi-use)? Yes No If yes, how many? _____

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one)

Full-time

Occasionally

Seldom

Almost Never

8 1 shift 6am-4 30 pm

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	NA
1 st Floor	Warehouse office
2 nd Floor	NA
3 rd Floor	NA
4 th Floor	NA

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

Slab-on-base, Under Block Interior Wood Framing/Sheetrock

b. Basement Type: Full Crawlspace **Slab** Other: _____

c. Basement Floor: **Concrete** Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered NA

If covered, what with? _____

e. Foundation Walls: **Poured** Block Stone Other: _____

f. Foundation Walls: **Unsealed** Sealed Sealed with: _____

g. The ^{Slab} Basement is: Wet Damp **Dry**

h. The ^{Slab} Basement is: Finished Unfinished Partially Finished Warehouse

i. Sump Present (Y/N) **(N)** If yes, how many? _____

Where Discharged? NA

Water in Sump? Yes No **Not Applicable**

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

Floor Drains (ties to municipal sewer) - Do smell when they dry out
Pipe Penetrating Plumbing

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No Unknown

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive?

Is a sub-slab vapor/moisture barrier in place? Yes No Unknown

Type of barrier: _____

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- | | | |
|---------------------------------------|-----------------|---------------------|
| Hot Air Circulation | Heat Pump | Hot Water Baseboard |
| Space Heaters | Steam Radiation | Radiant Floor |
| Electric Baseboard | Wood Stove | Outdoor Wood Boiler |
| Other: <u>Roofing Units (Exhaust)</u> | | |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Location of Boiler/Furnace: Basement Outdoors Main Floor Other Roof
Roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present?

Yes No

- oversized ceiling fans present

Is there a whole house fan?

Yes No

- large exhaust fan in process room

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

Air Supply on roof

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage?

Yes No

Van present near loading dock

If yes, does it have a separate heating unit?

Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car)

Yes No

c) Has the building ever had a fire?

Yes No

d) Is there a fuel burning or unvented gas space heater?

Yes No

small individual space heaters (electr.)

e) Is there a workshop or hobby/craft area?

Yes No

If yes, where and what type? _____

f) Is there smoking in the building?

Yes No

If yes, how frequently? _____

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
 If yes, when and what type? Solvents, Vines, household cleaners - cleaning company
comes twice/week
- h) Have cosmetic products been used recently? Yes No
 If yes, when and what type? Face Powder
- i) Has there been painting or staining in the last six months? Yes No
 If yes, when and where? Building - No, Painting in part of operation (Spray painting bath)
- j) Is there new carpet, drapes, or other textiles? Yes No
 If yes, when and where? Carpeters replaced 3 years ago
- k) Have air fresheners been used recently? Yes No
 If yes, when and what type? _____
- l) Is there a kitchen exhaust fan? Yes No
 If yes, where is it vented? large exhaust fan in press room
- m) Is there a clothes dryer? Yes No
 If yes, is it vented outside? Yes No
- n) Has there been a pesticide application? Yes No
 If yes, when and what type? Serviced by O.K.M. last year 3-4
year ago - called company to disinfect *Unknown what kind of pesticides*
- o) Are there odors in the building? Yes No
 If yes, please describe: Sweet, woodlike

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No

If yes, what types of solvents are used? Parts washer deposits
(See Chemical inventory)

If yes, are their clothes washed at work?

Yes No

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

- No
- Unknown
- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service

- University Servers
uniforms
- Assumers to be regular laundry

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation? N/A

Active Passive

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

Overizes ceiling fans
Use exhaust fan in process room

t) Is there an irrigation well, or any other well, present at the property:

Yes No

If yes, please describe placement, use, and history below.

Product Inventory Form

i.e. gasoline cans/equipment, kerosene, paints/thinners/strippers, cleaning solvents, hobby supplies (glues), oven cleaner, carpet/upholstery cleaners, household cleaners, moth balls, polishes/waxes, insecticides, furniture/floor polish, hairspray, cologne/perfume, air fresheners, interior fuel tank, wood stove/fireplace, new furniture/upholstery, new carpet/flooring

R3 updated chemical inventory. All chemicals were isolated inside flammables cabinets

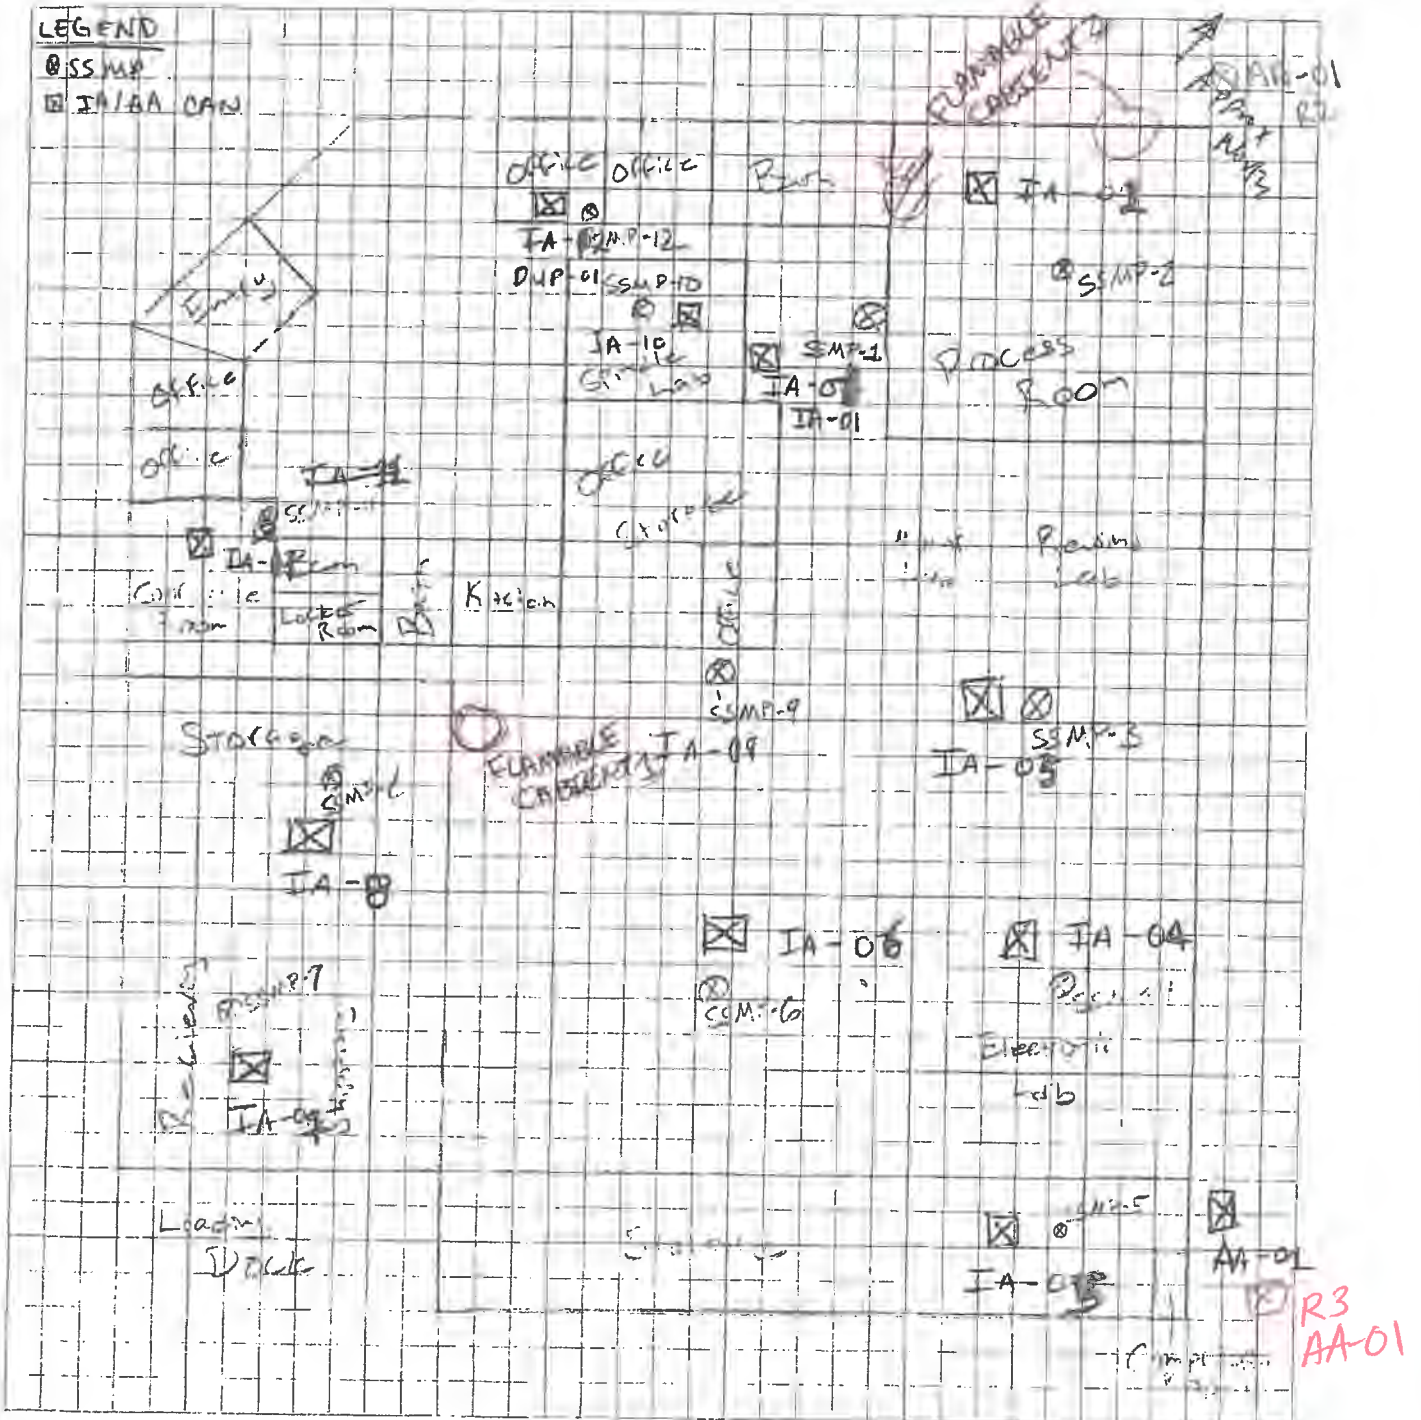

Flammable cabinet #1
PID 3400ppb

Flammable cabinet #2
PID: 5900ppb

Office PID 2330 ppb

They are no longer using "Powersolv" which contained TCE.

Daily Log - Ford Off Site VI Investigation - VISIT 1

Project No.: 30050315.301.01

Site Location: 12400 BELDEN

Personnel Onsite: Xenia Chan, Patrick Labadie, Allyson Hartz

Date	Time	Description of Activities
9/14/2020		Purpose: Round 3 Visit 1: building survey and chemical inventory
		Weather: 55.94 degrees F and Mostly Cloudy
		Equipment: PID 6153
	8:56	Arcadis on-site. Donned PPE (mask, gloves).
	9:00	Property is vacant. Owner has provided Arcadis with key to access building PID reading of 0 ppb in office and warehouse.
	9:11	Conducted chemical inventory and building walkthrough. No one available to complete survey
	9:17	Arcadis off-site, lock door

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

R3.
 Date: ~~9/14/20~~ 9/14/20 Survey Performed by: X. Chan, A. Hartz, P. Labadie
 xC conducted building walkthrough, building vacant
 NO ONE TO SURVEY.

1. OCCUPANT:

Rent: NA Own: NA
 Resident Name: VACANT
 Address: 12900 Belden Court
 Telephone: Home: NA Work: NA
 How long have you lived at this location? NA

List current occupants/occupation below (attach additional pages if necessary):

Age (If under 18)	Sex (M/F)	Occupation
NA	NA	NA
//		

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: NA First Name: Livonia International Development, LLC
 Address: NA
 City and State: NA
 County: NA
 Home Phone: NA Office Phone: NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): N/A industrial

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: WAREHOUSE small office portion Year Constructed: ? UNKNOWN

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/slab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.)

- | | | | | |
|-------------|----------|-----------------|-------------------|------------|
| Ranch | 2-Family | 3-Family | Raised Ranch | <u>N/A</u> |
| Split Level | Colonial | Cape Cod | Contemporary | |
| Mobile Home | Duplex | Apartment House | Townhouses/Condos | |
| Modular | Log Home | Other: _____ | | |

If multiple units, how many? NA

If the property is commercial:

Business type(s) vacant

Does it include residences (i.e., multi-use)? Yes No If yes, how many? NA

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one)

- | | | | | |
|-----------|--------------|--------|--------------|-------------------------|
| Full-time | Occasionally | Seldom | Almost Never | <u>CURRENTLY VACANT</u> |
|-----------|--------------|--------|--------------|-------------------------|

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	N/A
1st Floor	warehouse office
2nd Floor	N/A
3rd Floor	N/A
4th Floor	N/A

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

slab on-grade cinder block interior wood frame sheetrock

b. Basement Type: Full Crawl space Slab ^{ON GRADE} Other: _____

c. Basement Floor: Concrete ^{SLAB} Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered N/A

If covered, what with? _____

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: _____

g. The ^{slab} Basement is: Wet Damp Dry

h. The ^{slab} Basement is: Finished Unfinished Partially Finished warehouse

i. Sump Present (Y/ N) If yes, how many? _____

Where Discharged? N/A

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

floor drains
pipe penetrating plumbing
cracks in the slab ground

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No unknown

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive? NA

Is a sub-slab vapor/moisture barrier in place? Yes No unknown

Type of barrier: NA

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- Hot Air Circulation
- Space Heaters
- Electric Baseboard
- Other: rooftop units (exchangers)
- Heat Pump
- Steam Radiation
- Wood Stove
- Hot Water Baseboard
- Radiant Floor
- Outdoor Wood Boiler

The primary type of fuel used is:

- Natural Gas
- Electric
- Wood
- Fuel Oil
- Propane
- Coal
- Kerosene
- Solar

Domestic hot water tank fueled by: electric

Location of Boiler/Furnace: Basement Outdoors Main Floor Other roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present? Yes No

Is there a whole house fan? Yes No

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

AIR SUPPLY ON ROOF, HANGING UNITS IN WAREHOUSE,
DUCT WORK IN FRONT OFFICE NOT VISIBLE.
PORTABLE AC UNIT IN WAREHOUSE OFFICE.

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage? Yes No

If yes, does it have a separate heating unit? Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car) Yes ^{XC} No

c) Has the building ever had a fire? Yes ^{XC} No

d) Is there a fuel burning or unvented gas space heater? Yes ^{XC} No

e) Is there a workshop or hobby/craft area? Yes No

If yes, where and what type? NA

f) Is there smoking in the building? Yes No

If yes, how frequently? NA - VACANT.

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
 If yes, when and what type? NA
- h) Have cosmetic products been used recently? Yes No
 If yes, when and what type? NA
- i) Has there been painting or staining in the last six months? Yes No
 If yes, when and where? NA
- j) Is there new carpet, drapes, or other textiles? Yes No
 If yes, when and where? NA
- k) Have air fresheners been used recently? Yes No
 If yes, when and what type? NA
- l) Is there a kitchen exhaust fan? Yes No
 If yes, where is it vented? NA
- m) Is there a clothes dryer? Yes No
 If yes, is it vented outside? Yes No N/A
- n) Has there been a pesticide application? Yes No
 If yes, when and what type? NA
-
- o) Are there odors in the building? Yes No
 If yes, please describe: NA
-

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No N/A

If yes, what types of solvents are used? vacant

If yes, are their clothes washed at work?

Yes No N/A

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

- No Unknown vacant
- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation? N/A

Active Passive

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

NA

t) Is there an irrigation well, or any other well, present at the property:

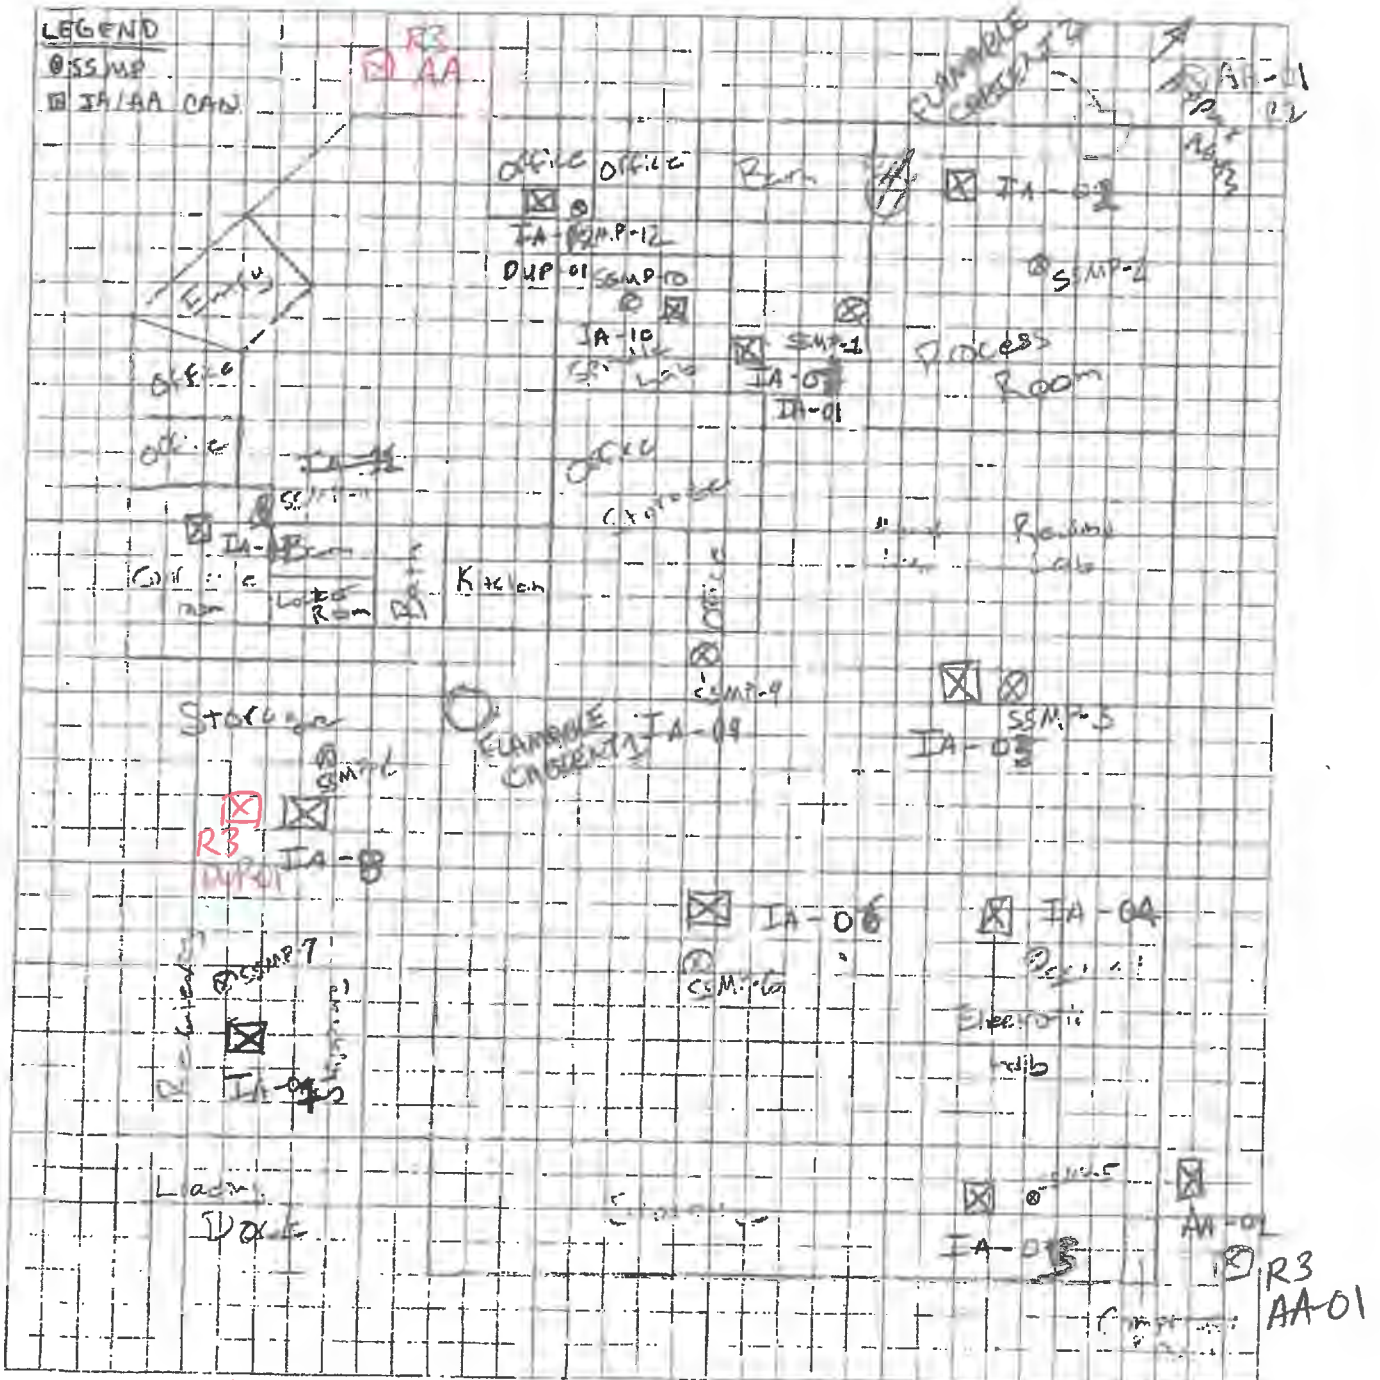

Yes No

If yes, please describe placement, use, and history below.

NA

Purge Volume Calculations:
The purge volume for each sample has been pre-calculated using the information below.
For sub-slab soil vapor samples the sample train tubing length is ~54 inches and the interior tubing radius is 0.085".
Three volumes of the sample train is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius² * height) where Volume = 60 ml, radius = 0.085" and height = 54".
To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sample point.
For exterior soil vapor sampling 60 milliliters should be used for the above ground sample train.
Each additional foot of sub-grade tubing account for approximately 13 ml.
To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 2012710

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/30/2020 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 2012710

Fourteen 6 Liter Summa Canister (100% Cert Ambient) samples were received on December 30, 2020. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - Soil Gas and Groundwater
Project number: 30050315.0301.01
Client project scopereference: Sample COC only was used to define project analytical requirements. Laboratory: Eurofins AirToxics - Folsom
Laboratorysubmittal: 2012710
Sample date: 2020-12-22
Report received byCADENA: 2021-01-07
Initial DataVerification completed: 2021-01-07
14 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Project: 30050315.301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2012710 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

Results (in $\mu\text{g}/\text{m}^3$) for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
IAF-12400BELDEN-10_122220/ DUP-12400BELDEN-01_122220	Trichloroethene	0.53 J	0.98 U	AC

AC Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD		X		X	
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X

Project Name: Ford LTP
Project #:
Workorder #: 2012711

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/30/2020 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 2012711

Twelve 1 Liter Summa Canister (100% Certified) samples were received on December 30, 2020. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - Soil Gas and Groundwater
Project number: 30050315.0301.01
Client project scopereference: Sample COC only was used to define project analytical requirements. Laboratory: Eurofins AirToxics - Folsom
Laboratorysubmittal: 2012711
Sample date: 2020-12-22
Report received byCADENA: 2021-01-06
Initial DataVerification completed: 2021-01-06
12 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #2012711

CADENA Verification Report: 2021-01-06

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #40014R
Review Level: Tier III
Project: 30050315.301.02

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 2012711 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of three times the RL is applied to the difference between the duplicate sample results.

A field duplicate was not performed on a sample location within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD					X
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

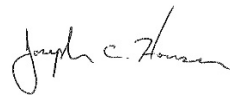

%R Percent recovery

RPD Relative percent difference

%D Percent difference

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

R3.
 Date: ~~9/14/20~~ 9/14/20 Survey Performed by: X. Chan, A. Hartz, P. Labadie
 xc

conducted building walkthrough, building vacant
 NO ONE TO SURVEY.

1. OCCUPANT:

Rent: NA Own: NA

R4 12/18/220: X. Chan and A. Hartz conducted building survey with Tony Ford. NO changes since the building was vacated

Resident Name: VACANT

Address: 12900 Belden Court

Telephone: Home: NA Work: NA

How long have you lived at this location? NA

List current occupants/occupation below (attach additional pages if necessary):

Age (If under 18)	Sex (M/F)	Occupation
NA	NA	NA
xc		

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: NA First Name: Lilonia International Development, LLC

Address: NA

City and State: NA

County: NA

Home Phone: NA Office Phone: NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): N/A industrial

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: warehouse small office Year Constructed: ? UNKNOWN
portion

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/slab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.)

Ranch	2-Family	3-Family	Raised Ranch	<u>N/A</u>
Split Level	Colonial	Cape Cod	Contemporary	
Mobile Home	Duplex	Apartment House	Townhouses/Condos	
Modular	Log Home	Other: _____		

If multiple units, how many? NA

If the property is commercial:

Business type(s) vacant

Does it include residences (i.e., multi-use)? Yes No If yes, how many? NA

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one)

Full-time Occasionally Seldom Almost Never CURRENTLY VACANT

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	N/A
1st Floor	warehouse office
2nd Floor	N/A
3rd Floor	N/A
4th Floor	N/A

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

slab on-grade cinder block, interior wood frame / sheetrock

b. Basement Type: Full Crawlspace Slab ^{ON GRADE} Other: _____

c. Basement Floor: Concrete ^{SLAB} Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered N/A

If covered, what with? _____

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: _____

g. The ^{slab} Basement is: Wet Damp Dry

h. The ^{slab} Basement is: Finished Unfinished Partially Finished warehouse

i. Sump Present (Y / N) If yes, how many? _____

Where Discharged? N/A

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

floor drains
pipe penetrating plumbing
cracks in the slab ground

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No unknown

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive? NA

Is a sub-slab vapor/moisture barrier in place? Yes No unknown

Type of barrier: NA

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- Hot Air Circulation
- Space Heaters
- Electric Baseboard
- Other: rooftop units (exchangers)
- Heat Pump
- Steam Radiation
- Wood Stove
- Hot Water Baseboard
- Radiant Floor
- Outdoor Wood Boiler

The primary type of fuel used is:

- Natural Gas
- Electric
- Wood
- Fuel Oil
- Propane
- Coal
- Kerosene
- Solar

Domestic hot water tank fueled by: electric

Location of Boiler/Furnace: Basement Outdoors Main Floor Other roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present? Yes No

Is there a whole house fan? Yes No

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

AIR SUPPLY ON ROOF, HANGING UNITS IN WAREHOUSE,
DUCT WORK IN FRONT OFFICE, NOT VISIBLE.
PORTABLE AC UNIT IN WAREHOUSE OFFICE.

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage? Yes No

If yes, does it have a separate heating unit? Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car) Yes No

c) Has the building ever had a fire? Yes No

d) Is there a fuel burning or unvented gas space heater? Yes No

e) Is there a workshop or hobby/craft area? Yes No

If yes, where and what type? NA

f) Is there smoking in the building? Yes No

If yes, how frequently? NA - VACANT.

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
If yes, when and what type? NA
- h) Have cosmetic products been used recently? Yes No
If yes, when and what type? NA
- i) Has there been painting or staining in the last six months? Yes No
If yes, when and where? NA
- j) Is there new carpet, drapes, or other textiles? Yes No
If yes, when and where? NA
- k) Have air fresheners been used recently? Yes No
If yes, when and what type? NA
- l) Is there a kitchen exhaust fan? Yes No
If yes, where is it vented? NA
- m) Is there a clothes dryer? Yes No
If yes, is it vented outside? Yes No N/A
- n) Has there been a pesticide application? Yes No
If yes, when and what type? NA
- o) Are there odors in the building? Yes No
If yes, please describe: NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No N/A

If yes, what types of solvents are used? vacant

If yes, are their clothes washed at work?

Yes No N/A

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

No Unknown

vacant

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation? N/A

Active Passive

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

NA

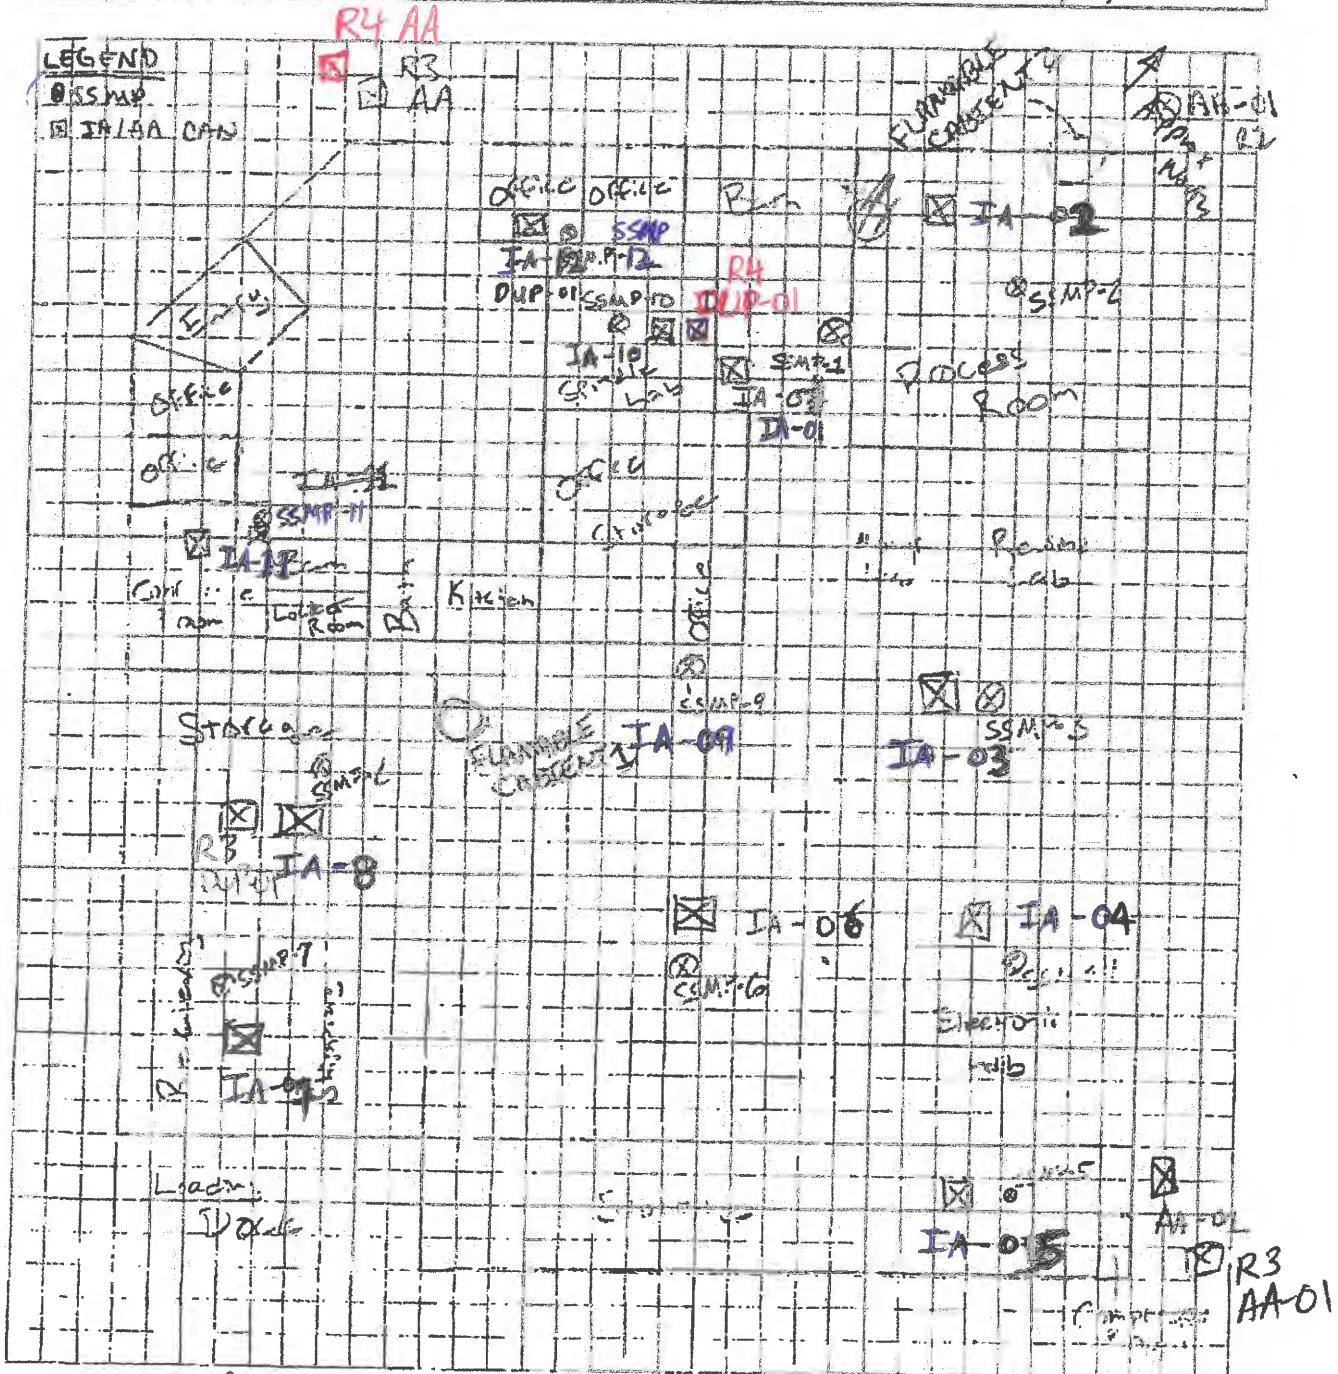

t) Is there an irrigation well, or any other well, present at the property:

Yes No

If yes, please describe placement, use, and history below.

NA

Meteorological Data							
Date	Time	Temp. (°F)		Relative Humidity (%)	Barometric Pressure (in. Hg)	Source of Weather Information	Purge Volume Calculations: The purge volume for each sample has been pre-calculated using the information below. For sub-slab soil vapor samples the sample train tubing length is ~54 inches and the interior tubing radius is 0.085". Three volumes of the sample train is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius ² * height) where Volume = 60 ml, radius = 0.85" and height = 54". To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sample point. For exterior soil vapor sampling 60 milliliters should be used for the above ground sample train. Each additional foot of sub-grade tubing account for approximately 13 ml. To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

MATERIAL SAFETY DATA SHEET

This MSDS complies with OSHA'S Hazard Communication Standard 29 CFR 1910.1200 and OSHA Form 174

IDENTITY AND MANUFACTURER'S INFORMATION	
NFPA Rating: Health-1; Flammability-2; Reactivity-0; Special-None HMS Rating: Health-1; Flammability-2; Reactivity-0; Personal Protection-B	
Manufacturer By: Amrep Automotive Products Group Address: 990 Industrial Park Drive Marietta, GA 30062	DOT Description: Consumer Commodity ORM-D Identity (trade name as used on label): <b style="text-align: center;">AUTO ZONE HD ENGINE DEGREASER
Date Prepared: 8/17/04 Prepared By: LMA	MSDS Number: 501700469 Revision: 1
Information Calls: (770) 422-2071 DOT EMERGENCY RESPONSE PHONE NUMBER: (800) 424-9300	NOTICE: JUDGEMENT BASED ON INDIRECT TEST DATA

SECTION 1 - MATERIAL IDENTIFICATION AND INFORMATION					
COMPONENTS-CHEMICAL NAMES AND COMMON NAMES (Hazardous Components 1% or greater; Carcinogens 0.1% or greater)	CAS Number	SARA III LIST	OSHA PEL (ppm)	ACGIH TLV (ppm)	Carcinogen Ref. Source ***
AROMATIC PETROLEUM DISTILLATE	64742-94-5	Yes*	N/E	N/E	d
PETROLEUM DISTILLATE	8008-20-6	No	5mg/M3 as mineral oil mist	100mg/M3 (skin)	d
ALIPHATIC PETROLEUM DISTILLATE (Mfr. Recommends PEL=100 ppm)	64742-47-8	No	N/E	N/E	d
2-BUTOXYETHANOL	111-76-2	Yes**	50 (skin)	25 (skin)	d
NAPHTHENIC OIL	64742-52-5	No	5mg/M3 as mineral oil mist	5mg/M3 as mineral oil mist	d
CARBON DIOXIDE (propellant)	124-38-9	No	5000	5000	d
*Contains ~9% Naphthalene CAS#91-20-3					
**Glycol Ethers Category					

SECTION 2 - PHYSICAL/CHEMICAL CHARACTERISTICS	
Boiling Point: 300-580°F (range for the concentrate)	Specific Gravity (H2O=1): 0.94 (for the concentrate only)
Vapor Pressure (PSIG @ 70°F) (Aerosols): 85-100	Vapor Pressure (Non-Aerosols) (mm Hg and Temperature): N/Ap
Vapor Density (Air = 1): N/E	Evaporation Rate (butyl Acetate = 1): N/E
Solubility in Water: Partial	Water Reactive: No
Appearance and Odor: Amber color; solvent odor.	VOC (Federal EPA Definition) = 4.85% (by weight)

SECTION 3 - FIRE AND EXPLOSION HAZARD DATA		
Flammability as per USA Flame Projection Test (aerosols): <b style="text-align: center;">NONFLAMMABLE	Auto Ignition Temperature: N/E	Flammability Limits in Air by % in Volume: % LEL: N/E % UEL: N/E
FLASH POINT AND METHOD USED (non-aerosols): N/Ap	EXTINGUISHER MEDIA: Foam, dry chemical; use water spray to cool exposed surfaces.	
SPECIAL FIRE FIGHTING PROCEDURES: Self-contained breathing apparatus.		
Unusual Fire & Explosion Hazards: Do not expose aerosols to temperatures above 120°F or the container may rupture.		

SECTION 4 - REACTIVITY HAZARD DATA	
STABILITY <input checked="" type="checkbox"/> STABLE <input type="checkbox"/> UNSTABLE	HAZARDOUS POLYMERIZATION <input type="checkbox"/> WILL <input checked="" type="checkbox"/> WILL NOT OCCUR
Incompatibility (materials to avoid): Acids and strong oxidizers.	Conditions to Avoid: Open flame, welding arcs, heat, sparks.
Hazardous Decomposition Products: Includes, but not limited to smoke, fumes, carbon monoxide, carbon dioxide, various hydrocarbons.	

SECTION 5 - HEALTH HAZARD DATA	
PRIMARY ROUTES OF ENTRY: <input checked="" type="checkbox"/> INHALATION <input type="checkbox"/> INGESTION <input checked="" type="checkbox"/> SKIN ABSORPTION <input checked="" type="checkbox"/> EYE <input type="checkbox"/> NOT HAZARDOUS	
ACUTE EFFECTS:	
Inhalation: May cause headache, dizziness, asphyxia, anesthetic effects (CNS depression), and possible unconsciousness.	
Eye Contact: Irritation.	Skin Contact: May irritate and/or cause dermatitis.
Ingestion: Nausea, vomiting, and diarrhea; possible chemical pneumonitis if aspirated into lungs.	
CHRONIC EFFECTS: Chronic overexposure to 2-Butoxyethanol may cause mild, reversible liver and kidney effects and blood abnormalities.	
Medical Conditions Generally Aggravated by Exposure: May aggravate existing eye, skin or upper respiratory conditions.	

EMERGENCY FIRST AID PROCEDURES	
Eye Contact: Flush with water for at least 15 minutes. If irritated, seek medical attention.	
Skin Contact: Remove contaminated clothing; launder before re-use. Wash skin with soap and water; if irritated, seek medical attention.	
Inhalation: Remove to fresh air; resuscitate if necessary. Administer oxygen if breathing is difficult. Seek medical attention.	
Ingestion: DO NOT INDUCE VOMITING. Seek immediate medical attention.	

SECTION 6 - CONTROL AND PROTECTIVE MEASURES	
Respiratory Protection (specify type): If vapor concentration exceeds TLV, use respirator approved by MSHA/NIOSH for organic vapor.	
Protective Gloves: Disposable nitrile gloves are suggested.	Eye Protection: Safety glasses recommended.
Ventilation Requirements: Adequate ventilation to keep vapor concentration below TLV.	
Other Protective Clothing & Equipment: Eyewash station.	
Hygienic Work Practices: Do not eat, drink or smoke in work areas. Wash hands after handling.	

SECTION 7 - PRECAUTIONS FOR SAFE HANDLING AND USE	
Steps To Be Taken If Material Is Spilled Or Released: Absorb spilled liquid with suitable medium. Do NOT flush to sewers or drains. Dispose according to local, state and federal regulations.	
Waste Disposal Methods: Aerosol cans, when vented to atmospheric pressure through normal use, pose no disposal hazard.	
Precautions To Be Taken In Handling & Storage: Do not puncture or incinerate containers. Do not store at temperatures above 120°F.	
Other Precautions &/or Special Hazards: KEEP OUT OF REACH OF CHILDREN. Read and follow all label directions. Remove ignition sources. Avoid breathing vapors. Avoid food contamination.	

We believe the statements, technical information and recommendations contained herein are reliable, but they are given without warranty or guarantee of any kind.

*** Chemical Listed as Carcinogen or Potential Carcinogen. [a] NTP [b] IARC Monograph [c] OSHA [d] Not Listed [e] Animal Data Only

Issue date 11-Apr-2018

Revision date 13-Aug-2020

Revision Number 4

1. IDENTIFICATION

Product identification

Product identifier	Lawson Brake Klean Non-Chlorinated Brake Parts Cleaner
Other means of identification	54474
Recommended use	Cleaner, Solvent
Restrictions on use	For industrial use only

Supplier

Corporate Headquarters:
Lawson Products, Inc.
8770 W. Bryn Mawr Ave., Suite 900
Chicago, IL 60631
(866) 837-9908

Canadian Distribution Center:
Lawson Canada
7315 Rapistan Court
Mississauga, ON L5N 5Z4
(800) 323-5922

24 Hour Emergency Phone Number (888) 426-4851 (Prosar)

Website <https://www.lawsonproducts.com>

2. HAZARD(S) IDENTIFICATION

Hazard Classification This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200), WHMIS 2015 and GHS Regulations.

Skin corrosion/irritation	Category 3
Serious eye damage/eye irritation	Category 2A
Carcinogenicity	Category 2
Aspiration toxicity	Category 1
Flammable aerosols	Category 1
Gases under pressure	Dissolved gas

Symbol

Signal word DANGER

Hazard statements
H222 - Extremely flammable aerosol
H280 - Contains gas under pressure; may explode if heated
H304 - May be fatal if swallowed and enters airways

H316 - Causes mild skin irritation
H319 - Causes serious eye irritation
H351 - Suspected of causing cancer

Precautionary statements

General

P101 - If medical advice is needed, have product container or label at hand
P102 - Keep out of reach of children
P103 - Read label before use.

Prevention

P201 - Obtain special instructions before use
P202 - Do not handle until all safety precautions have been read and understood
P210 - Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.
P211 - Do not spray on an open flame or other ignition source
P251 - Pressurized container: Do not pierce or burn, even after use
P264 - Wash hands thoroughly after handling
P280 - Wear protective gloves/protective clothing and eye/face protection

Response

General

P308 + P313 - IF exposed or concerned: Get medical advice/attention

Eyes

P305 + P351 + P338 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
P337 + P313 - If eye irritation persists: Get medical advice/attention

Skin

P332 + P313 - If skin irritation occurs: Get medical advice/attention

Ingestion

P301 + P310 - IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician
P331 - Do NOT induce vomiting

Storage

P405 - Store locked up
P410 - Protect from sunlight
P412 - Do not expose to temperatures exceeding 50 °C/122 °F
P403 - Store in a well-ventilated place

Disposal

P501 - Dispose of contents/container in accordance with local, regional, national, and international regulations as applicable

Hazard(s) Not Otherwise Classified (HNOC)

None known.

Physical Hazards Not Otherwise Classified (PHNOC)

None known.

Unknown acute toxicity

unknown toxicity: 55% inhalation, 55%dermal, 16% oral.

3. COMPOSITION/INFORMATION ON INGREDIENTS

Composition

Mixture.

Chemical name	CAS-No	Weight %
Acetone	67-64-1	35-45
Xylene (mix)	1330-20-7	35-40
Petroleum distillates, hydrotreated light	64742-47-8	5-15
Ethyl benzene	100-41-4	5-10
Carbon Dioxide	124-38-9	5-10

Volatile Organic Compounds (VOC's): 44%

4. FIRST-AID MEASURES

Necessary first-aid measures

Inhalation

Remove victim to fresh air and keep at rest in a position comfortable for breathing. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If necessary, call a poison center or physician. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Ingestion

Get medical attention immediately. Call a POISON CENTER or doctor. Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Aspiration hazard if swallowed. Can enter lungs and cause damage. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Skin contact

Flush contaminated skin with plenty of water. Remove contaminated clothing and footwear. Continue to rinse for at least 10 minutes. Get medical attention. Wash clothing before reuse. Clean shoes thoroughly before reuse.

Eye contact

Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.

Most important symptoms (acute)

Causes serious eye irritation. Harmful if inhaled. Can cause Central Nervous System depression. Causes skin irritation. May cause respiratory irritation. May cause drowsiness or dizziness. May be fatal if swallowed and enters airways. Irritating to mouth, throat and stomach.

Most important symptoms (over-exposure)

Adverse symptoms may include the following: eye pain, redness, and watering. Respiratory tract irritation. Coughing. Nausea or vomiting. Headache. Drowsiness/fatigue. Dizziness/vertigo. Unconsciousness. Skin irritation. Redness. Ingestion may cause nausea or vomiting.

Indication of any immediate medical attention and special treatment needed

Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled. No action shall be taken involving any personal risk or without suitable training. If it is suspected that vapors or fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. See section 11 for toxicological information.

5. FIRE-FIGHTING MEASURES

Suitable extinguishing media

Use an extinguishing agent suitable for the surrounding fire.

Unsuitable extinguishing media

None known.

Specific hazards

Extremely Flammable Aerosol. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. Gas may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back, causing fire or explosion. Bursting aerosol containers may be propelled from a fire at high

speed. Runoff to sewer may cause fire or explosion hazard. Hazardous Thermal Decomposition Products: Carbon dioxide. Carbon monoxide.

Special protective equipment for fire-fighters

Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if you can do it without risk. Use water spray to keep fire-exposed containers cool. Fire fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering the area. In the case of aerosols being ruptured, care should be taken due to the rapid escape of the pressurized contents and propellant. If a large number of containers are ruptured, treat as a bulk material spillage according to the instructions in the clean-up section. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in the hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment. If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information for 'non-emergency personnel'. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small Spill: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Large Spill: Stop leak if without risk. Move containers from spill area. Approach release from upwind. Prevent entry in sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Use spark-proof tools and explosion proof equipment. See section 1 for emergency contact information and section 13 for disposal information.

7. HANDLING AND STORAGE

Precautions for safe handling

Put on appropriate personal protective equipment (see section 8). Pressurized container: protect from sunlight and do not expose to temperatures exceeding 50°C. Do not pierce or burn, even after use. Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes, on skin, or on clothing. Do not breathe vapors or spray mist. Do not take internally. Avoid breathing dust/fume/gas/mist/vapors/spray. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical/ventilating/lighting/equipment. Use only non-sparking tools. Empty containers retain product residue and can be hazardous. Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking, and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities

Store in accordance with local regulations. Store away from direct sunlight in dry, cool and well-ventilated area, away from incompatible materials (see section 10) and food and drink. Protect from sunlight. Store locked up. Eliminate all sources of ignition. Use appropriate containment to avoid environmental contamination.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Control parameters

Chemical name	OSHA PEL (TWA)	ACGIH OEL (TWA)	NIOSH - TWA
Acetone	1000 ppm TWA 2400 mg/m ³ TWA	250 ppm TWA	250 ppm TWA 590 mg/m ³ TWA
Xylene (mix)	100 ppm TWA 435 mg/m ³ TWA	100 ppm TWA	-
Petroleum distillates, hydrotreated light	-	-	-
Ethyl benzene	100 ppm TWA 435 mg/m ³ TWA	20 ppm TWA	100 ppm TWA 435 mg/m ³ TWA
Carbon Dioxide	5000 ppm TWA 9000 mg/m ³ TWA	5000 ppm TWA	5000 ppm TWA 9000 mg/m ³ TWA

Appropriate engineering controls

Ensure adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment. Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures, such as personal protective equipment

Eye protection

Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles.

Skin and body protection

Chemical-resistant, impervious gloves (Nitrile or Viton) complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use the the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated. Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. When there is a risk of ignition from static electricity, wear anti-static protective clothing. For the greatest protection from static discharges, clothing should include anti-static overalls, boots and gloves. Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection

Use a properly fitted, air-purifying (Organic vapor) or supplied air respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical state	Liquid
Odor	Not available
Odor threshold	Not available
pH	Not available
Melting point/range °C	Not available
Melting point/range °F	Not available
Boiling point/range °C	Not available
Boiling point/range °F	Not available
Flash point °C	13
Flash point °F	55.4
Flash point method used	Pensky-Martens C.C.
Evaporation rate	5.6 (Butyl Acetate = 1)
Flammability (Solid, Gas)	Not available
Lower explosion limit	0.7 %
Upper explosion limit	12.8 %
Vapor pressure	13.5 kPa (101.325mm Hg) [at 20°C]
Vapor density	2(Air=1)
Relative density	0.83
Solubility	Not available
Partition coefficient (n-octanol/water)	Not available

Autoignition temperature °C	Not available
Autoignition temperature °F	Not available
Decomposition temperature °C	Not available
Decomposition temperature °F	Not available
Viscosity	Kinematic (room temperature): <0.07 cm ² /s (<7 cSt) Kinematic (40°C (104°F)): <0.07cm ² /s (<7 cSt)

10. STABILITY AND REACTIVITY

Reactivity	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	Stable.
Possibility of hazardous reactions	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	Avoid heat, sparks, and other sources of ignition.
Incompatible materials	No specific data.
Hazardous decomposition products	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	Dermal. Inhalation. Ingestion. Eyes.
Symptoms	Causes serious eye irritation. Harmful if inhaled. Can cause Central Nervous System depression. Vapors may cause drowsiness and dizziness. May cause respiratory irritation. Causes skin irritation. May be fatal if swallowed and enters airways. Irritating to mouth, throat and stomach. Adverse symptoms may include the following: eye pain, redness, and watering. Respiratory tract irritation. Coughing. Nausea. Vomiting. Headache. Drowsiness. Dizziness/vertigo. Unconsciousness. Fatigue. Skin irritation. Redness. Ingestion may cause nausea or vomiting.
Delayed and immediate effects as well as chronic effects from short and long-term exposure	May cause damage to organs through prolonged or repeated exposure. Suspected of causing cancer. Risk of cancer depends on duration and level of exposure.

Numerical measures of toxicity

Carbon Dioxide 124-38-9	124-38-9	-	no bioaccumulation

Mobility in soil Not available.

Other adverse effects No known significant effects or critical hazards.

13. DISPOSAL CONSIDERATIONS

Disposal information The generation of waste should be avoided or minimized whenever possible. Disposal of this product, solutions and any by-products should comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction.

Contaminated packaging Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its containers must be disposed of in a safe way. Empty containers or liners may retain some product residues. Do not puncture or incinerate.

14. TRANSPORTATION INFORMATION

Special Precautions

Multi-modal shipping descriptions are provided for informational purposes and do not consider container size. The presence of a shipping description for a particular mode of transport (sea, air, etc.), does not indicate that the product is packaged suitably for that mode of transport. All packaging must be reviewed for suitability prior to shipment, and compliance with the applicable regulations is the sole responsibility of the person offering the product for transport. People loading and unloading dangerous goods must be trained on all of the risks deriving from the substances and on all actions in case of emergency situations.

Section 2 - HAZARDS IDENTIFICATION

Classification in accordance with Schedule 1 of Canada's Hazardous Products Regulations (HPR) (SOR/2015-17) and paragraph (d) of 29 CFR 1910.1200 in the United States

None needed according to classification criteria

GHS Label Elements

Symbol(s)

None needed according to classification criteria

Signal Word

None needed according to classification criteria

Hazard Statement(s)

None needed according to classification criteria.

Safety Data Sheet

Material Name: ArmaKleen 4 in 1 Cleaner – Cleaning Solution

SDS ID: 820070

Precautionary Statement(s)

Prevention

None needed according to classification criteria.

Response

None needed according to classification criteria.

Storage

None needed according to classification criteria. Do not store below 40°F.

Disposal

Dispose of contents/container in accordance with local/regional/national/international regulations.

Other hazards

Repeated exposure may cause skin dryness or cracking. Contact with heated material may cause serious thermal burns.

Section 3 - COMPOSITION / INFORMATION ON INGREDIENTS

CAS	Component Name	Percent
7732-18-5	Water	93-99
124-07-2	Octanoic Acid	0.25-0.27
68429-46-3	Alcohols, C9-11, ethoxylated	0.19-0.21
68987-81-5	Alcohols, C6-10, ethoxylated and propoxylated	0.14-0.16
61791-26-2	Amines, tallow, alkyl, ethoxylated	0.14-0.16

Section 4 - FIRST AID MEASURES

Inhalation

IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Get medical attention, if needed.

Skin

IF ON SKIN: Remove contaminated clothing and shoes. Wash with plenty of soap and water. Get medical attention if needed.

Eyes

IF IN EYES: If irritation or redness from exposure to vapor or mist develops, move away from exposure and rinse cautiously with water for 5 minutes. Upon direct contact with liquid, immediately flush eyes with plenty of lukewarm water, holding eyelids apart, for 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention, if needed.

Ingestion

IF SWALLOWED: Call a POISON CENTER or doctor/physician. Never give anything by mouth to an unconscious person.

Most Important Symptoms/Effects

Acute

May cause skin irritation. May cause eye irritation. May cause respiratory irritation.

Delayed

Repeated exposure may cause skin dryness or cracking.

Indication of any immediate medical attention and special treatment needed

Treat symptomatically and supportively.

Safety Data Sheet

Material Name: ArmaKleen 4 in 1 Cleaner – Cleaning Solution

SDS ID: 820070

Section 5 - FIRE FIGHTING MEASURES

Extinguishing Media

Suitable Extinguishing Media

Use extinguishing agents appropriate for surrounding fire.

Unsuitable Extinguishing Media

Do not use high-pressure water streams. Avoid using a direct stream of water. Directly spraying water or foam onto hot burning product may cause frothing.

Special Hazards Arising from the Chemical

Negligible fire hazard. Avoid friction, static electricity and sparks.

Hazardous Combustion Products

Burning may produce oxides of carbon.

Advice for firefighters

Use water spray to keep fire-exposed containers cool.

Fire Fighting Measures

A positive-pressure, self-contained breathing apparatus (SCBA) and full-body protective equipment are required for fire emergencies.

Special Protective Equipment and Precautions for Firefighters

Wear full protective fire fighting gear including self contained breathing apparatus (SCBA) for protection against possible exposure.

Section 6 - ACCIDENTAL RELEASE MEASURES

Personal Precautions, Protective Equipment and Emergency Procedures

Wear personal protective clothing and equipment, see Section 8. Avoid release to the environment.

Methods and Materials for Containment and Cleaning Up

Spilled product is slippery. Do not touch or walk through spilled product. Stop leak if you can do it without risk. Wear protective equipment and provide engineering controls as specified in SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Ventilate area and avoid breathing vapor or mist. Contain spill away from surface water and sewers. Contain spill as a liquid for possible recovery, or sorb with compatible sorbent material and shovel with a clean, spark proof tool into a sealable container for disposal. Additionally, for large spills: Dike far ahead of liquid spill for collection and later disposal. There may be specific federal regulatory reporting requirements associated with spills, leaks, or releases of this product. Also see SECTION 15: REGULATORY INFORMATION.

Section 7 - HANDLING AND STORAGE

Precautions for Safe Handling

Keep away from heat, sparks and naked flames. Where flammable mixtures may be present, equipment safe for such locations should be used. Use clean tools and explosion-proof equipment. Use in a well ventilated area. Avoid contact with eyes Skin clothing shoes.

Conditions for Safe Storage, Including any Incompatibilities

Additional information: Storage. Keep container tightly closed when not in use and during transport. Store containers in a cool, dry place. Do not pressurize, cut, weld, braze, solder, drill, or grind containers. Keep containers away from flame, sparks, static electricity, or other sources of ignition. Empty product containers may retain product residue and can be dangerous. Do not store below 40°F.

Incompatible Materials

Oxidizers, reducing agents, acids.

Safety Data Sheet

Material Name: ArmaKleen 4 in 1 Cleaner – Cleaning Solution

SDS ID: 820070

Section 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

Component Exposure Limits

Canada and ACGIH have not developed exposure limits for any of this product's components.

ACGIH - Threshold Limit Values - Biological Exposure Indices (BEI)

There are no biological limit values for any of this product's components.

Engineering Controls

Provide general ventilation needed to maintain concentration of vapor or mist below applicable exposure limits. Where adequate general ventilation is unavailable, use process enclosures, local exhaust ventilation, or other engineering controls to control airborne levels below applicable exposure limits.

Individual Protection Measures, such as Personal Protective Equipment

Eye/face protection

Wear safety glasses. Additional protection like goggles, face shields, or respirators may be needed dependent upon anticipated use and concentrations of mists or vapors. Eye wash fountain and emergency showers are recommended. Contact lens use is not recommended.

Respiratory Protection

A respiratory protection program which meets USA's OSHA General Industry Standard 29 CFR 1910.134 or Canada's CSA Standard Z94.4-M1982 requirements must be followed whenever workplace conditions warrant a respirator's use. Consult a qualified Industrial Hygienist or Safety Professional for respirator selection guidance.

Glove Recommendations

Where skin contact is likely, wear neoprene, nitrile, or equivalent protective gloves; use of natural rubber or equivalent gloves is not recommended.

Protective Materials

Personal protective equipment should be selected based upon the conditions under which this material is used. A hazard assessment of the work area for PPE requirements should be conducted by a qualified professional pursuant to regulatory requirements. The following PPE should be considered the minimum required: Safety glasses, gloves, and lab coat or apron.

Section 9 - PHYSICAL AND CHEMICAL PROPERTIES

Other Information

No additional information is available.

Section 10 - STABILITY AND REACTIVITY

Reactivity

No reactivity hazard is expected.

Chemical Stability

Stable under normal temperatures and pressures.

Possibility of Hazardous Reactions

Will not polymerize.

Conditions to Avoid

Avoid heat, flames, sparks and other sources of ignition

Incompatible Materials

Oxidizers, acids, reducing agents.

Hazardous decomposition products

None under normal temperatures and pressures.

Thermal decomposition products

Oxides of carbon.

Section 11 - TOXICOLOGICAL INFORMATION

Information on Likely Routes of Exposure

Inhalation

May cause respiratory irritation.

Skin Contact

May cause skin irritation. Repeated exposure may cause skin dryness or cracking.

Eye Contact

May cause eye irritation.

Ingestion

Large amounts may cause gastrointestinal disturbances.

Safety Data Sheet

Material Name: ArmaKleen 4 in 1 Cleaner – Cleaning Solution

SDS ID: 820070

Acute and Chronic Toxicity

Component Analysis - LD50/LC50

The components of this material have been reviewed in various sources and no selected endpoints have been identified

Product Toxicity Data

Acute Toxicity Estimate

No data available.

Immediate Effects

May cause skin irritation. May cause eye irritation. May cause respiratory irritation.

Delayed Effects

Repeated exposure may cause skin dryness or cracking.

Irritation/Corrosivity Data

May cause skin irritation. May cause eye irritation. May cause respiratory irritation.

Respiratory Sensitization

No information available for the product.

Dermal Sensitization

No information available for the product.

Component Carcinogenicity

None of this product's components are listed by ACGIH, IARC, NTP, DFG or OSHA

Germ Cell Mutagenicity

No information available for the product.

Tumorigenic Data

No data available

Reproductive Toxicity

No information available for the product.

Specific Target Organ Toxicity - Single Exposure

No information on significant adverse effects.

Specific Target Organ Toxicity - Repeated Exposure

No information on significant adverse effects.

Aspiration hazard

No information available for the product.

Medical Conditions Aggravated by Exposure

Individuals with pre-existing respiratory tract (nose, throat, and lungs), eye, and/or skin disorders may have increased susceptibility to the effects of exposure.

Section 12 - ECOLOGICAL INFORMATION

Component Analysis - Aquatic Toxicity

No LOLI ecotoxicity data are available for this product's components

Persistence and Degradability

No information available for the product.

Bioaccumulative Potential

No information available for the product.

Mobility

No information available for the product.

Other Toxicity

No additional information is available.

Safety Data Sheet

Material Name: ArmaKleen 4 in 1 Cleaner – Cleaning Solution

SDS ID: 820070

Section 13 - DISPOSAL CONSIDERATIONS

Disposal Methods

The U.S; EPA has not published waste numbers for this product's components. Dispose in accordance with federal, state, provincial, and local regulations. Regulations may also apply to empty containers. The responsibility for proper waste disposal lies with the owner of the waste. Contact ArmaKleen regarding proper recycling or disposal.

Section 14 - TRANSPORT INFORMATION

US DOT Information: Not regulated for transport.
IATA Information: Not regulated for transport.
TDG Information: Not regulated for transport.

Section 15 - REGULATORY INFORMATION

Canada Regulations

CEPA - Priority Substances List

None of this product's components are on the list.

Ozone Depleting Substances

None of this product's components are on the list

Council of Ministers of the Environment - Soil Quality Guidelines

None of this product's components are on the list

Council of Ministers of the Environment - Water Quality Guidelines

None of this product's components are on the list

U.S. Federal Regulations

None of this products components are listed under SARA Sections 302/304 (40 CFR 355 Appendix A), SARA Section 313 (40 CFR 372.65), CERCLA (40 CFR 302.4), TSCA 12(b), or require an OSHA process safety plan.

SARA Section 311/312 (40 CFR 370 Subparts B and C)

Acute Health: No **Chronic Health:** No **Fire:** No **Pressure:** No **Reactivity:** No

Component Analysis - Inventory

No information is available.

Not listed under California Proposition 65.

Section 16 - OTHER INFORMATION

NFPA Ratings

Health: 1 Fire: 0 Reactivity: 0

Hazard Scale: 0 = Minimal; 1 = Slight; 2 = Moderate; 3 = Serious; 4 = Severe

Summary of Changes

Revision to comply with WHMIS 2015.

Key / Legend

ACGIH - American Conference of Governmental Industrial Hygienists; BOD - Biochemical Oxygen Demand; C - Celsius; CA - Canada; CA/MA/MN/NJ/PA - California/Massachusetts/Minnesota/New Jersey/Pennsylvania*; CAS - Chemical Abstracts Service; CFR - Code of Federal Regulations (US); CERCLA - Comprehensive Environmental Response, Compensation, and Liability Act; CLP - Classification, Labelling, and Packaging; CPR - Controlled Products Regulations; DOT - Department of Transportation; DSL - Domestic Substances List; EPA - Environmental Protection Agency; F - Fahrenheit; IDL - Ingredient Disclosure List; IDLH - Immediately Dangerous to Life and Health; IMDG - International Maritime Dangerous Goods; LEL - Lower Explosive Limit; LLV - Level Limit Value; LOLI - List Of LIsts™ - ChemADVISOR's Regulatory Database; MAK - Maximum Concentration Value in the Workplace; MEL - Maximum Exposure Limits; NDSL - Non-Domestic Substance List (Canada); NFPA - National Fire Protection Agency; NIOSH - National Institute for Occupational Safety and Health; NJTSR - New Jersey Trade

Safety Data Sheet

Material Name: ArmaKleen 4 in 1 Cleaner – Cleaning Solution

SDS ID: 820070

Secret Registry; NTP - National Toxicology Program; OSHA - Occupational Safety and Health Administration; PEL - Permissible Exposure Limit; RCRA - Resource Conservation and Recovery Act; SARA - Superfund Amendments and Reauthorization Act; STEL - Short-term Exposure Limit; TDG - Transportation of Dangerous Goods; TLV - Threshold Limit Value; TSCA - Toxic Substances Control Act; TWA - Time Weighted Average; UEL - Upper Explosive Limit; UN/NA - United Nations /North American; US - United States; WHMIS - Workplace Hazardous Materials Information System (Canada).

Other Information

This document has been prepared in accordance with the SDS requirements of the OSHA Hazard Communication Standard 29 CFR 1910.1200 and Canada's Hazardous Product Regulations (HPR)

Disclaimer:

User assumes all risks incident to the use of this product. To the best of our knowledge, the information contained herein is accurate. However, ArmaKleen assumes no liability whatsoever for the accuracy or completeness of the information contained herein. No representations or warranties, either expressed or implied, of merchantability, fitness for a particular purpose or of any other nature are made hereunder with respect to the information or the product to which the information refers. The data contained on this sheet apply to the product as supplied to the user.

Section 1: IDENTIFICATION**Product Name:** Simple Green® Industrial Cleaner & Degreaser**Additional Names:****Manufacturer's Part Number:** *Please refer to Section 16**Recommended Use:** Cleaner & Degreaser for water tolerant surfaces.**Restrictions on Use:** Do not use on non-rinsable surfaces.**Company:** Sunshine Makers, Inc.
15922 Pacific Coast Highway
Huntington Beach, CA 92649 USA**Telephone:** 800-228-0709 • 562-795-6000 *Mon – Fri, 8am – 5pm PST***Fax:** 562-592-3830**Email:** info@simplegreen.com**Emergency Phone:** Chem-Tel 24-Hour Emergency Service: 800-255-3924**Section 2: HAZARDS IDENTIFICATION****This product is not classified as hazardous under 2012 OSHA Hazard Communication Standards (29 CFR 1910.1200).**OSHA HCS 2012Label Elements**Signal Word:** None**Hazard Symbol(s)/Pictogram(s):** None required**Hazard Statements:** None**Precautionary Statements:** None**Hazards Not Otherwise Classified (HNOC):** None**Other Information:** None Known**Section 3: COMPOSITION/INFORMATION ON INGREDIENTS**

<u>Ingredient</u>	<u>CAS Number</u>	<u>Percent Range</u>
Water	7732-18-5	> 84.998%*
Ethoxylated Alcohol	68439-46-3	< 5%*
Sodium Citrate	68-04-2	< 5%*
Tetrasodium <i>N,N</i> -bis(carboxymethyl)-L-glutamate	51981-21-6	< 1%*

Fragrance	Proprietary Mixture	< 1%*
Colorant	Proprietary Mixture	< 1%*

*specific percentages of composition are being withheld as a trade secret

Section 4: FIRST-AID MEASURES**Inhalation:** Not expected to cause respiratory irritation. If adverse effect occurs, move to fresh air.**Skin Contact:** Not expected to cause skin irritation. If adverse effect occurs, rinse skin with water.**Eye Contact:** Not expected to cause eye irritation. If adverse effect occurs, flush eyes with water.**Ingestion:** May cause upset stomach. Drink plenty of water to dilute. See section 11.**Most Important Symptoms/Effects, Acute and Delayed:** None known.**Indication of Immediate Medical Attention and Special Treatment Needed, if necessary:** Treat symptomatically

Section 5: FIRE-FIGHTING MEASURES

Suitable & Unsuitable Extinguishing Media: Use Dry chemical, CO₂, water spray or “alcohol” foam. Avoid high volume jet water.
Specific Hazards Arising from Chemical: In event of fire, fire created carbon oxides may be formed.
Special Protective Actions for Fire-Fighters: Wear positive pressure self-contained breathing apparatus; Wear full protective clothing.

This product is non-flammable. See Section 9 for Physical Properties.

Section 6: ACCIDENTAL RELEASE MEASURES

Personal Precautions, Protective Equipment and Emergency Procedures: *For non-emergency and emergency personnel:* See section 8 – personal protection. Avoid eye contact. Safety goggles suggested.

Environmental Precautions: Do not allow into open waterways and ground water systems.

Methods and Materials for Containment and Clean Up: Dike or soak up with inert absorbent material. See section 13 for disposal considerations.

Section 7: HANDLING AND STORAGE

Precautions for Safe Handling: Ensure adequate ventilation. Keep out of reach of children. Keep away from heat, sparks, open flame and direct sunlight. Do not pierce any part of the container. Do not mix or contaminate with any other chemical. Do not eat, drink or smoke while using this product.

Conditions for Safe Storage including Incompatibilities: Keep container tightly closed. Keep in cool dry area. Avoid prolonged exposure to sunlight. Do not store at temperatures above 109°F (42.7°C). If separation occurs, mix the product for reconstitution.

Section 8: EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Limit Values: No components listed with TWA or STEL values under OSHA or ACGIH.

Appropriate Engineering Controls: Showers, eyewash stations, ventilation systems

Individual Protection Measures / Personal Protective Equipment (PPE)

Eye Contact: Use protective glasses or safety goggles if splashing or spray-back is likely.
Respiratory: Use in well ventilated areas or local exhaust ventilations when cleaning small spaces.
Skin Contact: Use protective gloves (any material) when used for prolonged periods or dermally sensitive.
General Hygiene Considerations: Wash thoroughly after handling and before eating or drinking.

Section 9: PHYSICAL AND CHEMICAL PROPERTIES

Appearance:	Green Liquid	Partition Coefficient: n-octanol/water:	Not determined
Odor:	Added sassafras odor	Autoignition Temperature:	Non-flammable
Odor Threshold:	Not determined	Decomposition Temperature:	109°F
pH ASTM D-1293:	8.5 – 9.5	Viscosity:	Like water
Freezing Point ASTM D-1177:	0-3.33°C (32-38°F)	Specific Gravity ASTM D-891:	1.01 – 1.03
Boiling Point & Range ASTM D-1120:	101°C (213.8°F)	VOCs:	<i>**Water & fragrance exemption in calculation</i>
Flash Point ASTM D-93:	> 212°F	SCAQMD 304-91 / EPA 24:	0 g/L 0 lb/gal 0%
Evaporation Rate ASTM D-1901:	½ Butyl Acetate @ 25°C	CARB Method 310**:	2.5 g/L 0.021 lb/gal 0.25%
Flammability (solid, gas):	Not applicable	SCAQMD Method 313:	Not tested
Upper/Lower Flammability or Explosive Limits:	Not applicable	VOC Composite Partial Pressure:	Not determined
Vapor Pressure ASTM D-323:	0.60 PSI @77°F, 2.05 PSI @100°F	Relative Density ASTM D-4017:	8.34 – 8.42 lb/gal
Vapor Density:	Not determined	Solubility:	100% in water

Section 10: STABILITY AND REACTIVITY

Reactivity:	Non-reactive.
Chemical Stability:	Stable under normal conditions 70°F (21°C) and 14.7 psig (760 mmHg).
Possibility of Hazardous Reactions:	None known.
Conditions to Avoid:	Excessive heat or cold.
Incompatible Materials:	Do not mix with oxidizers, acids, bathroom cleaners, or disinfecting agents.
Hazardous Decomposition Products:	Normal products of combustion - CO, CO ₂ .

Section 11: TOXICOLOGICAL INFORMATION

Likely Routes of Exposure:	Inhalation -	Overexposure may cause headache.
	Skin Contact -	Not expected to cause irritation, repeated contact may cause dry skin.
	Eye Contact -	Not expected to cause irritation.
	Ingestion -	May cause upset stomach.

Symptoms related to the physical, chemical and toxicological characteristics: no symptoms expected under typical use conditions.

Delayed and immediate effects and or chronic effects from short term exposure: no symptoms expected under typical use conditions.

Delayed and immediate effects and or chronic effects from long term exposure: headache, dry skin, or skin irritation may occur.

Interactive effects: Not known.

Numerical Measures of Toxicity

Acute Toxicity:	Oral LD ₅₀ (rat)	> 5 g/kg body weight
	Dermal LD ₅₀ (rabbit)	> 5 g/kg body weight

Calculated via OSHA HCS 2012 / Globally Harmonized System of Classification and Labelling of Chemicals

Skin Corrosion/Irritation:	Non-irritant per Dermal Irritation® assay modeling. No animal testing performed.
Eye Damage/Irritation:	Minimal irritant per Ocular Irritation® assay modeling. No animal testing performed.
Germ Cell Mutagenicity:	Mixture does not classify under this category.
Carcinogenicity:	No ingredients trigger or classify under this category under NTP, IARC or OSHA.
Reproductive Toxicity:	Mixture does not classify under this category.
STOT-Single Exposure:	Mixture does not classify under this category.
STOT-Repeated Exposure:	Mixture does not classify under this category.
Aspiration Hazard:	Mixture does not classify under this category.

Section 12: ECOLOGICAL INFORMATION

Ecotoxicity:	Volume of ingredients used does not trigger toxicity classifications under the Globally Harmonized System of Classification and Labelling of Chemicals.
Aquatic:	Aquatic Toxicity - Low, based on OECD 201, 202, 203 + Microtox: EC ₅₀ & IC ₅₀ ≥100 mg/L. Volume of ingredients used does not trigger toxicity classifications under the Globally Harmonized System of Classification and Labelling of Chemicals.
Terrestrial:	Not tested on finished formulation.
Persistence and Degradability:	Readily Biodegradable per OCED 301D, Closed Bottle Test
Bioaccumulative Potential:	No data available.
Mobility in Soil:	No data available.
Other Adverse Effects:	No data available.

Section 13: DISPOSAL CONSIDERATIONS

Unused or Used Liquid: May be considered hazardous in your area depending on usage and tonnage of disposal – check with local, regional, and or national regulations for appropriate methods of disposal.

Empty Containers: May be offered for recycling.

Never dispose of used degreasing rinsates into lakes, streams, and open bodies of water or storm drains.

Section 14: TRANSPORT INFORMATION

U.N. Number: Not applicable **U.N. Proper Shipping Name:** Cleaning Compound, Liquid NOI
Transport Hazard Class(es): Not applicable
Packing Group: Not applicable
Environmental Hazards: Marine Pollutant - NO
Transport in Bulk (according to Annex II of MARPOL 73/78 and IBC Code): Unknown.
Special precautions which user needs to be aware of/comply with, in connection with transport or conveyance either within or outside their premises: None known.
U.S. (DOT) / Canadian TDG: Not Regulated for shipping. **ICAO/ IATA:** Not classified as Hazardous
IMO / IDMG: Not classified as Hazardous **ADR/RID:** Not classified as Hazardous

Section 15: REGULATORY INFORMATION

All components are listed on: TSCA and DSL Inventory.
SARA Title III: Sections 311/312 Hazard Categories – Not applicable.
 Sections 313 Superfunds Amendments and Reauthorizations Act of 1986 – Not applicable.
 Sections 302 – Not applicable.
Clean Air Act (CAA): Not applicable
Clean Water Act (CWA): Not applicable
State Right To Know Lists: No ingredients listed
California Proposition 65: No ingredients listed

Texas ESL:

Ethoxylated Alcohol	68439-46-3	60 µg/m³ long term	600 µg/m³ short term
Sodium Citrate	68-04-2	5 µg/m³ long term	50 µg/m³ short term
Sodium Carbonate	497-19-8	5 µg/m³ long term	50 µg/m³ short term
Citric Acid	77-92-9	10 µg/m³ long term	100 µg/m³ short term

DISCLAIMER: The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

SAFETY DATA SHEET

Techspray Blue Shower® G3®

Section 1. Identification

GHS product identifier : Techspray Blue Shower® G3®
Product code : 1630-16S
Other means of identification : Not available. Aerosol.
Product type : Aerosol.

Relevant identified uses of the substance or mixture and uses advised against

Not applicable.

Supplier's details : Techspray
8125 Cobb Center Drive
Kennesaw, GA 30152
Tel: 678-819-1408
Toll free: 1-800-858-4043
Fax: 1 806-372-8750

Emergency telephone number (with hours of operation) : Chemtrec - 1-800-424-9300
CANUTEC (Canadian Transportation): (613) 996-6666
Emergency phone: (800) 858-4043
24/7

Section 2. Hazards identification

OSHA/HCS status : This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

Classification of the substance or mixture : SKIN CORROSION/IRRITATION - Category 2
SERIOUS EYE DAMAGE/ EYE IRRITATION - Category 2A
GASES UNDER PRESSURE Compressed gas
Percentage of the mixture consisting of ingredient(s) of unknown toxicity: 2%

GHS label elements

Hazard pictograms :

Signal word : Warning

Hazard statements : Causes serious eye irritation.
Causes skin irritation.
Contains gas under pressure; may explode if heated.

Precautionary statements

Prevention : Wear protective gloves. Wear eye or face protection. Wash hands thoroughly after handling.

Response : IF ON SKIN: Wash with plenty of soap and water. Take off contaminated clothing and wash it before reuse. If skin irritation occurs: Get medical attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention.

Storage : Protect from sunlight. Store in well-ventilated place.

Disposal : Not applicable.

Hazards not otherwise classified : None known.

Section 3. Composition/information on ingredients

Substance/mixture : Mixture
Other means of identification : Not available. Aerosol.

Ingredient name	%	CAS number
trans-dichloroethylene	≥25 - ≤50	156-60-5
ethanol	≤5	64-17-5

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

- Eye contact** : Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
- Inhalation** : Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention if adverse health effects persist or are severe. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband. In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours.
- Skin contact** : Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Continue to rinse for at least 10 minutes. Get medical attention. Wash clothing before reuse. Clean shoes thoroughly before reuse.
- Ingestion** : Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention if adverse health effects persist or are severe. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Most important symptoms/effects, acute and delayed

Potential acute health effects

- Eye contact** : Causes serious eye irritation.
- Inhalation** : No known significant effects or critical hazards.
- Skin contact** : Causes skin irritation.
- Ingestion** : No known significant effects or critical hazards.

Over-exposure signs/symptoms

- Eye contact** : Adverse symptoms may include the following:
 pain or irritation
 watering
 redness
- Inhalation** : Adverse symptoms may include the following:
 respiratory tract irritation
 coughing

Section 4. First aid measures

- Skin contact** : Adverse symptoms may include the following:
irritation
redness
- Ingestion** : Adverse symptoms may include the following:
Irritating to mouth, throat and stomach.

Indication of immediate medical attention and special treatment needed, if necessary

- Notes to physician** : In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours.
- Specific treatments** : No specific treatment.
- Protection of first-aiders** : No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media

- Suitable extinguishing media** : Use an extinguishing agent suitable for the surrounding fire.
- Unsuitable extinguishing media** : None known.

Specific hazards arising from the chemical : In a fire or if heated, a pressure increase will occur and the container may burst. Bursting aerosol containers may be propelled from a fire at high speed.

- Hazardous thermal decomposition products** : Decomposition products may include the following materials:
carbon dioxide
carbon monoxide
halogenated compounds
carbonyl halides

Special protective actions for fire-fighters : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

- For non-emergency personnel** : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. In the case of aerosols being ruptured, care should be taken due to the rapid escape of the pressurized contents and propellant. If a large number of containers are ruptured, treat as a bulk material spillage according to the instructions in the clean-up section. Do not touch or walk through spilled material. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
- For emergency responders** : If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
- Environmental precautions** : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Section 6. Accidental release measures

Methods and materials for containment and cleaning up

- Small spill** : Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
- Large spill** : Stop leak if without risk. Move containers from spill area. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

- Protective measures** : Put on appropriate personal protective equipment (see Section 8). Pressurized container: protect from sunlight and do not expose to temperatures exceeding 50°C. Do not pierce or burn, even after use. Do not ingest. Avoid contact with eyes, skin and clothing. Avoid breathing gas. Avoid breathing vapor or mist. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Empty containers retain product residue and can be hazardous.
- Advice on general occupational hygiene** : Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.
- Conditions for safe storage, including any incompatibilities** : Store in accordance with local regulations. Store away from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
trans-dichloroethylene	ACGIH TLV (United States, 3/2015). TWA: 200 ppm 8 hours. TWA: 793 mg/m ³ 8 hours.
ethanol	ACGIH TLV (United States, 3/2015). STEL: 1000 ppm 15 minutes. NIOSH REL (United States, 10/2013). TWA: 1900 mg/m ³ 10 hours. TWA: 1000 ppm 10 hours. OSHA PEL (United States, 2/2013). TWA: 1900 mg/m ³ 8 hours. TWA: 1000 ppm 8 hours. OSHA PEL 1989 (United States, 3/1989). TWA: 1900 mg/m ³ 8 hours. TWA: 1000 ppm 8 hours.

- Appropriate engineering controls** : Use only with adequate ventilation. If user operations generate dust, fumes, gas, vapor or mist, use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Section 8. Exposure controls/personal protection

Environmental exposure controls : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

- Hygiene measures** : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.
- Eye/face protection** : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles.
- Skin protection**
- Hand protection** : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.
- Body protection** : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
- Other skin protection** : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
- Respiratory protection** : Based on the hazard and potential for exposure, select a respirator that meets the appropriate standard or certification. Respirators must be used according to a respiratory protection program to ensure proper fitting, training, and other important aspects of use.

Section 9. Physical and chemical properties

Appearance

- Physical state** : Liquid. [Aerosol.]
- Color** : Clear. Colorless.
- Odor** : Ethereal. [Slight]
- Odor threshold** : Not available.
- pH** : Not available.
- Melting point** : Not available.
- Boiling point** : Not available.
- Flash point** : Not available.
- Evaporation rate** : >1 (butyl acetate = 1)
- Flammability (solid, gas)** : Not available.
- Lower and upper explosive (flammable) limits** : Not available.
- Vapor pressure** : 122.7 kPa (920.45 mm Hg) [room temperature]
- Vapor density** : Not available.
- Relative density** : 1.229
- Solubility** : Not available.
- Solubility in water** : Not available.
- Partition coefficient: n-octanol/water** : Not available.

Section 9. Physical and chemical properties

Auto-ignition temperature : Not available.
Decomposition temperature : Not available.
Viscosity : Not available.
Flow time (ISO 2431) : Not available.

Aerosol product

Type of aerosol : Spray
Heat of combustion : 0.84 kJ/g
Ignition distance : 0 cm
Enclosed space ignition - Time equivalent : 429 s/m³
Enclosed space ignition - Deflagration density : 1781 g/m³

Section 10. Stability and reactivity

Reactivity : No specific test data related to reactivity available for this product or its ingredients.

Chemical stability : The product is stable.

Possibility of hazardous reactions : Under normal conditions of storage and use, hazardous reactions will not occur.

Conditions to avoid : No specific data.

Incompatible materials : No specific data.

Hazardous decomposition products : Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11. Toxicological information

Information on toxicological effects

Acute toxicity

Product/ingredient name	Result	Species	Dose	Exposure
trans-dichloroethylene	LC50 Inhalation Gas. LD50 Dermal	Rat Rabbit	24100 ppm >5 g/kg	4 hours -

Acute toxicity estimates

Route	ATE value
Oral	2744.4 mg/kg

Section 12. Ecological information

Toxicity

Product/ingredient name	Result	Species	Exposure
trans-dichloroethylene	Acute LC50 220000 to 290000 µg/l Fresh water	Daphnia - Daphnia magna	48 hours
ethanol	Acute EC50 17.921 mg/l Marine water	Algae - Ulva pertusa	96 hours
	Acute EC50 2000 µg/l Fresh water	Daphnia - Daphnia magna	48 hours
	Acute LC50 25500 µg/l Marine water	Crustaceans - Artemia franciscana - Larvae	48 hours
	Acute LC50 42000 µg/l Fresh water	Fish - Oncorhynchus mykiss	4 days
	Chronic NOEC 4.995 mg/l Marine water	Algae - Ulva pertusa	96 hours
	Chronic NOEC 100 µl/L Fresh water	Daphnia - Daphnia magna - Neonate	21 days
Chronic NOEC 0.375 µl/L Fresh water	Fish - Gambusia holbrooki - Larvae	12 weeks	

Persistence and degradability

Not available.

Bioaccumulative potential

Product/ingredient name	LogP _{ow}	BCF	Potential
trans-dichloroethylene	2.09	-	low
ethanol	-0.35	-	low

Mobility in soil

Soil/water partition coefficient (K_{oc}) : Not available.

Other adverse effects : No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods

: The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Do not puncture or incinerate container.

United States - RCRA Toxic hazardous waste "U" List

Ingredient	CAS #	Status	Reference number
1,2-Dichloroethylene; Ethene, 1,2-dichloro-, (E)-	156-60-5	Listed	U079

Section 14. Transport information

Section 16. Other information

Hazardous Material Information System (U.S.A.)

Health	*	2
Flammability		2
Physical hazards		0

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks. Although HMIS® ratings are not required on SDSs under 29 CFR 1910.1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

The customer is responsible for determining the PPE code for this material.

Print Date 11/30/2018

SECTION 1. PRODUCT AND COMPANY IDENTIFICATION

Material name : ZEP POWER SOLV II AERO DZ

Material number : 00000000000020301

Manufacturer or supplier's details

Company : Zep Inc.

Address : 350 Joe Frank Harris Parkway, SE
Emerson, GA 30137

Telephone : 404-352-1680

Emergency telephone numbers
For SDS Information : Compliance Services 1-877-428-9937

For a Medical Emergency : 877-541-2016 Toll Free - All Calls Recorded

For a Transportation Emergency : CHEMTREC: 800-424-9300 - All Calls Recorded.
In the District of Columbia 202-483-7616

Recommended use of the chemical and restrictions on use

Recommended use : Degreaser

SECTION 2. HAZARDS IDENTIFICATION
Emergency Overview

Appearance	Aerosol containing a compressed gas
Colour	colourless
Odour	mild

GHS Classification

Gases under pressure : Compressed gas
 Skin irritation : Category 2
 Eye irritation : Category 2A
 Carcinogenicity : Category 1B
 Specific target organ toxicity - single exposure : Category 3 (Central nervous system)

GHS label elements

Hazard pictograms : 

Signal word : Danger

Hazard statements : H280 Contains gas under pressure; may explode if heated.
 H315 Causes skin irritation.
 H319 Causes serious eye irritation.
 H336 May cause drowsiness or dizziness.
 H350 May cause cancer.

ZEP POWER SOLV II AERO DZ

Version 3.1

Revision Date 09/28/2017

Print Date 11/30/2018

Precautionary statements : **Prevention:**
 P201 Obtain special instructions before use.
 P202 Do not handle until all safety precautions have been read and understood.
 P261 Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray.
 P264 Wash skin thoroughly after handling.
 P271 Use only outdoors or in a well-ventilated area.
 P280 Wear protective gloves/ protective clothing/ eye protection/ face protection.
 P210 Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.
 P251 Pressurized container: Do not pierce or burn, even after use.

Response:
 P302 + P352 IF ON SKIN: Wash with plenty of soap and water.
 P304 + P340 + P312 IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER/doctor if you feel unwell.
 P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
 P308 + P313 IF exposed or concerned: Get medical advice/ attention.
 P332 + P313 If skin irritation occurs: Get medical advice/ attention.
 P337 + P313 If eye irritation persists: Get medical advice/ attention.
 P362 Take off contaminated clothing and wash before reuse.

Storage:
 P410 + P403 Protect from sunlight. Store in a well-ventilated place.
 P412 Do not expose to temperatures exceeding 50 °C/ 122 °F.

Disposal:
 Dispose of contents/container in accordance with local regulation.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Substance / Mixture : Mixture

Hazardous components

Chemical name	CAS-No.	Concentration [%]
trichloroethylene	79-01-6	>= 90 - <= 100
carbon dioxide	124-38-9	>= 1 - < 5

The exact percentages of disclosed substances are withheld as trade secrets.

SECTION 4. FIRST AID MEASURES

General advice : Move out of dangerous area.
 Show this safety data sheet to the doctor in attendance.
 Do not leave the victim unattended.

ZEP POWER SOLV II AERO DZ

Version 3.1

Revision Date 09/28/2017

Print Date 11/30/2018

If inhaled	: Remove person to fresh air. If signs/symptoms continue, get medical attention.
In case of skin contact	: If skin irritation persists, call a physician. Wash off immediately with plenty of water for at least 15 minutes. If on clothes, remove clothes.
In case of eye contact	: Remove contact lenses. Protect unharmed eye. Keep eye wide open while rinsing. If eye irritation persists, consult a specialist. Rinse immediately with plenty of water for at least 15 minutes.
If swallowed	: DO NOT induce vomiting unless directed to do so by a physician or poison control center. Keep respiratory tract clear. Never give anything by mouth to an unconscious person. If symptoms persist, call a physician. Take victim immediately to hospital.
Most important symptoms and effects, both acute and delayed	: Effects are immediate and delayed. Symptoms may include blistering, irritation, burns, and pain. Chronic effects are delayed and symptoms may not be observed during an exposure. Effects are dependent on exposure (dose, concentration, contact time). Causes serious eye damage. Suspected of causing cancer. Review section 2 of SDS to see all potential hazards.
Notes to physician	: Treat symptomatically. Symptoms may be delayed.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media	: Dry chemical Water spray jet Alcohol-resistant foam Carbon dioxide (CO ₂)
Unsuitable extinguishing media	: High volume water jet
Specific hazards during firefighting	: Do not allow run-off from fire fighting to enter drains or water courses.
Hazardous combustion products	: Carbon dioxide (CO ₂) Carbon monoxide Smoke Chlorine compounds
Specific extinguishing methods	: Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Further information	: Fire residues and contaminated fire extinguishing water must

ZEP POWER SOLV II AERO DZ

Version 3.1

Revision Date 09/28/2017

Print Date 11/30/2018

be disposed of in accordance with local regulations.
Collect contaminated fire extinguishing water separately. This must not be discharged into drains.
Prevent fire extinguishing water from contaminating surface water or the ground water system.
For safety reasons in case of fire, cans should be stored separately in closed containments.

Special protective equipment for firefighters : Wear self-contained breathing apparatus for firefighting if necessary.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures : Use personal protective equipment.
Ensure adequate ventilation.
Refer to protective measures listed in sections 7 and 8.
Beware of vapours accumulating to form explosive concentrations. Vapours can accumulate in low areas.
Evacuate personnel to safe areas.
Remove all sources of ignition.

Environmental precautions : Prevent product from entering drains.
Prevent further leakage or spillage if safe to do so.
If the product contaminates rivers and lakes or drains inform respective authorities.

Methods and materials for containment and cleaning up : Soak up with inert absorbent material (e.g. sand, silica gel, acid binder, universal binder, sawdust).

SECTION 7. HANDLING AND STORAGE

Advice on safe handling : Avoid exposure - obtain special instructions before use.
Avoid contact with skin and eyes.
For personal protection see section 8.
Smoking, eating and drinking should be prohibited in the application area.
Provide sufficient air exchange and/or exhaust in work rooms.
Always replace cap after use.
Dispose of rinse water in accordance with local and national regulations.
Do not breathe vapours or spray mist.
Take precautionary measures against static discharges.

Conditions for safe storage : BEWARE: Aerosol is pressurized. Keep away from direct sun exposure and temperatures over 50 °C. Do not open by force or throw into fire even after use. Do not spray on flames or red-hot objects.
Observe label precautions.
Keep in a dry, cool and well-ventilated place.
Electrical installations / working materials must comply with the technological safety standards.
No smoking.

Materials to avoid : Oxidizing agents

				end of workweek		
--	--	--	--	--------------------	--	--

Engineering measures : effective ventilation in all processing areas

Personal protective equipment

Respiratory protection : Use respiratory protection unless adequate local exhaust ventilation is provided or exposure assessment demonstrates that exposures are within recommended exposure guidelines.

Hand protection

Material

: Protective gloves

Remarks

: The suitability for a specific workplace should be discussed with the producers of the protective gloves.

Eye protection

: Ensure that eyewash stations and safety showers are close to the workstation location.

Tightly fitting safety goggles

Skin and body protection

: Impervious clothing

Choose body protection according to the amount and concentration of the dangerous substance at the work place.

Hygiene measures

: When using do not eat or drink.

When using do not smoke.

Wash hands before breaks and at the end of workday.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance : Aerosol containing a compressed gas

Colour : colourless

Odour : mild

Odour Threshold : No data available

pH : Not applicable

Melting point/freezing point : Not applicable

Boiling point : 87.22 °C

Flash point :
Not applicable

Evaporation rate : < 1

Flammability (solid, gas) : The product is not flammable.

Upper explosion limit : Not applicable

Lower explosion limit : Not applicable

ZEP POWER SOLV II AERO DZ

Version 3.1

Revision Date 09/28/2017

Print Date 11/30/2018

Vapour pressure	: Not applicable
Relative vapour density	: No data available
Density	: 1.46 g/cm ³
Solubility(ies)	
Water solubility	: insoluble
Solubility in other solvents	: not determined
Partition coefficient: n-octanol/water	: No data available
Auto-ignition temperature	: not determined
Thermal decomposition	: No data available
Viscosity	
Viscosity, kinematic	: No data available
Heat of combustion	: 6.98 kJ/g

SECTION 10. STABILITY AND REACTIVITY

Reactivity	: Stable
Chemical stability	: Stable under normal conditions.
Possibility of hazardous reactions	: Vapours may form explosive mixture with air. No decomposition if stored and applied as directed.
Conditions to avoid	: Heat, flames and sparks. Extremes of temperature and direct sunlight.
Incompatible materials	: Oxidizing agents Light and/or alkaline metals
Hazardous decomposition products	: Carbon monoxide, carbon dioxide and unburned hydrocarbons (smoke). Phosgene Hydrogen chloride gas

SECTION 11. TOXICOLOGICAL INFORMATION**Potential Health Effects**

Aggravated Medical Condition	: None known.
Symptoms of Overexposure	: Effects are immediate and delayed. Symptoms may include blistering, irritation, burns, and pain. Chronic effects are delayed and symptoms may not be

Print Date 11/30/2018

observed during an exposure.
Effects are dependent on exposure (dose, concentration, contact time).

Carcinogenicity:

IARC	Group 1: Carcinogenic to humans	
	trichloroethylene	79-01-6
ACGIH	Suspected human carcinogen	
	trichloroethylene	79-01-6
OSHA	No component of this product present at levels greater than or equal to 0.1% is on OSHA's list of regulated carcinogens.	
NTP	Reasonably anticipated to be a human carcinogen	
	trichloroethylene	79-01-6

Acute toxicity**Product:**

Acute oral toxicity : Acute toxicity estimate : > 5,000 mg/kg
Method: Calculation method

Components:**trichloroethylene:**

Acute oral toxicity : LD50 Oral Rat: 4,920 mg/kg

Acute inhalation toxicity : LC50 Mouse: 8450 ppm
Exposure time: 4 h

Acute dermal toxicity : LD50 Dermal Rabbit: > 20,000 mg/kg

Skin corrosion/irritation**Product:**

Remarks: May cause skin irritation in susceptible persons.

Serious eye damage/eye irritation**Product:**

Remarks: May cause irreversible eye damage.

Respiratory or skin sensitisation

No data available

Germ cell mutagenicity

No data available

Carcinogenicity

No data available

Reproductive toxicity

No data available

STOT - single exposure

No data available

STOT - repeated exposure

No data available

Aspiration toxicity

No data available

Further information**Product:**

Remarks: No data available

Remarks: Symptoms of overexposure may be headache, dizziness, tiredness, nausea and vomiting., Concentrations substantially above the TLV value may cause narcotic effects., Solvents may degrease the skin.

SECTION 12. ECOLOGICAL INFORMATION**Ecotoxicity**

No data available

Persistence and degradability

No data available

Bioaccumulative potential**Product:**

Partition coefficient: n-octanol/water : Remarks: No data available

Components:

trichloroethylene :
Partition coefficient: n-octanol/water : log Pow: 2.29

Mobility in soil

No data available

Other adverse effects

No data available

Product:

Regulation 40 CFR Protection of Environment; Part 82 Protection of Stratospheric Ozone - CAA Section 602 Class I Substances

Remarks This product neither contains, nor was manufactured with a Class I or Class II ODS as defined by the U.S.

ZEP POWER SOLV II AERO DZ

Version 3.1

Revision Date 09/28/2017

Print Date 11/30/2018

Clean Air Act Section 602 (40 CFR 82, Subpt. A, App.A + B).

Additional ecological information : No data available

SECTION 13. DISPOSAL CONSIDERATIONS**Disposal methods**

- Waste from residues : The product should not be allowed to enter drains, water courses or the soil.
Do not contaminate ponds, waterways or ditches with chemical or used container.
Dispose of in accordance with local regulations.
- Contaminated packaging : Empty remaining contents.
Dispose of as unused product.
Do not re-use empty containers.
Do not burn, or use a cutting torch on, the empty drum.

SECTION 14. TRANSPORT INFORMATION

Transportation Regulation: 49 CFR (USA):
ORM-D, CONSUMER COMMODITY

Transportation Regulation: IMDG (Vessel):
UN1950, AEROSOLS, NON-FLAMMABLE, 2.2, - Limited quantity

Transportation Regulation: IATA (Cargo Air):
UN1950, AEROSOLS, NON-FLAMMABLE, 2.2, - Limited quantity

Transportation Regulation: IATA (Passenger Air):
UN1950, AEROSOLS, NON-FLAMMABLE, 2.2, - Limited quantity

Transportation Regulation: TDG (Canada):
UN1950, AEROSOLS, NON-FLAMMABLE, 2.2, - Limited quantity

The product as delivered to the customer conforms to packaging requirements for shipment by road under US Department of Transportation (DOT) regulations. Additional transportation classifications noted above are for reference only, and not a certification or warranty of the suitability of the packaging for shipment under these alternative transport regulations.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: ARCADIS U.S., Inc.
Project/Site: Ford Livonia Transmission Plant

TestAmerica Job ID: 320-16043-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Case Narrative

Client: ARCADIS U.S., Inc.

Laboratory: TestAmerica Sacramento

Narrative

Job Narrative 320-16043-1 Rev (1)

Revision 1

Data was originally reported in ppb v/v units. Client requested units to be revised to ug/m3.

Receipt

The samples were received on 11/19/2015 10:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice.

Air - GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Project Name: Ford LTP
Project #:
Workorder #: 1812015

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/3/2018 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

[REDACTED]

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1812015

Six 6 Liter Summa Canister (100% Certified) samples were received on December 03, 2018. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Dilution was performed on samples IAF-11675Belden-01_112918, IAF-11675Belden-02_112918, IAF-11675Belden-03_112918, IAF-11675Belden-04_112918 and IAF-11675Belden-05_112918 due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project Name: Ford LTP
Project #:
Workorder #: 1904045

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/2/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1904045

Seven 6 Liter Summa Canister (100% Certified) samples were received on April 02, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. All The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #: MI001454.0003 / 30016344
Workorder #: 1907645

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 7/29/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1907645

Six 6 Liter Summa Canister (100% Cert Ambient) samples were received on July 29, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	$\leq 30\%$ RSD with 2 compounds allowed out to <math>< 40\%</math> RSD	$\leq 30\%$ RSD with 4 compounds allowed out to <math>< 40\%</math> RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
- UJ- Non-detected compound associated with low bias in the CCV
- N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates

as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

11/21/2019
Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1911304

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/14/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1911304

Six 1 Liter Summa Canister (100% Certified) samples were received on November 14, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1911413R1

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/18/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1911413R1

Seven 6 Liter Summa Canister (100% Cert Ambient) samples were received on November 18, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Due to laboratory error, the work order was reissued on 11/25/19 to correct the dilution factor used to quantitate results for sample DUP-11675BELDEN-01_111219.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Mr. Jim Tomalia
Arcadis U.S., Inc.
28550 Cabot Dr.
Suite 500
Novi MI 48377

Project Name: Ford LTP
Project #:
Workorder #: 1812016

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/3/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1812016

Six 1 Liter Summa Canister samples were received on December 03, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Workorder #: 1904040

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/2/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1904040

Six 1 Liter Summa Canister (100% Certified) samples were received on April 02, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Arcadis U.S., Inc.
Workorder# 1907642

Seven 1 Liter Summa Canister (100% Certified) samples were received on July 29, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Brandon –

This email serves as the 24-hour notification for an exceedance as it relates to offsite vapor intrusion assessment conducted under the approval letter provided by the MDEQ for the VI RespAP.

Analytical results within a commercial building located at 11675 Belden Court indicated that detections were present for TCE and PCE collected from the sub-slab monitoring points (SSMP) beneath the building. Sub-slab soil gas results for TCE exceeded the soil gas criteria of 130 $\mu\text{g}/\text{m}^3$ in 1 of 6 collected samples. TCE was detected in all 6 of the sub-slab soil vapor samples at concentrations ranging from 34 $\mu\text{g}/\text{m}^3$ to 280 $\mu\text{g}/\text{m}^3$. Tetrachloroethene (PCE) was the only other chlorinated compound detected in sub-slab soil vapor. PCE was detected in 2 of 6 samples at concentrations of 1.5J and 1.6J $\mu\text{g}/\text{m}^3$, which is below the screening level of 2,700 $\mu\text{g}/\text{m}^3$ provided by the MDEQ were noted.

Indoor air analytical results were compared to the *Volatilization to Indoor Air Recommendations of Interim Action Screening Levels and Time Sensitive Interim Action Screening Level* and indicated exceedances for TCE. TCE was detected in all 5 indoor air samples collected with concentrations ranging from 350 to 730 $\mu\text{g}/\text{m}^3$. The Time-Sensitive Recommended Interim Action Screening Level (TRIASL₁₂) for a commercial building for TCE is 12 $\mu\text{g}/\text{m}^3$.

A detailed chemical inventory was completed at the facility. The team identified the use of TCE inside the facility during the processing of asphalt sampling in support of civil engineering work conducted in the building. Based on the documented use of TCE inside the space, MIOSHA standards for indoor air exposure may be more appropriate for use than the RIASLs. In addition, TCE has not been detected in groundwater or soil gas collected near 11675 Belden Court.

Arcadis will be provide a response memo providing additional information for the property, similar to previous submittals. The property owner is being provided the data package, that contained the analytical results.

Thank you

Pictures are provided below.

MASTER LIST
LIVONIA LABORATORY / EQUIPMENT CHEMICALS

Material Codes: I = Irritant, P = Acute Toxic, S = Irritant, W = Water Reactive, C = Carcinogenic (cancer causing), E = Explosive, and T = affects a specific target organ.

Name	Description	Date
SA Red	Red powder, odorless, solid	10/05/15
Alcohol 8101-S-A	Clear volatile-like liquid	06/19/12
Alcohol 8101-S-B	Clear volatile-like liquid	07/02/12
Asbestos	Clear, odorless, viscous liquid, mild like odor	09/27/16
Ascorbic	Light yellow liquid, odorless	12/10/15
Ammonium Carbonate	Colorless crystal or white powder w/ ammonia odor	04/30/14
Asphalt Cement, NF grades	Brown to black liquid, sour tar-like odor	10/02/14
Bentonite Clay	Eye Irrigant/Cryostatine Saline, Bentonite Clay	02/09/15
Benzene	Clear, colorless liquid, sweetish odor, aromatic	12/04/14
BIODACT AE-O	Light yellow liquid with citrus odor	03/09/04
Buffered Eyelet	Clear, colorless, nearly odorless liquid	EXEMPT
Buffer Solutions - pH 4.01	Light red, colorless liquid	05/18/15
Buffer Solutions - pH 7.0	Light yellow, colorless liquid	05/18/15
Buffer Solutions - pH 10.0	Light blue, colorless liquid	05/18/15
Calcium Carbonate	Fine white powder, odorless	05/13/14
Calcium Sulfate, Anhydrous	White granules or powder, odorless	05/05/15
Cesium Chloride	White or gray-white granules, odorless	02/26/14
Chlorobenzene Check Gas (002103)	Colorless, Malodorous Gas	06/24/16
Chlorobenzene Check Gas Mixture (002253)	Colorless, odorless gas mixture	04/19/13
Chlorobenzene Check Gas (Calgas)	Colorless, gas, rotten egg odor	10/03/16
Firefly's Causing Compound	Dark solid with no perceptible odor	06/06/15
Block-Set Molecular Cement Dissolver	Clear, odorless liquid	01/02/17
Durapack Heavy MSDS Cement based Mortar	Gray powder, odorless	03/04/15
Conductivity Standard Solutions	Clear, colorless liquid, odorless	05/21/15
Deionized Water	Clear, odorless liquid, odorless	02/16/15
Indicating ORBITAL	Blue granules, odorless	01/25/17
Evo Sonic Safety Horn	Colorless liquefied gas, slight odor	05/26/15
Empro-AE	Clear liquid, etheral/acetol like odor	02/17/15
Ethyl Alcohol, Deionized	Colorless liquid, mild odor	10/29/14
Evapo-Rust	Yellow liquid, slight odor	03/24/15
Eveready® Alkaline Batteries	Solid Battery	01/01/14
Exel Clean HD Hand Cleaner	Clear, light amber colored liquid, citrus odor	04/09/15
Eucalyptus Solution	Colorless liquid with no discernible odor	07/02/15
Fault Finder Penetrant (discontinued)	Red liquid with aromatic hydrocarbon odor	01/08/03
Fly Ash (Blomhouse coal fly and bottom ash)	Grey/black or brownish powder w/oxidized masses	04/21/15
Granite	Angular particles, salt & pepper colored, brittle	06/01/15
Hydrochloric Acid	Colorless to light yellow liquid, pungent, irritating odor	01/10/17
Instant Ice Pack	Powder contained in pouch	EXEMPT
Lime, Hydrated	White powder	06/04/15
Liquid Hammer	Clear, colorless liquid, faint glycol (burnt sugar) odor	04/04/11
Liquid Spray Developer LDI (Kodak) (discontinued)	White volatile, mobile liquid suspension	07/17/06
Liquinox	Pale yellow liquid, odorless	03/10/16
Magniflex Magnest: Particle SA Red	Reddish brown dusty powder	09/24/14
Marking Paint (Blue)	Color varies, solvent based odor	05/02/16
Marking Paint (Survey)	Color varies, solvent based odor	06/07/15
Mean Sheek® Waterproof Marking Stick	Red, Black, Yellow or White, either or	EXEMPT
Mercury	Silver-white, heavy, mobile, liquid metal	09/20/14
Molykote® 44 High Temp. Bearing Grease, Light	White, slight odor	11/02/16
Nitrogen	Colorless compressed gas	05/26/16
Peel Away ST-1	Blue paste, odorless	03/03/15
Phenolphthalein Solutions 0.1-5.0% in 95% alcohol	Clear, colorless to slight pink liquid	05/01/15
MFG-A Compound (Polymeric MDI)	Dark brown, viscous liquid with slight odor	
Polyether polyol based 8-Component Polymeric MDI	Clear, colorless liquid, odorless to slightly	

Portland Cement	Solid gray, off white, white powder	04/23/15
Potassium Chloride Aqueous Solution, Dilute	Colorless, odorless liquid	05/01/15
Potassium Hydrogen Phthalate	Clear, colorless liquid, no odor	11/24/15
Red Insulating Varnish	Red liquid	10/20/15
Rust-oilium Rust Reformer	Aerosol, liquid, solvent like odor	07/24/15
Sand	Solid, particles of granular mixture	09/01/15
Self-Adhering Rubberized Asphalt Membrane	Black rubberized asphalt on silver aluminum foil, petrol odor	08/11/15
LSP Heavy-Duty Silicone Lubricant	White milky liquid with mild odor	07/02/15
Smoke Tube	Slightly yellowish clear liquid	09/24/13
Sodium Hexametaphosphate	White powder or plates	03/01/15

Brandon -

This email serves as the notification for an exceedance as it relates to offsite vapor intrusion assessment conducted under the approval letter provided by the MDEQ for the VI RespAP.

Analytical results from the commercial property at 11675 Belden Court indicated that TCE was detected in indoor air collected from the property above the *Volatilization to Indoor Air Interim Action Screening Levels and Time Sensitive Interim Action Screening Level*. TCE was detected in all 5 indoor air samples collected with concentrations ranging from 3.8 to 14 $\mu\text{g}/\text{m}^3$. TCE was detected in all sub-slab soil gas samples collected from below the slab, however only one detection exceeded the screening level.

This property was originally sampled in November 2018 and TCE was noted at higher concentrations in the first round of sampling. A detailed chemical inventory was completed at this property and a number of potential sources of VOCs were encountered including products containing TCE. These products were left in place during the first round of sampling but were removed prior to the second round of sampling. This resulted in a noticeable reduction of TCE concentrations in indoor air, however exceedances of the screening level persisted through both rounds.

The property owner was provided the data package (attached), that contains the analytical results.

Brandon –

This email serves as the notification for an exceedance as it relates to offsite vapor intrusion assessment conducted under the approval letter provided by EGLE for the VI RespAP.

Analytical results from the third round of sampling at commercial property at 11675 Belden Court indicated that TCE was detected in indoor air collected from the property above the *Volatilization to Indoor Air Interim Action Screening Level* for non-residential exposures (i.e., RIASL₁₂) of 4 µg/m³. TCE was detected in all 5 indoor air samples collected with concentrations ranging from 4.1 to 5.5 µg/m³. TCE was detected in all sub-slab soil gas samples collected from below the slab, however only one detection exceeded the screening level.

This property was originally sampled in November 2018 and TCE was noted at higher concentrations in the first round of sampling. A detailed chemical inventory was completed at this property and a number of potential sources of VOCs were encountered including products containing TCE. These products were left in place during the first round of sampling but were removed prior to the second and third rounds of sampling. The removal of products containing TCE resulted in a noticeable reduction of TCE concentrations in indoor air, however exceedances of the screening level persist.

The property owner was provided the data package (attached), that contains the analytical results.

Thank you

Brandon –

This email serves as the notification for an exceedance as it relates to offsite vapor intrusion assessment conducted under the approval letter provided by EGLE for the VI RespAP.

Analytical results from the fourth round of sampling at commercial property at 11675 Belden Court indicated that TCE was detected in indoor air collected from the property above the *Volatilization to Indoor Air Interim Action Screening Level* for non-residential exposures (i.e., RIASL₁₂) of 4 µg/m³. TCE was detected in all 6 indoor air samples collected with concentrations ranging from 1.1 to 5.1 µg/m³. TCE was detected in 5 of the 6 sub-slab soil gas samples collected from below the slab, however only one detection exceeded the screening level.

This property was originally sampled in November 2018 and TCE was noted at higher concentrations in the first round of sampling. A detailed chemical inventory was completed at this property and a number of potential sources of VOCs were encountered including products containing TCE, the original notification is attached. These products were left in place during the first round of sampling but were removed prior to the second, third, and fourth rounds of sampling. The removal of products containing TCE has resulted in a continuous reduction of TCE concentrations in indoor air and sub slab soil gas.

The property owner was provided the data package (attached), that contains the analytical results.

Thank you

Project Name: Ford LTP
Project #:
Workorder #: 1812015

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/3/2018 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1812015

Six 6 Liter Summa Canister (100% Certified) samples were received on December 03, 2018. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Dilution was performed on samples IAF-11675Belden-01_112918, IAF-11675Belden-02_112918, IAF-11675Belden-03_112918, IAF-11675Belden-04_112918 and IAF-11675Belden-05_112918 due to the presence of high level target species.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1812015
Sample date: 2018-11-29
Report received by CADENA: 2018-12-10
Initial Data Verification completed by CADENA: 2018-12-10

6 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

12/10/2018

Project Name: Ford LTP
Project #:
Workorder #: 1812016

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 12/3/2018 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1812016

Six 1 Liter Summa Canister samples were received on December 03, 2018. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1812016
Sample date: 2018-11-29
Report received by CADENA: 2018-12-10
Initial Data Verification completed by CADENA: 2018-12-10

6 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

 Ending: 102-0951

DAILY LOG

Project No.: MI001454.0003

Page 1 of 1

Site Location: Livonia, MI 11675 Bellers Ct

Prepared By: Hayden Lohr

Date	Time	Description of Activities
11-21-18		Purpose: Visit 1 - Pkg Survey/Sketch & SSMP Installation (6 total)
		Arcadis: Hayden Lohr, Christian Weaver; GPRS: Evan Soto
		Weather: Cloudy - mid 30s
	0800	Arcadis & GPRS on site
	0805	Site walk through
	0810	Christian begins site sketch
	0815	Hayden conducts interview (DEQ survey form)
	0845	Conduct chemical inventory - Jeff will store chemicals in Radioactive Material Room
		Chemicals will also be stored in chem. closet in warehouse.
	0930	Install SSMP-01 in Warehouse (SW side)
	0945	Install SSMP-02 in Warehouse (W side)
	1000	Install SSMP-03 in Warehouse (N side)
	1010	Install SSMP-04 in office (N side)
	1020	Install SSMP-05 in office closet
	1035	Install SSMP-06, next to printer in office
	1115	Arcadis off site
		<p>Notes - Soil samples will be processed during sampling - high potential for soil off-gassing</p> <ul style="list-style-type: none"> - Large volumes of TCE stored in warehouse - used for asphalt extraction - Chemicals to be stored in Radioactive material room and chemical cabinet - SOIL BORING NOT COMPLETED PER PROPERTY OWNERS REQUEST.

Utilities and Structures Checklist

THIS FORM MUST BE COMPLETED IN ENTIRETY PRIOR TO BEGINNING ANY INTRUSIVE WORK

Project: Ford LTP 11675 Belden
 Project Number: ME 00 2454.0003
 Form Completion Date: 11/21/18 Form Expiration Date: 11/13/18
 (15 business days post form completion date)

Pre-Field Work

Required: One Call or "811" notified 48-72 hours in advance of work? #: NO MISSING NO DTW
 Ticket Expiration Date NA (Review State Requirements)
 Utility companies notified during the One Call process See attached ticket

List any other utilities requiring notification: None

Private Locator Contacted Yes No

Plan private utility clearance subcontractor assignments, areas, required clearance equipment, depth of clearance needed, types of utilities. When possible re-clear 811 markings to confirm utility locations.

Client provided utility maps or "as built" drawings showing utilities? Yes No

Field Work - This must be completed on site, by staff who have a minimum of one year of field experience in identifying utilities. Review Check list with PM or designee prior to beginning intrusive work.

List Soil Boring / Well IDs or Excavation Locations applicable to this clearance checklist:

SSMPs

3 Reliable Lines of Evidence Required Prior to Starting any Subsurface Intrusive Work

- One Call/"811" (Reliable as a line of evidence when working in public right of way or easement)
 Utility Markings Present: Paint Pin flags/stakes Other None
- Client Provided Maps/Drawings **OR** Maps/Drawings requested but not provided
- Client Clearance Name(s)/Affiliation(s)
- Interview(s): Name(s)/Affiliation(s) ~~Stromstein~~ w/ 11/21/18 Jeff / Tenant

Did person(s) interviewed indicate depths of any utilities in the subsurface?
 Yes, depths provided: Did not know or refused to answer
 Additional Comments:

- Site Inspection (Complete Page 2 & Photo Document Marked Utilities & Utility Structures)
- Public Records / Maps / Asbuilts
- Private Locator: (Name and Company) GPRS Evan Soto
- Ground Penetrating Radar (GPR)
- Radiofrequency (RFLoc)
- Electromagnetic (EM)
- Metal Detector

Tips for Successful Utility Location:

1. Don't forget to look up
2. Be on site with Private Utility Locators
3. Ask Private Locators to "confirm" other's markings
4. Select alternate/backup locations during clearance process
5. Mark out all known utilities. Leave nothing to question
6. No hammering - no pickaxes - no digging bars - no shortcutting
7. No excessive turning or downward force of hand augers/shovels
8. Utilities may run in or directly under asphalt/concrete

Soft Dig Methods

- Termination Depth _____ ft. bgs
- Potholing / Vacuum Extraction
- Air-Knife Hydro-Knife
- Probing
- Hand Auguring

Other: _____
 Marine Locator: (Name and Company) _____

Utilities and Structures Checklist

During the site inspection look for the following: ("YES" requires additional investigation and the utility must be marked properly prior to beginning subsurface intrusive work):

Site Inspection	Utility Color Codes	Present	
a) Natural gas line present (evidence of a gas meter)?	Yellow	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
i) Feeder Lines to buildings or homes?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
b) Evidence of electric lines:	Red		
i) Conduits to ground from electric meter or along wall?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iii) Conduits from power poles running into ground?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
ii) Light poles, electric devices with no overhead lines?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iii) Overhead electric lines present? (See Section I)		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
c) Evidence of sewer drains:	Green		
i) Restrooms or kitchen on site?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
ii) Sewer cleanouts present?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
iii) Combined sewer /storm lines or multiple sewer lines?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
d) Evidence of water lines:	Blue		
i) Water meter on site or multiple water lines?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
ii) Fire hydrants in vicinity of work?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
iii) Irrigation systems? (Sprinkler heads, valve boxes, controls in building)		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
e) Evidence of storm drains:	Green		
i) Open curbside or slotted grate storm drains		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
ii) Gutter down spouts going into ground		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
f) Evidence of telecommunication lines:	Orange		
i) Fiber optic warning signs in areas?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iv) Aboveground cable boxes or housings or wires in work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
g) Underground storage tanks:			
i) Tank pit present, tank vent present?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
ii) Product lines running to dispensers/buildings?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
h) Do utilities enter or exit existing structures/buildings?			
If Yes, confirm the utility markings outside of structure/building match up.		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
i) Proposed excavation marked in white?	White	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
j) Unclassed utilities / anomalies marked in pink?	Pink	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
k) Overhead Utilities/Communication Lines - Look Up:			
i) Overhead electrical conduit, pipe chases, cable trays, product lines?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
ii) Overhead fire sprinkler system?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
l) Overhead Power lines in or near the work area:			
i) < 50 kV within 10 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
ii) >50 - 200 kV within 15 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iii) >200-350 kV within 20 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iv) >350-500 kV within 25 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
v) >500-750 kV within 35 ft. or work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
vi) >750-1000 kV within 45 ft. of work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
m) Other:			
i) Evidence of linear asphalt or concrete repair?		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
ii) Evidence of linear ground subsidence or change in vegetation?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iii) Unmarked manholes or valve covers in work area?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
iv) Warning signs ("Call Before you Dig", etc.) on or adjacent to site?		<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
v) Utility color markings not illustrated in this checklist?	i.e. Purple	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No
n) Has the Utilities & Structures Checklist been reviewed by the PM or Designee		<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No

PM or Designee Name: Kris Hinstley

Name and Signature of person completing the checklist:

Date: 11/21/18

Donald Richmond / D. Din

Do not perform mechanized intrusive work within 30 inches of a utility marking without receiving pre-approval by Corporate H&S .

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

Date: 11-21-18 Survey Performed by: Hayden Lahl

1. OCCUPANT:

Rent: Own:

Resident Name: Liz Kritzman

Address: 11675 Belden Ct.

Telephone: Home: _____ Work: (248) 662-2680

How long have you lived at this location? 10 years

List current occupants/occupation below (attach additional pages if necessary):

Age (If under 18)	Sex (M/F)	Occupation
/	/	~ 5 consultants in office at all times

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: Blumenstein First Name: Ricky

Address: Na

City and State: Na

County: Na

Home Phone: Na Office Phone: Na

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): None

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: Commercial-Civil/Env consultants Year Constructed: NA

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/slab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.)

- | | | | |
|-------------|----------|------------------|-------------------|
| Ranch | 2-Family | 3-Family | Raised Ranch |
| Split Level | Colonial | Cape Cod | Contemporary |
| Mobile Home | Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other: <u>NA</u> | |

If multiple units, how many? NA

If the property is commercial:

Business type(s) Civil/Environmental Consultants

Does it include residences (i.e., multi-use)? Yes No If yes, how many? NA

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one)

- | | | | | |
|-----------|--------------|--------|--------------|-----------|
| Full-time | Occasionally | Seldom | Almost Never | <u>NA</u> |
|-----------|--------------|--------|--------------|-----------|

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	NA
1 st Floor	Office / Warehouse (in back)
2 nd Floor	_____
3 rd Floor	_____
4 th Floor	_____

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick).

Cinder block

b. Basement Type: Full Crawlspace Slab Other: _____

c. Basement Floor: Concrete Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered

If covered, what with? NA

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: NA

g. The Basement is: Wet Damp Dry NA

h. The Basement is: Finished Unfinished Partially Finished NA

i. Sump Present (Y/N) If yes, how many? NA

Where Discharged? NA

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

Drains in bathrooms - Some cracks in slab floor in warehouse

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive?

Is a sub-slab vapor/moisture barrier in place? Yes No NA

Type of barrier: unknown

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- | | | |
|---|--|--|
| <input checked="" type="checkbox"/> Hot Air Circulation | <input type="checkbox"/> Heat Pump | <input type="checkbox"/> Hot Water Baseboard |
| <input type="checkbox"/> Space Heaters | <input type="checkbox"/> Steam Radiation | <input type="checkbox"/> Radiant Floor |
| <input type="checkbox"/> Electric Baseboard | <input type="checkbox"/> Wood Stove | <input type="checkbox"/> Outdoor Wood Boiler |
| Other: _____ | | |

The primary type of fuel used is:

- | | | |
|---|-----------------------------------|-----------------------------------|
| <input checked="" type="checkbox"/> Natural Gas | <input type="checkbox"/> Fuel Oil | <input type="checkbox"/> Kerosene |
| <input type="checkbox"/> Electric | <input type="checkbox"/> Propane | <input type="checkbox"/> Solar |
| <input type="checkbox"/> Wood | <input type="checkbox"/> Coal | |

Domestic hot water tank fueled by: Natural gas

Location of Boiler/Furnace: Basement Outdoors Main Floor Other Roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present? Yes No

Is there a whole house fan? Yes No

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

Ductwork in good condition - some new ductwork in rear of building.

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a) Is there an attached garage? Yes No ^{warehouse attached}
- If yes, does it have a separate heating unit? Yes No
- b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car) Yes No
- c) Has the building ever had a fire? Yes No
- d) Is there a fuel burning or unvented gas space heater? Yes No
- e) Is there a workshop or hobby/craft area? Yes No
- If yes, where and what type? Warehouse in rear
- f) Is there smoking in the building? Yes No
- If yes, how frequently? NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
 If yes, when and what type? general purpose cleaning - Asphalt extraction using tri chloroethylene (TCE)
- h) Have cosmetic products been used recently? Yes No
 If yes, when and what type? —
- i) Has there been painting or staining in the last six months? Yes No
 If yes, when and where? —
- j) Is there new carpet, drapes, or other textiles? Yes No
 If yes, when and where? —
- k) Have air fresheners been used recently? Yes No
 If yes, when and what type? Spays in the bathrooms
- l) Is there a kitchen exhaust fan? Yes No
 If yes, where is it vented? —
- m) Is there a clothes dryer? Yes No
 If yes, is it vented outside? Yes No NA
- n) Has there been a pesticide application? Yes No
 If yes, when and what type? In frequent use
- o) Are there odors in the building? Yes No
 If yes, please describe: —

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No

If yes, what types of solvents are used? Tri chloro ethylene for Asphalt extraction

If yes, are their clothes washed at work?

Yes No

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

No Unknown

- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation?

Active Passive NA

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

Fume hood that vents outdoor for Asphalt extraction

t) Is there an irrigation well, or any other well, present at the property:

Yes No

If yes, please describe placement, use, and history below.

Product Inventory Form

i.e. gasoline cans/equipment, kerosene, paints/thinners/strippers, cleaning solvents, hobby supplies (glues), oven cleaner, carpet/upholstery cleaners, household cleaners, moth balls, polishes/waxes, insecticides, furniture/floor polish, hairspray, cologne/perfume, air fresheners, interior fuel tank, wood stove/fireplace, new furniture/upholstery, new carpet/flooring

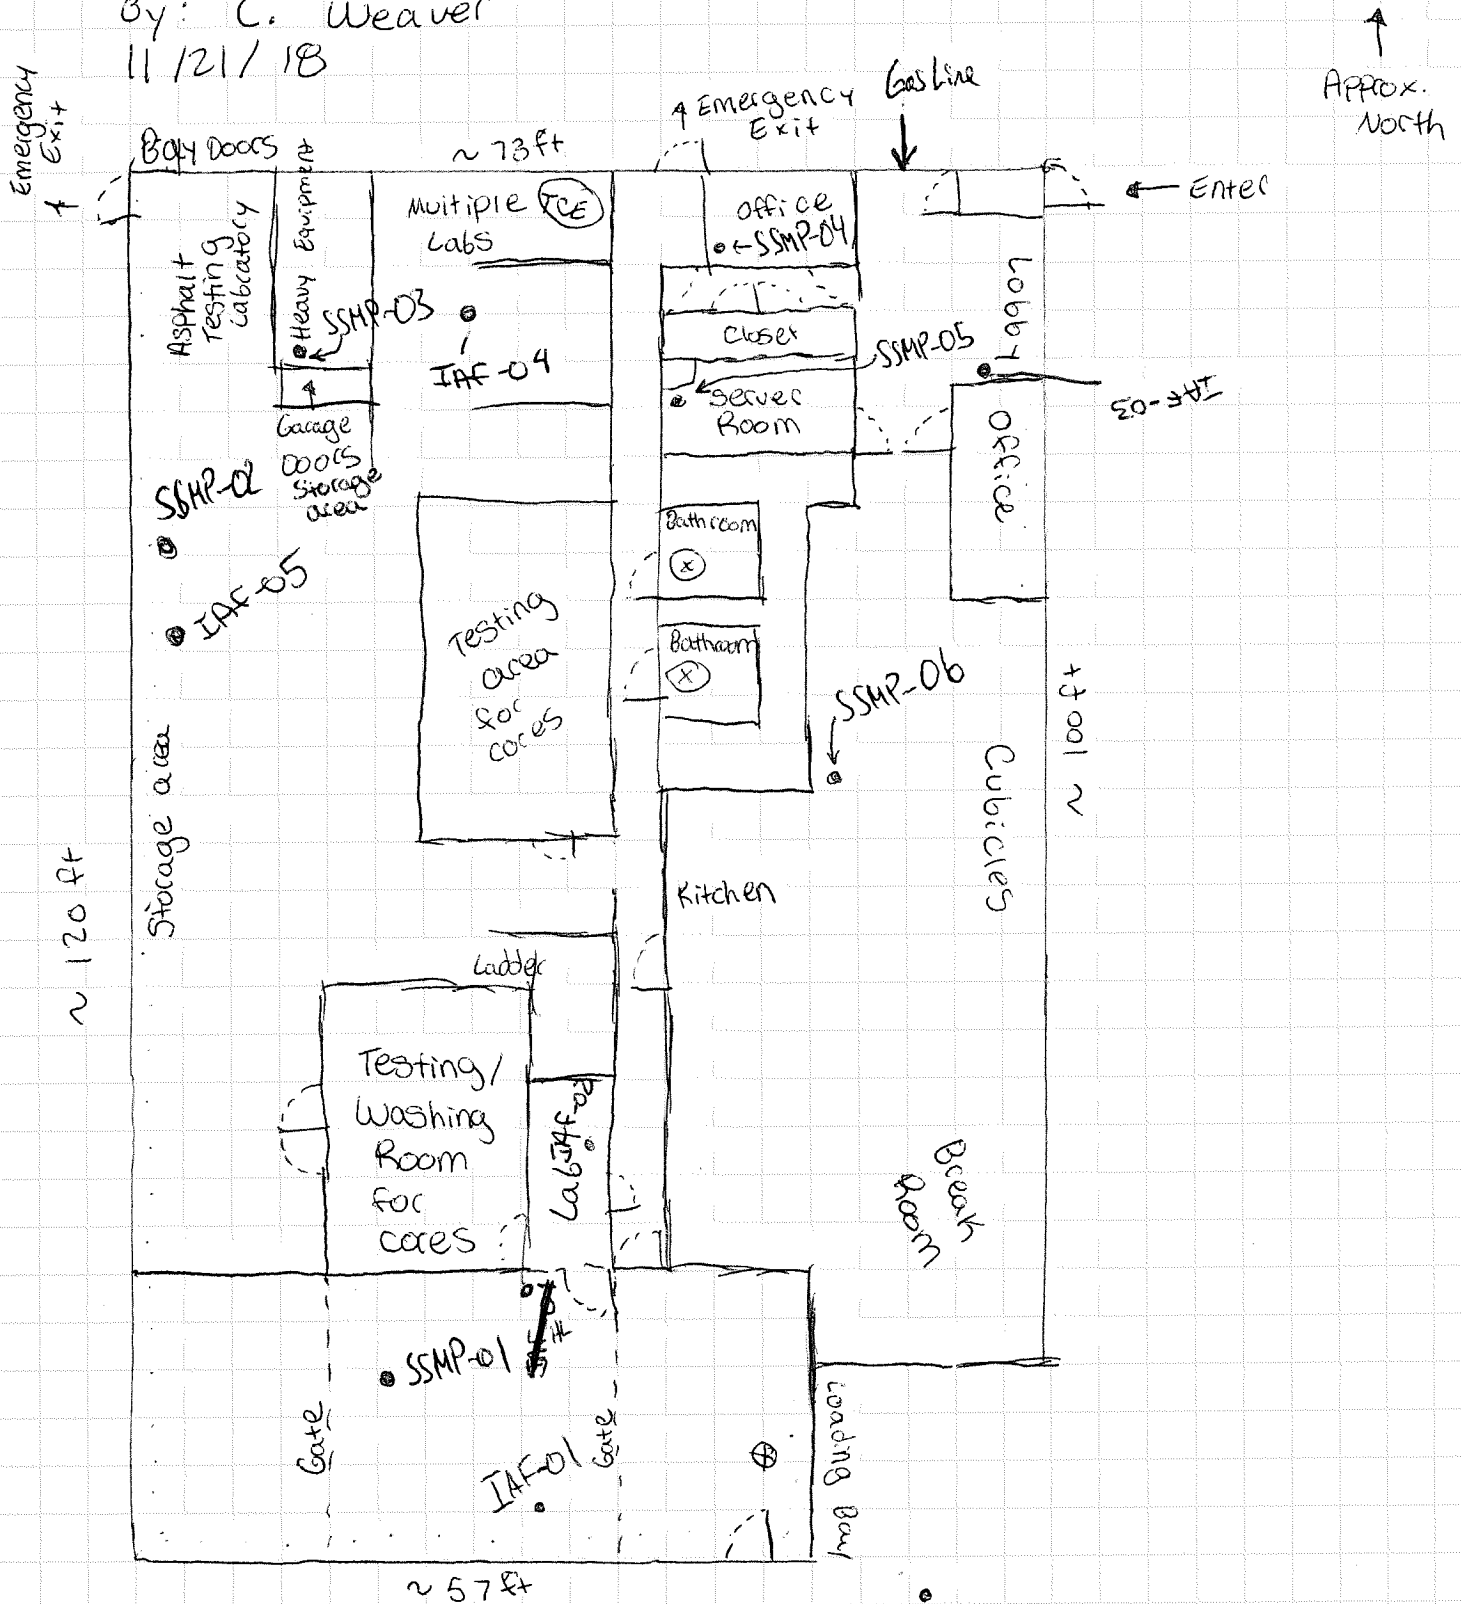

Location	Product Description	Chemical Ingredients	Quantity	PID Reading (ppb)	Photo	Removed (Y/N)

Purge Volume Calculations
 The purge volume for each sample has been pre-calculated using the information below.
 For sub-slab soil vapor samples the sample train tubing length is ~54 inches and the interior piping radius is 0.185".
 Three volumes of the sample train is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius² * height) where volume = 60 ml, radius = 0.185" and height = 54".
 To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sampling point.
 For exterior soil vapor sampling 60 milliliters should be used for the above ground sample train.
 Each additional foot of sub-grade tubing account for approximately 15 ml.
 To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

Project Name: Ford LTP
Project #:
Workorder #: 1904045

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/2/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1904045

Seven 6 Liter Summa Canister (100% Certified) samples were received on April 02, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. All The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1904045
Sample date: 2019-03-28
Report received by CADENA: 2019-04-09
Initial Data Verification completed by CADENA: 2019-04-09

7 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1904045

CADENA Verification Report: 2019-04-09

Review Level: Tier III
Project: MI001454.0003.00001

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1904045 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						TO-15 (Full Scan)	TO-15 (SIM)	MISC
1904045	AA-11675BELDEN-01_032819	1904045-01A	Air	3/28/2019		X

2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes

Novi MI 48377

Project Name: Ford LTP
Project #: MI001454.0003
Workorder #: 1904040

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 4/2/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1904040

Six 1 Liter Summa Canister (100% Certified) samples were received on April 02, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified (0.2 ppbv for compounds reported at 0.5 ppbv and 0.8 ppbv for compounds reported at 2.0 ppbv) may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1904040
Sample date: 2019-03-28
Report received by CADENA: 2019-04-08
Initial Data Verification completed by CADENA: 2019-04-09

6 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1904040

CADENA Verification Report: 2019-04-09

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #32474R
Review Level: Tier III
Project: MI001454.0003.00001

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1904040 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						TO-15 (Full Scan)	TO-15 (SIM)	MISC
1904040	SSMP-11675BELDEN-01_032819	1904040-01A	Air	3/28/2019		X		
	SSMP-11675BELDEN-02_032819	1904040-02A	Air	3/28/2019		X		
	SSMP-11675BELDEN-03_032819	1904040-03A	Air	3/28/2019		X		
	SSMP-11675BELDEN-04_032819	1904040-04A	Air	3/28/2019		X

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

6. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X

Daily Log - Ford Off Site VI Investigation - VISIT 1

Project No.: MI001454.0003 Page 1 of 1
 Site Location: 11675 Belden Livonia, MI
 Prepared By: Nayden Ladd

Date	Time	Description of Activities
3-26-19		Purpose: R2-Visit 1 DEQ Bldg Survey, Chem Inventory, Sump Inspection
		Arcadis: H. Ladd, E. Palmer
		Weather: Sunny - high 30s
		Equipment: PID camera
	1200	Arcadis on Site
	1205	conduct building survey, chemical inventory, check sump points
	1254	Arcadis off site
		Note: All TCE has been removed from site, chemicals will be locked in radioactive storage room. Chlorinated solvent cans will be stored off site in their company vehicle outside.
		HML

Visit 1 Checklist

Background sources of VOCs have been removed/isolated? Yes No NA
 Location of background sources of VOCs that have been removed/isolated: company vehicle
 Sump pit is present? Yes No NA Radioactive storage room

Daily Log - Ford Off Site VI Investigation - VISIT 2 & 3

Project No.: MI001454.0003 Page 4 of 11
 Site Location: 11675 Beiden Livonia, MI
 Prepared By: E. Redner

Date	Time	Description of Activities
3/28/14		Purpose: R2, V2 Deploy canisters collect SSMP samples; V3
		Arcadis: E. Redner / S. Johnson / A. Richmond
		Weather: 44°F cloudy, light mist/rain
		SUNMA cans Equipment: 78 hr (1500 ^{includ}), 6 10-min
	0805	Arcadis on site
	0807	to project ER Deploy canisters, collect SSMP samples, remind occupants to keep windows/doors to outside closed as much as possible
	1025	Arcadis off site
	1500	ARCADIS on site
	1505	collect canisters, collect SSMP data
	1545	Arcadis off site
		<i>E. Redner</i>

Visit 2 & 3 Checklist

Background sources of VOCs have been removed/isolated? Yes No NA

Number of SSMP samples collected: 6

Number of indoor/ambient air samples collected: 78 hr (1500^{includ}), 6 10-min

Occupancy hours (for commercial properties only): 8-5

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM

Date: 11-21-18 Survey Performed by: Hayden Ladd
R2: 3-26-19 Hayden Ladd

1. OCCUPANT:

Rent: Own:
 Resident Name: Liz Kritzman (Paul Newton R2)
 Address: 11675 Belden Ct.
 Telephone: Home: _____ Work: (248) 662-2680
 How long have you lived at this location? 10 years

List current occupants/occupation below (attach additional pages if necessary):

Age (if under 18)	Sex (M/F)	Occupation
/	/	~ 5 consultants in office at all times
/	/	
/	/	
/	/	
/	/	
/	/	

2. OWNER OR LANDLORD: (If same as occupant, check here and go to Item No. 3).

Last Name: Blumenstein First Name: Ricky
 Address: Na
 City and State: Na
 County: Na
 Home Phone: Na Office Phone: Na

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

3. SENSITIVE POPULATION:

Daycare/Nursing Home/Hospital/School/Other (specify): None

4. BUILDING CHARACTERISTICS:

Residential/Multi-family Residential/Office/Strip Mall/Commercial/Industrial/School

Describe Building: Commercial - Civil/Env consultant Year Constructed: NA

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement/crawl space/stab on grade)

Depth of structure below grade: 0 ft. Basement size: 0 ft²

If the property is residential, what type? (Circle all appropriate responses.)

- | | | | |
|-------------|----------|------------------|-------------------|
| Ranch | 2-Family | 3-Family | Raised Ranch |
| Split Level | Colonial | Cape Cod | Contemporary |
| Mobile Home | Duplex | Apartment House | Townhouses/Condos |
| Modular | Log Home | Other: <u>NA</u> | |

If multiple units, how many? NA

If the property is commercial:

Business type(s) Civil/Environmental Consultants

Does it include residences (i.e., multi-use)? Yes No If yes, how many? NA

5. OCCUPANCY:

Is basement/lowest level occupied? (Circle one)

- Full-time Occasionally Seldom Almost Never NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Level	General Use (e.g., family room, bedroom, laundry, workshop, storage)
Basement	NA
1 st Floor	Office / Warehouse (in back)
2 nd Floor	
3 rd Floor	
4 th Floor	

(Use additional page(s) as necessary)

5. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick.)

Center block

b. Basement Type: Full CrawlSpace Slab Other: _____

c. Basement Floor: Concrete Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered

If covered, what with? NA

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: NA

g. The Basement is: Wet Damp Dry NA

h. The Basement is: Finished Unfinished Partially Finished NA

i. Sump Present (Y/N) If yes, how many? NA

Where Discharged? NA

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

Drains in bathrooms - Some cracks in slab floor in warehouse

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive?

Is a sub-slab vapor/moisture barrier in place? Yes No NA

Type of barrier: unknown

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

- | | | |
|---|--|--|
| <input checked="" type="checkbox"/> Hot Air Circulation | <input type="checkbox"/> Heat Pump | <input type="checkbox"/> Hot Water Baseboard |
| <input type="checkbox"/> Space Heaters | <input type="checkbox"/> Steam Radiation | <input type="checkbox"/> Radiant Floor |
| <input type="checkbox"/> Electric Baseboard | <input type="checkbox"/> Wood Stove | <input type="checkbox"/> Outdoor Wood Boiler |
| Other: _____ | | |

The primary type of fuel used is:

- | | | |
|---|-----------------------------------|-----------------------------------|
| <input checked="" type="checkbox"/> Natural Gas | <input type="checkbox"/> Fuel Oil | <input type="checkbox"/> Kerosene |
| <input type="checkbox"/> Electric | <input type="checkbox"/> Propane | <input type="checkbox"/> Solar |
| <input type="checkbox"/> Wood | <input type="checkbox"/> Coal | |

Domestic hot water tank fueled by: Natural gas

Location of Boiler/Furnace: Basement Outdoors Main Floor Other Roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None

Are air distribution ducts present? Yes No

Is there a whole house fan? Yes No

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

Ductwork in good condition - some new ductwork in rear of building. New oven is being installed including new ductwork

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a) Is there an attached garage?

warehouse attached

Yes No ^{HL}

If yes, does it have a separate heating unit?

Yes No

b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car)?

Yes No

c) Has the building ever had a fire?

Yes No

d) Is there a fuel burning or unvented gas space heater?

Yes No

e) Is there a workshop or hobby/craft area?

Yes No

If yes, where and what type? *Warehouse in rear*

f) Is there smoking in the building?

Yes No

If yes, how frequently? *NA*

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
 If yes, when and what type? general purpose cleaning - Asphalt extraction using tri-chloroethylene *TCE is no longer used.*
- h) Have cosmetic products been used recently? Yes No
 If yes, when and what type? --- *(TCE)*
- i) Has there been painting or staining in the last six months? Yes No
 If yes, when and where? ---
- j) Is there new carpet, drapes, or other textiles? Yes No
 If yes, when and where? ---
- k) Have air fresheners been used recently? Yes No
 If yes, when and what type? Spays in the bathrooms
- l) Is there a kitchen exhaust fan? Yes No
 If yes, where is it vented? ---
- m) Is there a clothes dryer? Yes No
 If yes, is it vented outside? Yes No *NA*
- n) Has there been a pesticide application? Yes No
 If yes, when and what type? In frequent use
- o) Are there odors in the building? Yes No
 If yes, please describe: ---

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No

If yes, what types of solvents are used? Tri chloro ethylene for Asphalt extraction. TCE has been removed from site.

If yes, are their clothes washed at work?

Yes No

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

- No
- Unknown
- Yes, use dry-cleaning regularly (weekly)
- Yes, use dry-cleaning infrequently (monthly or less)
- Yes, work at a dry-cleaning service

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation?

Active Passive NA

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

Fume hood that vents outdoor for Asphalt extraction.
Fume hoods are no longer in use as TCE has been permanently removed

t) Is there an irrigation well, or any other well, present at the property:

Yes No

If yes, please describe placement, use, and history below.

Product Inventory Form

i.e. gasoline cans/equipment, kerosene, paints/thinners/stripers, cleaning solvents, hobby supplies (glues), oven cleaner, carpet/upholstery cleaners, household cleaners, moth balls, polishes/waxes, insecticides, furniture/floor polish, hairspray, cologne/perfume, air fresheners, interior fuel tank, wood stove/fireplace, new furniture/upholstery, new carpet/flooring

Date	Time	Temp. (°F)		Relative Humidity (%)	Barometric Pressure (in. Hg)	Source of Weather Information	Purge Volume Calculations: The purge volume for each sample has been pre-calculated using the information below. For sub-slab soil vapor samples the sample train tubing length is ~54 inches and the interior tubing radius is 0.085". Three volumes of the sample train is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius ² * height) where Volume = 60 ml, radius = 0.85" and height = 54". To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sample point. For exterior soil vapor sampling 60 milliliters should be used for the above ground sample train. Each additional foot of sub-grade tubing account for approximately 13 ml. To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

Project Name: Ford LTP
Project #: MI001454.0003 / 30016344
Workorder #: 1907645

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 7/29/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1907645

Six 6 Liter Summa Canister (100% Cert Ambient) samples were received on July 29, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
- UJ- Non-detected compound associated with low bias in the CCV
- N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates

as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1907645
Sample date: 2019-07-24
Report received by CADENA: 2019-08-05
Initial Data Verification completed by CADENA: 2019-08-05

6 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1907645

CADENA Verification Report: 2019-08-05

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #33754R
Review Level: Tier III
Project: MI001454.0004.00002 (30016346)

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1907645 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						TO-15 (Full Scan)	TO-15 (SIM)	MISC
1907645	IAF-11675BELDEN-05_072419	1907645-01A	Air	7/24/2019		X		
	IAF-11675BELDEN-04_072419	1907645-02A	Air	7/24/2019		X		
	IAF-11675BELDEN-03_072419	1907645-03A	Air	7/24/2019		X		
	AA-11675BELDEN-01_072419	1907645-04A	Air	7/24/2019		X		
	IAF-11675BELDEN-01_072419	1907645-05A	Air	7/24/2019		X

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of one times the RL is applied to the difference between the duplicate sample results.

A field duplicate was not performed on a sample location within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD					X
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

%R Percent recovery

RPD Relative percent difference

Workorder #: 1907642

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 7/29/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
EPA Method TO-15
Arcadis U.S., Inc.
Workorder# 1907642

Seven 1 Liter Summa Canister (100% Certified) samples were received on July 29, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: MI001454.0002/3/4.00002/2B/3B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics - Folsom
Laboratory submittal: 1907642
Sample date: 2019-07-24
Report received by CADENA: 2019-08-05
Initial Data Verification completed by CADENA: 2019-08-05

7 Air samples were analyzed for TO-15 parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1907642

CADENA Verification Report: 2019-08-05

Analyses Performed By:
Eurofins Air Toxics
Folsom, California

Report #33753R
Review Level: Tier III
Project: MI001454.0004.00002 (30016346)

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1907642 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

DATA REVIEW

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

DATA REVIEW

All internal standard responses were within control limits.

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of one times the RL is applied to the difference between the duplicate sample results.

Results (in $\mu\text{g}/\text{m}^3$) for the field duplicate samples are summarized in the following table.

Sample ID / Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
SSMP-11675BELDEN-05_072419/ DUP-11675BELDEN-01_072419	Tetrachloroethene	1.9 J	1.6 J	AC
	Trichloroethene	2.8 J	2.7 J	AC

Notes:

AC Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)

3 rd Floor	
4 th Floor	

(Use additional page(s) as necessary)

6. CONSTRUCTION CHARACTERISTICS: (Circle all that apply.)

a. Above Grade Construction: (Describe type: wood frame, concrete, stone, brick)
Conder block

b. Basement Type: Full Crawlspace Slab Other: _____

c. Basement Floor: Concrete Dirt Stone Other: _____

d. Finished Basement Floor: Uncovered Covered
 If covered, what with? NA

e. Foundation Walls: Poured Block Stone Other: _____

f. Foundation Walls: Unsealed Sealed Sealed with: NA

g. The Basement is: Wet Damp Dry NA

h. The Basement is: Finished Unfinished Partially Finished NA

i. Sump Present (N) If yes, how many? NA

Where Discharged? NA

Water in Sump? Yes No Not Applicable

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Identify all potential soil vapor entry points and estimated size (e.g., cracks, utility parts, drains).

Drains in bathrooms - Some cracks in slab floor in warehouse

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes No

Type of ground cover outside of building: Grass Concrete Asphalt Other _____

Is an existing subsurface depressurization (radon) system in place? Yes No

If yes, is it active, or passive?

Is a sub-slab vapor/moisture barrier in place? Yes No NA

Type of barrier: unknown

7. HEATING, VENTING, and AIR CONDITIONING

Type of heating system(s) used in this building: (Circle all that apply: Note the primary).

| <input type="radio"/> Electric Baseboard | <input type="radio"/> Wood Stove | <input type="radio"/> Outdoor Wood Boiler |
| Other: _____ | | |

The primary type of fuel used is:

- | | | |
|--|--------------------------------|--------------------------------|
| <input checked="" type="radio"/> Natural Gas | <input type="radio"/> Fuel Oil | <input type="radio"/> Kerosene |
| <input type="radio"/> Electric | <input type="radio"/> Propane | <input type="radio"/> Solar |
| <input type="radio"/> Wood | <input type="radio"/> Coal | |

Domestic hot water tank fueled by: Natural gas

Location of Boiler/Furnace: Basement Outdoors Main Floor Other Roof

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

Air Conditioning: Central Air Window Units Open Windows None
 Are air distribution ducts present? Yes No
 Is there a whole house fan? Yes No

Describe the air intake system (outside air supply, cold air return, ductwork, etc.) and its condition where visible. Indicate the locations on the floor plan diagram.

Ductwork in good condition - some new ductwork in rear of building. New oven is being installed including new ductwork

B. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a) Is there an attached garage? Yes No ^{warehouse attached}
 If yes, does it have a separate heating unit? Yes No
- b) Are any petroleum-powered machines or vehicles stored in an attached garage (e.g., lawn mower, ATV, car) Yes No
- c) Has the building ever had a fire? Yes No
- d) Is there a fuel burning or unvented gas space heater? Yes No
- e) Is there a workshop or hobby/craft area? Yes No
 If yes, where and what type? Warehouse in rear
- f) Is there smoking in the building? Yes No
 If yes, how frequently? NA

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

- g) Have cleaning products been used recently? Yes No
 If yes, when and what type? general purpose cleaning - Asphalt extraction using trichloroethylene (TCE) is no longer used.
- h) Have cosmetic products been used recently? Yes No
 If yes, when and what type? ---
- i) Has there been painting or staining in the last six months? Yes No
 If yes, when and where? ---
- j) Is there new carpet, drapes, or other textiles? Yes No
 If yes, when and where? ---
- k) Have air fresheners been used recently? Yes No
 If yes, when and what type? Sprays in the bathrooms
- l) Is there a kitchen exhaust fan? Yes No
 If yes, where is it vented? ---
- m) Is there a clothes dryer? Yes No
 If yes, is it vented outside? Yes No NA
- n) Has there been a pesticide application? Yes No
 If yes, when and what type? In frequent use
- o) Are there odors in the building? Yes No
 If yes, please describe: ---

Indoor Air Sampling Procedure Via USEPA Method TO-15

INDOOR AIR BUILDING SURVEY AND SAMPLING FORM (continued)

p) Do any of the building occupants use solvents at work (e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetology)?

Yes No

If yes, what types of solvents are used? Tri chloro ethylene for Asphalt extraction. TCE has been removed from site.

If yes, are their clothes washed at work?

Yes No

q) Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response.)

No Unknown

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

r) Is there a radon mitigation system for the building/structure?

Yes No

If yes, what is date of installation?

Active Passive NA

s) Additional mitigation system information (fan size, location, operating status, liner installed, etc.):

Flame hood that vents outdoor for Asphalt extraction.
Flame hoods are no longer in use as TCE has been
permanently removed

t) Is there an irrigation well, or any other well, present at the property?

Yes No

If yes, please describe placement, use, and history below.

R3 PID in warehouse range 115 ppb - 841 ppb

Generators moved outside

metal flay moved outside to company vehicle

other chemicals stored in tubs in radioactive storage room

Product Inventory Form

i.e. gasoline cans/equipment, kerosene, paints/thinners/strippers, cleaning solvents, hobby supplies (glues), oven cleaner, carpet/upholstery cleaners, household cleaners, moth balls, polishes/waxes, insecticides, furniture/floor polish, hairspray, cologne/perfume, air fresheners, interior fuel tank, wood stove/fireplace, new furniture/upholstery, new carpet/flooring

Date	Time	Temp. (°F)		Relative Humidity (%)	Barometric Pressure (in. Hg)	Source of Weather Information	Purge Volume Calculations: The purge volume for each sample has been pre-calculated using the information below. For sub-slab soil vapor samples the sample train tubing length is ~54 inches and the interior tubing radius is 0.085". Three volumes of the sample train is 60 milliliters using the equation for volume of a cylinder (volume = pi * radius ² * height) where Volume = 60 ml, radius = 0.85" and height = 54". To have sufficient volume to conduct helium leak testing 100 milliliters should be purged from each sample point. For exterior soil vapor sampling 60 milliliters should be used for the above ground sample train. Each additional foot of sub-grade tubing account for approximately 13 ml. To have sufficient volume to conduct helium leak testing at least 100 milliliters should be purged from each sample point.

Project Name: Ford LTP
Project #:
Workorder #: 1911304

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/14/2019 at Air Toxics Ltd.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

Workorder# 1911304

Six 1 Liter Summa Canister (100% Certified) samples were received on November 14, 2019. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

CADENA project ID: E203631
Project: Ford Livonia Transmission Project - OFF-SITE - Soil Gas and Groundwater
Project number: 30016344.0002B
Client project scope reference: Sample COC only was used to define project analytical requirements.
Laboratory: Eurofins Air Toxics -Folsom
Laboratory submittal: 1911304
Sample date: 2019-11-12
Report received by CADENA: 2019-11-21
Initial Data Verification completed: 2019-11-21
6 Air samples were analyzed for TO-15 parameters.

No data qualifications or sample integrity issues were observed.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at <http://clms.cadenaco.com/index.cfm>.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Inc, 1099 Highland Drive, Suite E, Ann Arbor, MI 48108 517-819-0356

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JB	NON-DETECT AT THE CONCENTRATION REPORTED AND ESTIMATED
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
JUB	NON-DETECT AT THE REPORTING LIMIT AND ESTIMATED
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminants) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Ford Motor Company – Livonia Transmission Project

DATA REVIEW

Livonia, Michigan

Volatile Organic Compounds (VOC) TO-15 Analysis

SDG #1911304

CADENA Verification Report: 2019-11-21

Eurofins Air Toxics
Folsom, California

Report #35031R
Review Level: Tier III
Project: 30016344.00006

DATA REVIEW

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # 1911304 for samples collected in association with the Ford – Livonia, Michigan site. The review was conducted as a Tier III validation in addition to a verification/Tier II validation review performed by CADENA Inc. and included review of level IV laboratory data package completeness. Only elements of a Tier III validation effort (Tier III includes a detailed review of laboratory raw data to check for errors in calculation, calibration review, internal standard review and compound identification) and omitted deviations from the CADENA verification/Tier II report are documented in this report. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

SDG	Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis		
						TO-15 (Full Scan)	TO-15 (SIM)	MISC
1911304	SSMP-11675BELDEN-04_111219	1911304-01A	Air	11/12/2019		X		
	SSMP-11675BELDEN-05_111219	1911304-02A	Air	11/12/2019		X

2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of Quality Assurance or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

DATA REVIEW

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method TO-15 (Full Scan). Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers
 - U The analyte was analyzed for but was not detected above the level of the reported sample quantitation limit.
 - B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers
 - E The compound was quantitated above the calibration range.
 - D Concentration is based on a diluted sample analysis.
- Validation Qualifiers
 - J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 - UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UB Analyte considered non-detect at the listed value due to associated blank contamination.
 - N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.
 - R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

DATA REVIEW

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation	Return Canister Pressure
USEPA TO-15	Air	30 days from collection to analysis (Canister)	Ambient Temperature	< -2" Hg

All samples were analyzed within the specified holding time and canister return pressure / vacuum criteria.

2. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

3. Calibration

Satisfactory instrument calibration is established to ensure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

3.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (30%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

All compounds associated with the initial calibrations were within the specified control limits.

3.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (30%) and RRF value greater than control limit (0.05).

All compounds associated with the continuing calibrations were within the specified control limits.

4. Internal Standard Performance

Internal standard performance criteria ensure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than 140% or less than 60% of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

DATA REVIEW

5. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra. All identified compounds met the specified criteria.

6. Field Duplicate Sample Analysis

The field duplicate analysis is used to assess the precision of the field sampling procedures and analytical method. A control limit of 35% for air matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are not greater than five times the RL, a control limit of one times the RL is applied to the difference between the duplicate sample results.

A field duplicate was not performed on a sample location within this SDG.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA REVIEW

DATA VALIDATION CHECKLIST FOR VOCs

VOCs: TO-15 (Full Scan)	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
GAS CHROMATOGRAPHY/MASS SPECTROMETRY (GC/MS)					
Tier II Validation					
Canister return pressure (<-2"Hg)		X		X	
Tier III Validation					
System performance and column resolution		X		X	
Initial calibration %RSDs		X		X	
Continuing calibration RRFs		X		X	
Continuing calibration %Ds		X		X	
Instrument tune and performance check		X		X	
Ion abundance criteria for each instrument used		X		X	
Internal standard		X		X	
Field Duplicate Sample RPD					X
Compound identification and quantitation					
A. Reconstructed ion chromatograms		X		X	
B. Quantitation Reports		X		X	
C. RT of sample compounds within the established RT windows		X		X	
D. Transcription/calculation errors present		X		X	
E. Reporting limits adjusted to reflect sample dilutions		X		X	

Notes:

%RSD Relative standard deviation

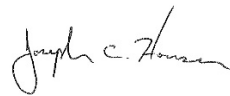

%R Percent recovery

RPD Relative percent difference

%D Percent difference

Project Name: Ford LTP
Project #:
Workorder #: 1911413R1

Dear Mr. Jim Tomalia

The following report includes the data for the above referenced project for sample(s) received on 11/18/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott
Project Manager

LABORATORY NARRATIVE
Modified TO-15
Arcadis U.S., Inc.
Workorder# 1911413R1

Seven 6 Liter Summa Canister (100% Cert Ambient) samples were received on November 18, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the EATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
Initial Calibration	</=30% RSD with 2 compounds allowed out to < 40% RSD	</=30% RSD with 4 compounds allowed out to < 40% RSD
Blank and standards	Zero Air	UHP Nitrogen provides a higher purity gas matrix than zero air

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

Due to laboratory error, the work order was reissued on 11/25/19 to correct the dilution factor used to quantitate results for sample DUP-11675BELDEN-01_111219.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.
- UJ- Non-detected compound associated with low bias in the CCV
- N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

- a-File was requantified
